Paper and paper manufactures imported in 1927 were valued at \$149,365,343 as compared with \$139,499,144 in 1926. Of this amount printing paper standard newsprint, 3,973,724,113 pounds, valued at \$131,488,784, was the principal item. This can be compared with 3,701,350,140 pounds valued at \$123,981,715 in 1926. The largest supply came from Sweden which contributed 3,551,504,615 pounds, valued at \$118,731,001; Newfoundland and Labrador followed with 178,501,904 pounds valued at \$5,820,991, while Sweden ranked third with 135,323,951 pounds valued at \$3,857,801 and Finland fourth with 59,053,098 pounds valued at \$1,678,152. The second largest item of paper and manufactures included cigarette paper, cigarette books and covers which totaled 14,055,107 pounds valued at \$4,291,637, as compared with 8,276,285 pounds valued at \$2,182,583 in 1926. Tissue paper totaled 3,231,208 pounds valued at \$1,836,277, which also represented an increase over 1926. Paper boxes, 2,503,330 pounds and valued at \$1,446,551, were imported as well as pulp boards in rolls, 60,127,790 pounds, valued at \$1,423,111.

The total exports of paper and manufactures from the United States in 1927 amounted in value to \$26,975,670, which was but a slight increase over the previous year, and included such items as newsprint paper, 24,657,313 pounds, valued at \$1,191,033 as against 38,516,147 pounds valued at \$1,849,238 for 1926; and book paper, not coated, 16,040,363 pounds valued at \$1,370,932. Other leading exports of paper and manufactures were: wrapping paper, 32,312,413 pounds, valued at \$2,256,059; tissue and crêpe paper, 4,894,615 pounds valued at \$1,091,531; box board, 43,633,581 pounds valued at \$1,351,016; paper board and straw board, other than bristols and bristol board, 38,554,831 pounds with a valuation of \$2,072,702; wall board of paper or pulp, 45,890,732 pounds, valued at \$1,506,412; paper boxes, 23,660,747 pounds at \$1,627,954; and vulcanized fibre sheets, strips, rods, and tubes, 4,285,038 pounds, valued at \$1,264,366. See CHEMISTRY, INDUSTRIAL.

PAPUA, pā'pū-ā. A territory of the Australian Commonwealth, comprising the southeastern part of the island of New Guinea and all the groups of small islands between 8° and 12° S. latitude and 141° and 155° E. longitude; formerly known as British New Guinea; transferred to the Australian government Sept. 1, 1906. Area, 90,540 square miles, of which about 87,786 are on the island of New Guinea. On June 30,

1926, the population was as follows: Europeans, 1452; Papuans (estimated), 275,000. Port Moresby is the capital and a port of entry. Other ports of entry are Samarai, Daru, and Kula-madau.

A large proportion of the natives are civilized, and many of them are taught in schools maintained by the four Christian missions in the territory. On Dec. 31, 1925, there were 62,981 acres of plantations. The chief crops are coconuts (50,506 acres), rubber (7728 acres); and sisal hemp (3560 acres). The forests contain valuable timber, and the mineral resources, which are considerable, include gold, copper, osmiridium, lead, zinc, tin, and iron. The only minerals exported have been gold, copper, and osmiridium. Indications of petroleum have been found over an area of 1000 square miles, and borings were being continued in 1927 under the auspices of the Australian government. The chief imports are foodstuffs, tobacco, drapery, and hardware; the chief exports are copra, gold, hemp, pearls, and rubber. The exports in 1926 were valued at £685,896 and the imports at £470,774. There is a considerable trade between Australia and Papua, steamship communication being regularly maintained; 129,553 tons entered and cleared in 1926. The local revenue in 1926 was £116,367 and the expenditure, £157,202. The Australian government grants an annual subsidy of £50,000. The territory is administered by a lieutenant-governor appointed by the governor-general of Australia, and an executive and a legislative council, both consisting of official or nominated members. Lieutenant-governor and chief judicial officer in 1927, Sir J. H. P. Murray.

PARAGUAY, pār'a-gwā. An inland republic of South America; bounded on the west and south by Argentina, on the east by Argentina and Brazil, and on the north by Brazil and Bolivia. Capital, Asunción.

AREA AND POPULATION. The estimated area of Paraguay proper, which lies between the Paraguay and Alto Parana rivers, is estimated to be 61,647 square miles; in addition, Paraguay lays claim to a tract between the Paraguay and Pilcomayo rivers known as the Chaco; the ownership of this territory, however, is disputed by Bolivia. In the annual report of the Minister of Finance there was given what was claimed to be the first comprehensive census of population that had been compiled since 1886. This was made by the Department of Agriculture and, according to regions, was as follows:

Eastern part:		Inhabitants
Capital	103,750
Central region	189,708
Paraguari	do.	85,744
Cordillera	do.	101,750
Guaíra	do.	115,419
Encarnación	do.	86,705
Misiones	do.	39,189
Sud	do.	39,682
San Pedro	do.	43,580
Concepción	do.	38,846
Alto Parana	do.	9,148
Total eastern part		791,469
Chaco region (approximate):		
Whites	7,500
Indians	80,000
		87,500
Total for the country		828,969

Inasmuch as the total area of Paraguay was approximately 172,000 square miles, this would give a density of population in eastern Paraguay of about 12 inhabitants per square mile; in the Chaco of less than $\frac{1}{2}$, and in the entire country of about 5 per square mile. In Paraguay proper the people are of mixed blood; namely Guarani, Indian, Spanish, and Negro, the first mentioned predominating. The largest cities with their populations, estimated Sept. 30, 1920, are Asunción, the capital, 99,836; Villarrica, 26,000; Concepción, Luque, and Carapegua, each 15,000; and Encarnación, 12,500.

EDUCATION. According to the annual report of the National Board of Education for 1926, 93,334 pupils were enrolled in the schools of the country. Of this number 65,567, or about 70 per cent, concluded the full year's work and took final examinations. The teaching personnel numbered 2096, consisting of 1587 women and 509 men. Only 703 teachers were listed as normal school graduates. In his message to congress on Apr. 1, 1927, President Ayala stated that the expenditures for education in 1926-27 were fixed at 30,393,994 paper pesos, or an increase of 13,504,534 paper pesos over the amount expended during the year 1924-25.

PRODUCTION, ETC. With an area estimated approximately at 172,000 square miles, a fertile soil, and a healthful and agreeable climate, Paraguay is exceptionally well adapted for the cultivation of most of the products of tropical and subtropical lands.

Many such products are being successfully produced and exported on a large scale. The more important among them, from the standpoint of revenue, are cotton, tobacco, rice and yerba mate.

Other agricultural products cultivated on a sufficiently large scale to have a bearing on the country's economic condition are: Sugar cane, maize, manioc, peanuts, and wheat. Of them, sugar is the most important and the one that gives greatest promise of future expansion. Conditions are also exceptionally favorable for the growing of oranges. Quebracho cutting, exporting of quebracho logs, and production of quebracho extract, together constitute another industry of considerable importance to Paraguay.

Few undertakings have proved more profitable in Paraguay than the breeding of livestock. The number of cattle is unofficially estimated at over 5,000,000. Many ranch owners have been for a number of years importing blooded bulls for breeding purposes. As a consequence, the quality of Paraguayan cattle is noticeably improving.

The mineral resources include iron, manganese, and copper, in deposits of considerable extent. In some sections petroleum is found in commercial quantities. Manufacturing is carried on in Paraguay on only a very small scale. In fact, a large part of it consists only of what might be called cottage industries.

COMMERCE. The total value of Paraguayan exports for the year 1926 was 15,497,504 pesos, the largest amount valued at 11,957,427 pesos having been purchased by Argentina, and the second largest, valued at 1,151,955 pesos by the United States. The total value of imports was 12,205,280 pesos, Argentina leading with 4,099,461 pesos and the United States, England, and Germany following closely with 1,938,409, 1,688,521, and 1,273,568 respectively.

FINANCE. The revenues during the fiscal year 1925-26 amounted to 1,354,000 gold pesos and 178,830,000 paper pesos, while expenditures totaled 1,725,000 gold pesos and 161,677,000 paper pesos, according to the annual report of the Minister of Finance. Converting the gold items at the rate of 42.61 paper pesos to one gold peso, revenue and expenditures in paper totaled 236,518,000 and 235,167,000 pesos, respectively, thus leaving a surplus of 1,351,000 paper pesos.

The chief items of revenue and the amounts of each and a comparison with collections in the year 1924-25, follow:

REVENUES OF PARAGUAYAN REPUBLIC			
Item	1924-25 Paper pesos	1925-26 Paper pesos	
Customs	166,193,291	165,674,956	
Internal taxes	59,755,332	55,145,384	
Posts and telegrams	5,849,393	6,578,317	
Consular fees, sale of land, etc.	5,616,663	5,415,981	
Banco Agrícola and ex- change office	3,510,264	3,695,969	
Internal bond issues	123,713	7,000	
Total	235,048,656	236,517,607	

The public debt of the Republic at the end of the fiscal year 1925-26 amounted to 319,617,000 paper pesos, of which 223,090,000 represented the external debt, 87,368,000 the internal, and 9,153,000 the floating debt.

COMMUNICATIONS. No later figures for communications were available than those for 1924, when 3133 vessels of 229,433 tons entered the port of Asunción and 3106 with a tonnage of 228,366 cleared. The total length of railway mileage was given at 517, the country depending to a great extent upon its navigable rivers, which provide cheap and easy means of transportation.

GOVERNMENT. Executive power is vested in a president who acts through a ministry of five members; and legislative power in a congress of two houses; a senate of 20 members and a house of representatives of 40 members, elected directly by the people. President in 1927, Dr. Eligio Ayala, who assumed office on Aug. 15, 1924.

PARK COLLEGE. A non-sectarian institution of higher learning at Parkville, Mo.; founded in 1875. The enrollment for 1927-28 totaled 523, distributed as follows: seniors, 91; juniors, 68; sophomores, 117; freshmen, 227; special, 7; academy, 13. The faculty numbered 35, of which number, one professor, two associate professors, two instructors, a supervisor of athletics, and an assistant librarian were added during the year. There were 35,000 volumes in the library. The endowment funds of the college amounted to \$1,620,000, and the income for the year was as follows: from endowment, \$78,000; tuition and fees, \$72,600; donations, \$39,360; other sources, \$21,100. President, Frederick William Hawley, D.D., LL.D.

PARKS, NATIONAL. Lands maintained by the United States government, under acts of Congress, for the preservation of their scenic or other unique features, and set apart for the use of tourists and visitors. The 10-years' period completed by the National Park Service in April, 1927, was mainly one of organization and coordination, while it was proposed that the next decade, which began with the tourist season of that year, should be devoted to the

service of the public primarily along recreational and educational lines. The volume of travel to the national parks and monuments during 1927 was the largest that was ever experienced; it is shown in the accompanying table. Appropriations for the national parks and monuments for the fiscal year amounted to \$3,951,183.57, and expenditures to \$3,923,386.30, resulting in a saving of \$27,797.37 for return to the Federal Treasury.

The following tables from the report of the Director of the National Park Service give the number of visitors to the national parks and monuments for the fiscal year 1927:

<i>Name of park</i>	<i>Number of visitors</i>
Hot Springs	*181,523
Yellowstone	200,825
Sequoia	100,684
Yosemite	490,480
General Grant	47,996
Mount Ranier	200,051
Crater Lake	82,354
Platt	*294,954
Wind Cave	81,023
Sullys Hill	221,682
Mesa Verde	11,915
Glacier	41,745
Rocky Mountain	*229,862
Hawaii	*37,551
Lassen Volcanic	20,089
Mount McKinley	651
Grand Canyon	162,356
Lafayette	123,699
Zion	24,303
Total	2,354,643

* Estimated.

<i>Name of monument *</i>	<i>Number of visitors</i>
Aztec Ruin (New Mexico)	7,298
Capulin Mountain (New Mexico)	12,617
Carlsbad Cave (New Mexico)	26,486
Oasa Grande (Arizona)	28,818
Chaco Canyon (New Mexico)	1,500
Colorado (Colorado)	*9,500
Craters of the Moon (Idaho)	5,771
Devil's Tower (Wyoming)	10,400
El Morro (New Mexico)	5,178
Gran Quivira (New Mexico)	2,034
Hovenweep (Utah-Colorado)	*263
Katmai (Alaska)
Montezuma Castle (Arizona)	15,400
Muir Wood (California)	101,514
Natural Bridges (Utah)	82
Navajo (Arizona)	260
Papago Saguaro (Arizona)	*80,540
Petrified Forest (Arizona)	61,761
Pinnacles (California)	11,265
Pipe Spring (Arizona)	16,853
Rainbow Bridge (Utah)	300
Scott's Bluff (Nebraska)	*80,000
Sitka (Alaska)	3,000
Tumacacori (Arizona)	16,761
Verendrye (North Dakota)	*15,000
Wupatki (Arizona)	*450
Yucca House (Colorado)	196
Total	448,197

* Estimated.

* No records for other national monuments.

Through boundary adjustments which increased the area of the Hawaii Park from 186 to 242 square miles and Grand Canyon National Park from 958 to 1009 square miles, the total area of the park system became 11,817 square miles. Progress was made during the year in the plans for the establishment of the Great Smoky Mountains National Park in Tennessee and North Carolina, and the Shenandoah National Park in Virginia. Of the total of \$5,000,000 already pledged towards the ac-

quisition of land for the former, an appropriation of \$2,000,000 was authorized by the State of North Carolina and \$1,500,000 by the State of Tennessee contingent upon the raising of the entire sum necessary to purchase the total necessary acreage. Tennessee also purchased 76,507 acres within the proposed park area. The State of Virginia made considerable progress in surveying and appraising the area within the boundaries of the proposed Shenandoah Park. With the consumption of plans whereby the private and State lands within the Bryce Canyon National Monument, Utah, will pass to the Federal government and the area becomes Utah National Park the area of the national park system will be further increased. The service reports various gifts of land, or funds with which to purchase land, in Lafayette, Zion and Sequoia National Parks, and a considerable total which was donated for museum construction and equipment, archaeological research, roadside clean-up, fish hatchery developments, and other purposes.

The American Association of Museums and a number of scientific organizations cooperated during the year in furthering educational work in the national parks, the museum association securing the appropriation of approximately \$10,000 from the Laura Spelman Rockefeller Memorial for the erection and equipment of an observation station and branch museum at the Grand Canyon National Park. The Hawaii Volcano Research Association donated the new Uwekahuna Observatory and branch museum at the Kilauea Crater in the Hawaii National Park.

The National Park Service participated in two important conferences in 1926 and 1927: The Ninth National Park Conference meeting in Washington in November, 1926, was attended by the superintendents of all the major national parks, general field engineering, landscape, and education officers, and at it measures were adopted for simplifying and coordinating the work of the Bureau; the Pan-Pacific Conference on Education, Reclamation, Rehabilitation, and Recreation, which met in Honolulu in April, 1927, devoted considerable space and attention to exhibits relating to the work and activities of the Bureau.

Considerable interest was evinced in Yellowstone National Park during the summer as the result of the visit of President and Mrs. Coolidge and their son during August, and extensive improvements in camping ground facilities, roads and hotel accommodations for visitors were effected. Following upon the opening of the All-Year Highway to Yosemite National Park in 1926 such unprecedented travel resulted that the traffic situation revealed the necessity for rapid expansion of facilities. An area of approximately 7 square miles in an outlying section of Yosemite was set aside as a perpetual wild-life reserve, to be protected against trespass and maintained in a natural state for scientific study in the future.

PATENTS. See UNITED STATES.

PAVEMENTS. See ROADS AND PAVEMENTS.

PAZ y MELIA, ANTONIO. Spanish archivist, paleographer, and scholar, died in Madrid. He was born in Talavera de la Reina in 1842, and in 1869 he was attached to the staff of the Biblioteca Nacional, in Madrid, where he served for 40 years as chief of the department of

manuscripts and assistant national librarian, until his retirement. He served also as private librarian in the great ducal houses of Alba and Medinaceli, in that of Alba for more than half a century. For Medinaceli he helped in publishing two large and important volumes entitled *Serie de los más importantes documentos del Archivo y Biblioteca del excelentísimo señor Duque de Medinaceli*. For the house of Alba, he helped the late duchess in publishing many of the Columbus documents and others of historical importance belonging in the Alba archives.

PEABODY, FRANCIS WELD. An American physician, died at Cambridge, Mass., October 13. He was born in Cambridge, Mass., on Nov. 24, 1881. He was educated at Harvard and received his medical degree in 1907, and in the following year was appointed assistant resident physician of the Johns Hopkins Hospital. In 1912 he was resident physician, and from 1915 physician of the Peter Bent Brigham Hospital, Boston. In 1926 he became a member of the board of directors of the Rockefeller Institute.

PEABODY MUSEUM OF AMERICAN ARCHAEOLOGY AND ETHNOLOGY. This museum is the anthropological section of the Harvard University Museum; it was founded by George Peabody in 1866. In addition to maintaining collections, it has laboratories for research in the various branches of archaeology, and has at its disposal the income from various funds, permitting special research in the field and the care and increase of the collections of the museum.

There was a notable increase in the number of students making use of the collections in 1927 and in the number of visitors. The library contained nearly 20,000 books and pamphlets, including nearly all of the current anthropological publications of the world.

The activities of the Peabody Museum during the year 1927 were numerous and varied. Prof. A. M. Tozzer and Dr. H. J. Spinden continued their researches in connection with the old civilization of Middle America, the results of their work to appear as Volume VII of the Museum *Memoirs*. S. J. Guernsey's report on the work of the Museum in northeastern Arizona in 1920-23 was nearly ready for publication at the end of the year. C. B. Cosgrove completed the exploration of Swart's Ranch Pueblo in New Mexico which was begun in 1924. Dr. Charles Peabody, Curator of European Archaeology, carried on investigations of archaeological sites in France and forwarded a collection of palaeolithic material secured by him near Clermont. C. S. Coon, under the direction of Dr. F. A. Hooton, Curator of Sematology, spent nine months in the study of the Berbers of Morocco. W. B. Cline spent eight months in archaeological study of the Nile Valley. Dr. George D. Williams carried on investigations among the mixed and full blood Maya in the neighborhood of Chichen Itzá and Mérida.

Several valuable collections were presented to the Museum during the year, including an unusually fine one from the little known Jee-Anim and Marind-Anim tribes of southern Dutch Guiana brought together by Patrick T. L. Putnam during his explorations in that country. Another noteworthy collection was received from Mrs. Charles C. Goodwin which her father Captain William D. Phelps obtained in California

in the summer of 1841. An excellent lot of old material from the natives of the Andaman Islands in the Bay of Bengal was also obtained which illustrates in an unusually complete manner the customs of this interesting people. See *ANTHROPOLOGY*.

PEACE AND PEACE MOVEMENTS. THE BURTON RESOLUTION. Congressman Theodore E. Burton at the opening of the Seventieth U. S. Congress introduced a resolution declaring it to be the policy of the United States to prohibit the exportation of arms, munitions or implements of war to any country which engages in aggressive warfare against any other country in violation of a treaty, convention, or other agreement to resort to arbitration or other peaceful means for the settlement of international controversies. According to its terms, whenever the President determines that any country has violated any such treaty, convention, or agreement by engaging in aggressive warfare against any other country, and makes proclamation thereof, it shall be unlawful, until otherwise proclaimed by the President, or provided by act of Congress, to export any arms, munitions or implements of war from any place in the United States or any possession thereof to such country, or to any other country if the ultimate destination of such arms, munitions or implements of war is the country so violating any such treaty, convention or agreement. Whoever exports any arms, munitions or implements of war in violation of this resolution, shall, upon conviction, be punished by a fine not exceeding \$10,000 or by imprisonment not exceeding two years or both. It was made the duty of the Secretary of the Treasury to report any violation to the United States District Attorney for the district wherein the violation is alleged to have been committed.

CAPPER RESOLUTION. Likewise at the opening session of the Senate Senator Capper of Kansas introduced a joint resolution providing for the renunciation of war as an instrument of national policy and calling for the settlement of international disputes by arbitration or conciliation. The resolution was looked upon by many as the most important step in international relations initiated by a member of Congress since the World War. The full text of the resolution follows:

Whereas the Congress of the United States on August 29, 1916, solemnly declared it "to be the policy of the United States to adjust and settle its international disputes through mediation or arbitration to the end that war may be honorably avoided"; and

Whereas Armand Briand, Minister of Foreign Affairs of the French Republic, on April 6, 1927, publicly declared to the people of the United States that "France would be willing to subscribe publicly with the United States to any mutual engagement tending to outlaw war, to use an American expression, as between these two countries" and proposed that the two countries enter into an engagement providing for the "renunciation of war as an instrument of national policy"; and

Whereas there has been strong expression of opinion from the people and the press of the United States in favor of suitable action by our government to give effect to the proposal of Monsieur Briand; and

Whereas the present arbitration treaty between the United States and France providing for the submission to arbitration of differences of a legal nature arising between them will terminate on February 27, 1928; and

Whereas the United States being desirous of securing peaceful settlement of international disputes and the general renunciation of war as an instrument of policy should not be under obligation to furnish protection for such of its nationals as aid or abet the breach of similar agreements between the other nations;

Now, therefore, be it Resolved by the Senate and House of Representatives of the United States of Amer-

ica in Congress assembled, That it be declared to be the policy of the United States

I. By treaty with France and other like-minded nations formally to renounce war as an instrument of public policy and to adjust and settle its international disputes by mediation, arbitration and conciliation; and

II. By formal declaration to accept the definition of aggressor nation as one which, having agreed to submit international differences to conciliation, arbitration or judicial settlement, begins hostilities without having done so; and

III. By treaty with France and other like-minded nations to declare that the nationals of the contracting governments should not be protected by their governments in giving aid and comfort to an aggressor nation; and

Be it further *Resolved*, that the President be requested to enter into negotiations with France and other like-minded nations for the purpose of concluding treaties with such nations, in furtherance of the declared policy of the United States.

In presenting the resolution Senator Capper said he had done so "to test the sincerity of our professions that America desires world peace. We have talked much about the desirability of peace, but have done little to advance the cause which the people have so much at heart. Nothing further is to be gained by repeating pious platitudes, by uttering high-sounding moral generalities or by professing to be devoted to international peace and opposed to war. The resolution is not a radical or extreme statement of American policy. It has the merit of putting into plain and explicit terms the desire of the American people to advance the cause of peace. It omits meaningless moral generalities concerning the part this nation shall play in the world effort to bring about an area of international understanding and, therefore, peace.

"If M. Briand's proposal be accepted as between the United States and France and offers are made to extend it at once to Great Britain, to Germany, to Japan, and to Italy, the chance of future wars would be reduced to a minimum so long as the other contracting nations keep the faith. As it is obvious that they themselves would not go to war with each other, and by refusing jointly and severally to aid an aggressor nation they would thereby make any war between two lesser nations virtually a local affair.

"Finally there is the desirability and importance of having the United States resume the position of emphatic leadership in all that promotes international peace and understanding, a leadership it took and held under McKinley and Hay, Roosevelt and Root, and Taft and Knox. The adoption of this resolution would place our own government in the position of offering a practicable plan to any other nation of the same mind to put war outside the pale as between itself and the United States.

"Within the next year, in February, June, and August, the treaties of arbitration with France, Great Britain and Japan expire by their own terms. The adoption of this resolution opens the way for treaties in their place renouncing war between these important nations. Here is a vital matter. We have here a great opportunity to live up to our highest American traditions in this resolution to renounce war. We should make the most of it."

VOTING ON WAR. The Hon. Alanson B. Houghton, American Ambassador to the Court of St. James's, in receiving an honorary degree from Harvard in June, advanced the idea of putting the question of going to war, and the ratification of an international conference agreement by

nations not to resort to war against one another for a century, to a vote of the people.

"The time is at hand," said Mr. Houghton in his address, "when a new experiment in democratic control must be made. Those peoples who have demonstrated their competence to govern themselves within their own national frontiers must assume direct responsibility for their relations with each other. Our governments have shown themselves unable to protect us against war. They continue to act along well-defined grooves, and in accordance with the dictates of a political theory which exalts nationalism and relies frankly upon the use of force, when necessary, to attain these ends.

"If the danger of war is to be lessened, a sufficient measure of control, it seems to me, can be obtained only when the self-governing peoples definitely and constitutionally take the decision into their own hands."

Mr. Houghton's propositions, culminating in a dramatic international referendum day, he stated as follows:

First, if so great a political experiment is to be tried, it must be frankly an international experiment. It can not be safely or expediently entered upon by one nation alone. Obviously the experiment would have a greater chance of success if confined at the beginning to those peoples who are most alike in race and ancestry, who possess roughly the same degree of economic and political and educational advancement, accept the same standards of life, respond to the same appeals, and react to the same emotions—in other words, the great self-governing peoples.

Obviously, too, such a proposition can only be brought before them by the consent and with the co-operation of their respective governments. A conference at which each is represented would therefore be a necessary preliminary. Second, the object of such a conference would be, of course, to determine whether each of these governments is prepared by proper legislative action to enable its people to accept or reject a proposition whereby a declaration of war against the other peoples in the group can be made only after the question has received the affirmative sanction of a majority of its qualified electors; and, following this, to enter into an agreement whereby in return for reciprocal pledges, each shall agree not to attack the others for a term of, say, one hundred years.

If, as a result of such a conference, these two propositions can be formulated and accepted, a day should be fixed on which all the peoples so pledged would be given an opportunity to vote for or against ratification, so that by the simultaneous action of the individual electors, in all the great nations involved the full responsibility for that agreement would be dramatically brought home to each, and each be made aware that the issue of peace or war between them will be thereafter in their own hands and control. Into such a conference, it seems to me, the plain people of America would be eager to enter.

INTERNATIONAL GOOD WILL. American coöperation for international good will and universal peace was the objective of the World Alliance for International Friendship through the Churches, an organization which endeavors to enlist, in practical effort, men and women in all parts of the world who desire to assist in the ultimate establishment of universal peace through the development of arbitral, conciliatory, and judicial methods of composing racial and international misunderstandings. Organized in the summer of 1914, the outbreak of the World War made it necessary to delay active efforts during that period.

With the signing of the Armistice in 1918, the work was renewed, and has been prosecuted vigorously from that time. In 1927, 29 active councils had been established in principal nations. It welcomes to its membership, men and women of all religious faiths and political affiliations.

AMERICAN PEACE SOCIETY (Secretary, Arthur D. Call, Colorado Bldg., Washington, D. C.) held its 99th Annual Meeting in Washington, D. C., May 7th, the Hon. Theodore E. Burton presiding. Arrangements were begun for the celebration of the centenary of the society, in May, 1928, in Cleveland, Ohio, at which time the general topic was to be "Our Country's Contribution to the Peace of the World." A history of the Society was to be prepared as a feature and President Coolidge was to be the Honorary Chairman of the Committee of Arrangements. An appeal for an endowment fund of \$50,000 was made during the year. What is known as the "Permanent Peace Fund" established in memory of the Rev. George C. Beckwith, D.D., a former secretary, held its annual meeting in May. Its net income (amounting in 1926-27 to \$7,206.96) is given to the American Peace Society.

WOMEN'S INTERNATIONAL LEAGUE FOR PEACE AND FREEDOM. Jane Addams was the international president and Mrs. William I. Hull, Swarthmore, Pa., president of the United States Branch. At its annual meeting in Cleveland, Ohio, May 1, a series of proposals as to policy were adopted. These dealt first with education and secondly with international organization. Under the latter head, there were declarations about the League of Nations, the Outlawry of War, and Arbitration, all three being endorsed in varying degrees.

WOMEN'S PEACE UNION (headquarters, 39 Pearl St., New York) continued its campaign for the Frazier amendment to outlaw war. To this end it conducted a 15 days' intensive campaign in North Dakota. Hearings on the amendment were held in January, before a subcommittee of the Senate Committee on Judiciary.

THE WORLD ALLIANCE FOR PROMOTING INTERNATIONAL FRIENDSHIP THROUGH THE CHURCHES (The Hon. Sir Willoughby H. Dickinson, Honorary Secretary, 41 Westminster Street, S. W. I., London. See YEAR BOOK, 1926) held a conference of its Management and Administrative Committees at Constance, Switzerland, July 27-29, attended by delegates from the United States, Great Britain, Switzerland, Sweden, France, Germany, Greece, Lithuania, Holland, Estonia, Austria, Poland, Norway, Finland, Czechoslovakia, Canada, and China. The Dean of Worcester (England) presided. The Education Commission recommended (1) that the chief language used in the Report should be English; that a speaker of special qualifications should be invited to speak on this subject at the conference in Prague in 1928; that the American Council of the Alliance be asked to appoint a Committee on Text-books and that their report should be published with that of the commission. The members of the committee were impressed by the value of the Memorandum on *La Paix et les Enfants* submitted to them by Madame Jozequel and by the skill with which it had been drawn up. Its early publication was recommended.

The American Branch, which holds its annual meeting on Armistice Day, conducts forums and public meetings through sundry state and local branches.

THE NATIONAL COUNCIL FOR THE PREVENTION OF WAR (Rennie Smith, Directing Secretary, 39 Victoria St., London, S. W.) is a federation of bodies that are working for peace and against war. It seeks to coördinate, in the first place,

every organization whose primary object is the prevention of war or which is working, as an organization, for peace among the nations. The Council is not an organization limited to one point of view. It includes organized bodies of divergent opinions, but which are united in their hatred of war and their desire to establish a peaceful civilization.

THE NATIONAL COUNCIL FOR PREVENTION OF WAR (Frederick J. Libby, Secretary, Washington, D. C.) celebrated the sixth anniversary of its organization in September as the result of a meeting called by Miss Christina Merriman of the Foreign Policy Association. As a clearing house for a wide constituency of organizations and individuals, the council has published and sold large editions of significant posters, pamphlets, and books.

WOMEN'S INTERNATIONAL LEAGUE (International President, Jane Addams, Chicago; Headquarters U. S. Section, 522 17th Street N. W., Washington, D. C.). The outstanding work during the year concerned arbitration and the action taken at the time of the Mexican crisis. In the fall of 1926 the organization asked Professor Francis B. Sayre of Harvard University to prepare a model arbitration treaty which could be urged on the government to have signed between the United States and all other nations. It was the first one issued in the United States and it was published months before the Shotwell or Bok treaties, which were given such wide publicity in April, following M. Briand's proposal. During the summer petitions calling upon the President to negotiate treaties with all countries, beginning with France and Great Britain, were circulated, and approximately 20,000 signatures were secured. The League coöperated with other peace organizations in a nation-wide effort to prevent the use of armed forces in the Mexican difficulties. Thousand of telegrams and letters sent to the Senate and the White House were the result of the action and organization of the peace groups.

The Nobel Peace Prize for 1927 was awarded at Oslo, Norway, on December 10th to Professor Ludwig Quidde, of Germany, and Professor Ferdinand Buisson of Paris, two outstanding advocates of pacifism. See NOBEL PRIZES. See also ARBITRATION, INTERNATIONAL.

PEACH MOTH, ORIENTAL. See ENTOMOLOGY, ECONOMIC.

PEAY, AUSTIN. Governor of Tennessee, died at Nashville, Tenn., on October 2. Born in Christian County, Ky., June 1, 1876, he was educated in Washington and Lee University, Lexington, Ky. He studied law, was admitted to the bar in 1895 and commenced practice in Charlesville, Tenn. He was elected a member of the Tennessee House of Representatives in 1901, and was chosen chairman of the Democratic State Committee in 1905. First elected as governor in 1922 he at once began a revision of the tax system and the development of highways throughout the State. He was the centre of political storms during his first administration, but won his second nomination by a large majority without making a speaking campaign. In defying the third term precedent he made a speaking campaign, against bitter criticism, but was nominated by a small majority. Governor Peay signed the bill passed in 1925 by the Tennessee Legislature which forbade the

teaching of the theory of evolution in any school which was supported by the public funds of the State.

PELLAGRA. The catastrophe of the Mississippi inundation incidentally called attention to the extensive incidence of pellagra in the flooded area. In this region during the year 1924 the number of cases reported was about 20,000 with 1020 deaths and it is estimated that for 1927 the incidence will be from 45,000 to 50,000 with deaths from 2300 to 2500. The United States Public Health Service devoted to this subject its *Report 42* (September 2 issue), editorial comment on which appears in the *Journal of the American Medical Association* for October 1. The increase was anticipated because under economic stress the poorer classes were forced to subsist largely on a diet consisting chiefly of meal, pork and molasses and it was under this regimen that the disease was most apt to flourish. A vitamin known provisionally as PP is largely sufficient to prevent the development of pellagra and is to be found chiefly in lean meat, fowl, fish, yolks of egg, milk, vegetables and fruit; while the richness in this vitamin of dried and killed yeast makes it possible to prevent and cure the disease by a ration of this substance. According to economists the prevalence of pellagra in this area was the direct consequence of growing only cotton, ignoring dairy, poultry and truck farm crops, the planters contenting themselves with food obtained from the stores which was poor in vitamin PP. See **FOOD AND NUTRITION**, under *Nutrition Investigations*.

PENANG, pē-nāng'. One of the Straits Settlements (q.v.).

PENDL, EMANUEL. Austrian sculptor, died at Vienna, on September 29. He was born in Meran, Austria, on Feb. 23, 1845, and studied under his father at the Academy of Venice and in Vienna. He was a friend of the late Emperor Francis Joseph, of whom he made many huge equestrian statues. His massive figure of Justice in the Palace of Justice, Vienna, was almost destroyed beyond repair by rioters in July 1927. His busts of prominent people are exhibited in several cities of his native land.

PENNSYLVANIA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 8,720,017. The estimated population on July 1, 1927, was 9,730,000. The capital is Harrisburg.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1927	3,090,000	5,085,000 ^a	\$68,592,000
	1926	2,936,000	3,845,000 ^a	70,995,000
Corn	1927	1,270,000	50,165,000	45,650,000
	1926	1,394,000	57,154,000	44,580,000
Potatoes	1927	220,000	26,400,000	31,680,000
	1926	198,000	22,176,000	37,699,000
Wheat, winter	1927	1,090,000	20,165,000	25,610,000
	1926	1,170,000	23,400,000	30,186,000
Oats	1927	1,100,000	39,600,000	21,384,000
	1926	1,111,000	35,552,000	17,420,000
Tobacco	1927	33,000	44,880,000 ^b	5,834,000
	1926	33,000	43,560,000 ^b	4,574,000
Buckwheat	1927	210,000	4,985,000	4,195,000
	1926	190,000	3,610,000	3,213,000
Rye	1927	78,000	1,826,000	1,892,000
	1926	98,000	1,488,000	1,443,000
Apples	1927	6,800,000	8,820,000
	1926	17,900,000	12,960,000

^a tons, ^b pounds.

MINERAL PRODUCTION. The State was the foremost in the Union in 1925 as a mineral producer, and yielded 17.40 per cent of the entire mineral production of the country, in point of value. It led in the production of bituminous coal, was the sole producer of anthracite, and led in coke, pig iron and cement. There were produced in 1926, 84,437,452 short tons of anthracite, as against 61,817,149 tons in 1925; in value, \$474,104,252 in 1926 and in 1925, \$327,664,512. Production of bituminous coal in 1926 was 153,041,038 short tons, in 1925, 136,928,019 tons. The value of this product, for 1926, was \$325,618,000; for 1925 it was \$287,899,000. The number of bituminous mines operating on a commercial scale in 1926 was 1963; in 1925, 1974. (See **COAL**.) Of coke there were produced in 1926 in by-product ovens 11,200,624 short tons, as against 9,853,262 tons in 1925; in value, \$48,722,935 in 1926 and in 1925, \$34,518,863. In addition the beehive coke ovens yielded 9,574,341 short tons of coke in 1925, valued at \$41,875,615; while an exact total of the beehive product for 1926 was not available, the total quantity fell somewhat below that for 1925. (See **COKE**.) The iron ore production of the State continued relatively slight, its mines shipping in 1926, 1,088,034 and in 1925, 917,255 long tons; in value, \$2,483,056 for 1926 and for 1925, \$2,149,800. Blast furnaces of the State, however, produced in 1926 and shipped 13,142,528 long tons of pig iron, as against 12,537,809 tons in 1925; in value, \$263,238,184 in 1926 and in 1925, \$258,140,674. Cement production was 42,865,694 barrels in 1926; in 1925, 42,340,830 barrels. Cement shipments attained a value of \$70,437,218 for 1926; for 1925, of \$72,870,981. Clay products, in 1925, the latest year of available statistics, totaled \$54,369,402; in 1924, \$52,167,366. Natural gas was produced to the quantity of 101,632,000 M cubic feet in 1925, and of 105,863,000 M cubic feet in 1924; in value, \$47,098,000 in 1925 and in 1924, \$45,546,000. Petroleum production was larger than in the years immediately previous, attaining in 1926, 8,942,000 barrels, as against 8,097,000 barrels in 1925; in value, \$34,000,000 in 1926 and in 1925, \$29,310,000. The production of ferro-alloys, a large and growing industry, attained a total quantity of 300,277 long tons in 1925, as compared with 260,623 tons in 1924; in value, \$29,143,978 in 1925 and in 1924, \$24,618,000. Much lime was produced, in 1926 according to estimates, 828,000 short tons, as against 794,951 tons in 1925, in value, \$6,615,000 in 1926 and in 1925, \$6,425,675. The State held first rank as a producer of slate, its primary sales of slate totaling \$5,413,177 in 1926; in 1925, \$5,885,179. It produced also large quantities of stone, sand, and gravel. The total value of the mineral productions in 1925, duplications eliminated, was \$867,196,142; in 1924, \$1,011,630,879.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending May 31, 1926, were \$74,838,315; their rate per capita was \$7.85. They included \$22,310,088 apportioned for education. Totals not included in the above, of \$3,040,478 in interest and of \$44,857,959 in permanent improvement outlays, brought the aggregate of State expenditure to \$122,736,750. Of this, \$52,833,387 was for highways; \$10,887,071 being for maintenance and \$41,946,-

316 for construction. Inter-departmental payments were \$581,770 of all expenditure.

Revenue receipts were \$124,835,966; or per capita, \$13.10. Of their total, property and special taxes yielded 40.3 per cent, attaining a per capita rate of \$5.28. Earnings of departments and compensation paid the State for officials' services furnished 6.9 per cent of revenue; 39.7 per cent was derived from sale of licenses, chiefly on incorporated companies and motor vehicles and from a gasoline sales tax.

Net State indebtedness on May 31, 1926, was \$83,710,906, or \$8.78 per capita. Property subject to ad valorem taxation not being taxed in 1926, no assessed valuation thereon was reported.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927 was 11,330.97. There were built in 1927, as reported by the *Railway Age*, 2.92 miles of first, 5.48 of second and 1.47 of fourth or other track.

EDUCATION. The amount of State subsidies to common schools in 1926-1927 was characterized by Education Superintendent Keith in the *Journal* of the National Education Association as the largest granted in the history of the State. A fund was established to help distressed third and fourth class school districts to rebuild destroyed school buildings or carry out construction in connection with consolidation plans. State research into school conditions and needs was inaugurated. The school population of the State in the scholastic year 1925-1926, including all children between the ages of six and 16 years, was reckoned at 1,919,196. There were enrolled in the public schools 1,849,163 pupils, of whom 1,581,767 were in the elementary schools and 267,396 in the high schools. The expenditures for public school education totaled \$185,408,335. Salaries of teachers averaged \$1451.

CHARITIES AND CORRECTIONS. The State Department of Welfare as organized in 1927 had at its head as Secretary of Welfare, Mrs. E. S. H. McCauley. It included subdivisions charged with child welfare, mental health, the study and treatment of criminals and the assistance of the blind. It had control over 10 state hospitals at Ashland, Blossburg, Coal Dale, Connellsville, Hazleton, Shenandoah, Nanticoke, Philipsburg, Scranton and Shamokin; eight mental hospitals, at Allentown, Danville, Farview, Harrisburg, Norristown, Torrance, Warren and Wernersville; Laurelton State village, Pennhurst State School and Polk State School, for mental defectives; Selinsgrove State Colony for epileptics; 3 correctional institutions, the Pennsylvania Industrial Reformatory at Huntingdon, Penn Training School at Morgantown and State Industrial Home for Women at Moncy; and the 3 State penitentiaries. According to the statistics of the U. S. Department of Commerce patients in the State hospitals for mental diseases on Jan. 1, 1927, numbered 12,118, admittances in 1926 having been 2092; inmates of the penal and reformatory State institutions on Jan. 1, 1927, numbered 4170, admittances in 1926 having been 1531. The City of Philadelphia, December 27, dedicated a new House of Correction at Holmesburg, costing \$1,500,000 and having a capacity of 575 inmates.

LEGISLATION. The State General Assembly convened in regular biennial session January 4, and adjourned April 15. Governor Fisher in his inaugural address opposed the embarkation of

the State in new undertakings and asserted the need of proceeding with highway development, of a budget system and of amendment of the election laws. Bills were enacted permitting the payment of not more than \$4500 a mile for improved township roads under the reward plan; providing for a uniform law on extradition; regulating the issue of building and loan notes; forbidding the marriage of a person of either sex of an age less than 16 years; requiring the registration of engineers and surveyors at an original fee cost of \$20 and a yearly renewal cost of \$1. The Legislature passed, but the governor vetoed, a measure designed to remove double jeopardy from persons liable at once under the Federal and under the State criminal laws: this measure would have rendered it impossible to prosecute criminally in a State court a defendant who had previously been prosecuted for the same act or acts in a United States court. Appropriations for building construction to a total amount of \$12,916,500 were passed. Of this amount the largest item, \$2,103,500, was for insane hospitals, and \$2,000,000 was for normal schools. While no extensive action was taken with regard to penal legislation, a crime commission was created, to study the subject and to report to a later session. A constitutional amendment was passed, to increase the borrowing power of the city of Philadelphia, so that the city might borrow not merely up to 10 but up to 14 per cent of its assessed property valuation, and similarly increasing the borrowing power of counties to 10 per cent, from 7 per cent; the basis of valuation was at the same time changed from "taxable property" to "taxable realty." Passed in the Legislature, the amendment awaited ratification by popular vote in 1928.

Preliminary to popular ratification in 1928 also, was the passage by the Legislature, as by that of 1925, of a proposal to issue \$50,000,000 of State bonds for the purpose of highway construction. There was passed a law, designed to enable the city of Pittsburgh to enforce zoning regulations with regard to buildings, and granting to second class cities the power to regulate height, number, stories and sizes of buildings and to restrict buildings in such areas as might be designated, with regard to their purpose. Many measures to correct election conditions were offered, both in the realm of the election laws and in that of the corrupt practice act. Governor Fisher recommended various changes in the latter, but finally as a substitute, a resolution to create a commission to study the election situation and report to the subsequent session was passed. A bill was also passed to permit the use of voting machines in localities that should so choose. No action was taken as to ratifying the tri-State Delaware River water treaty. Provision was made for State mothers' aid, by a bill carrying an appropriation of \$2,750,000 for this purpose. A banking enactment was sent to the governor, which in the case of insolvency of a private bank rendered the depositors preferred creditors.

POLITICAL AND OTHER EVENTS. The contest of the election of W. S. Vare to the United States Senate in November of 1926, brought by the defeated Democratic candidate, William B. Wilson, led to prolonged court proceedings for the preservation and recount of the ballots. According to the State law these ballots were to be

destroyed September 20. Wilson, acting in concert with the Reed Senate Committee, charged vote frauds in the cities of Philadelphia, Pittsburgh, Scranton, and Wilkes-Barre, and the committee obtained possession of ballots from Philadelphia, and from Alleghany County. Vare finally declared his readiness to cooperate in securing the ballots for the Senate recount, provided that the ballots of all the counties be secured. Court orders issued by the middle of September directed the prothonotaries of all or many of the counties to preserve the ballot boxes for disposal by the Senate. At the November elections the regular Republican candidate for Mayor of Philadelphia, Harry A. Mackey, and all Republican candidates for the Council were elected.

In the Pittsburgh district, the strike of the union bituminous coal miners, begun as in other States on April 1, was not terminated in October. Leading coal mining companies were not disposed to grant terms similar to those under which the strike ended elsewhere, and continued the struggle. The Pittsburgh Coal Company brought action in the Federal District Court September 9 against the United Mine Workers, asking award of damages in the sum of \$1,500,000 and an injunction against interference with operation, which the company intended to carry on under non-union conditions. Federal Judge Schoonmaker granted an injunction to the Pittsburgh Terminal Coal Corporation October 11 forbidding many union activities against the non-union operation of the company, and ordered striking miners to vacate company-owned houses at once. The United Mine Workers made arrangements in October for the temporary housing of 500 striking miners evicted by this company as well as a like number evicted by the Jones and Laughlin Steel Corporation and over a thousand others whose evictions were pending. (See STRIKES AND LOCKOUTS.) On November 14 the explosion of a 5,000,000-cubic-foot gas tank of the Equitable Gas Company in the North Side of Pittsburgh occasioned a serious disaster. Some 28 persons were killed, hundreds injured and houses of an estimated value of \$5,000,000 destroyed. A new Point Bridge, replacing an older structure spanning the Monongahela River at Pittsburgh and costing \$2,079,000, was opened for traffic June 30. The State Supreme Court on June 24 declared professional Sunday baseball unlawful, as a worldly employment forbidden under the terms of an act of 1794.

OFFICERS. Governor, John S. Fisher; Lieutenant-Governor, Arthur H. James; Secretary of State, Charles Johnson; Treasurer, Samuel S. Lewis; Auditor-General, Edward Martin; Attorney-General, Thomas J. Baldrige; Superintendent of Public Instruction, John A. H. Keith.

JUDICIAL. Supreme Court: Chief Justice, Robert von Moschzisker; Judges: Robert S. Frazer, Emory A. Walling, Alexander Simpson, Jr., John W. Kephart, Sylvester B. Sadler, William I. Schaffer.

PENNSYLVANIA, UNIVERSITY OF. A non-sectarian institution of higher education, at Philadelphia, Pa., primarily for men, but with certain courses open to women; founded in 1740. It is composed of the College of Arts and Science; the Towne Scientific School (engineering and chemistry); the Moore School of Electrical Engineering; the Wharton School of Fi-

nance and Commerce; the school of fine arts (architecture, fine arts, music); the school of education; the graduate school and the professional schools of medicine, graduate medicine, law, dentistry, veterinary medicine, and hygiene and public health. The 1927 autumn enrollment was 14,962, including all schools and departments. Of those enrolled 8599 were candidates for degrees; 2750 were candidates for certificates and 3603 were partial students and auditors. The enrollment of the 1927 summer session was 2315. The faculty numbered 1306, an increase of 41 over 1926. The library contained 635,070 bound volumes and 55,000 pamphlets. The productive funds amounted to \$12,204,000, and the income for the year to \$622,000. New additions to the University's buildings during the year included: a new graduate school hospital; an indoor stadium, seating 10,000; a new gymnasium (including swimming pool); and an auditorium, seating 2500.

Among the various gifts and subscriptions received through the University of Pennsylvania Fund were the following: \$250,000 from the Carnegie Foundation, for research in medicine; \$500,000 from Mr. and Mrs. Henry Phipps for the endowment of the Phipps Institute; \$100,000 from Eldridge R. Johnson for the University Museum Building and Endowment Fund; \$100,000 from Mrs. Mary A. Sharpe for the endowment of the Sharpe Memorial Gallery Fund in the Museum. President and Provost, Josiah H. Penniman, Ph.D., Litt.D., LL.D. See **ARCHÆOLOGY**.

PENNSYLVANIA ACADEMY. See **ART EXHIBITIONS**.

PENNSYLVANIA STATE COLLEGE. A non-sectarian, coeducational institution of higher education, at State College, Pa.; founded in 1855. On Sept. 15, 1927, the enrollment totaled 3602, distributed as follows: agriculture, 531; chemistry, 325; education, 496; engineering, 1158; liberal arts, 750; mines and metallurgy, 177; graduate school, 135; specials, etc., 30. There were 2495 students registered in the 1927 summer session. The faculty numbered 525, including the home economics extension staff. The productive funds of the College amounted to \$517,000, and the income for the year to \$3,141,368.89. The library contained 103,212 volumes. A large storage building was completed in October, 1927, and work was started on a \$2,000,000 building programme, providing for the erection of a new infirmary, recreation hall, engineering, chemistry and biological science units, students' union and agricultural building during the biennium 1927-29, in addition to which, a constitutional amendment authorizing an \$8,000,000 bond issue for the erection and equipment of buildings at the College was to be submitted to the voters of Pennsylvania in November, 1928. A grade point system for graduation affecting the seniors of 1927-28 was inaugurated, under which each senior must have earned grade points equivalent to the number of credit hours total in his four years. The president, Ralph D. Hetzel, LL.B., LL.D., was inaugurated on June 14, 1927.

PENSIONS. See **OLD AGE PENSIONS**; and under **UNITED STATES**.

PERAK, pə'rāk'. The most northern of the Federated Malay States (q.v.).

PERKIN MEDAL. See **CHEMISTRY**, **INDUSTRIAL**, under *Medals*.

PERL, FELIX. Polish socialist, died at Warsaw on April 15. He was born at Warsaw in 1871. He was the principal founder of the Polish Socialist party and editor of its organ *Robotnik*. Persecuted by Russia for many years he took refuge in France, England, and America from 1905 to 1908. During the latter years of his life he criticized what he described as the chief evils of Poland—the system known as precautionary imprisonment, or detention without trial or indictment; the suppression of journals out of line with official policies, and the refusal of permits to public meetings of all sorts when held by racial minorities and workers' and peasants' organizations.

PERMANENT COURT OF INTERNATIONAL JUSTICE. See **ARBITRATION, INTERNATIONAL.**

PERRY, THE REV. JAMES DE WOLF, D.D. Presbyterian clergyman, died at Philadelphia, on April 11. He was born at Bristol, R. I., Dec. 22, 1839. After graduating at Brown University he studied at the Berkeley Divinity School, Middletown, Conn. In 1864 he was graduated from the Philadelphia Divinity School of which he was the oldest alumnus at the time of his death. He began his ministry in Providence, R. I., as assistant rector of Grace Church, serving from 1861 to 1862. He then was assistant rector of St. Luke's, Philadelphia. In 1866 he was called as rector of Calvary Church, Germantown, Pa., and continued there for a period of 42 years. For 31 years he was warden and vice president of the Church Training House of Pennsylvania. Dr. Perry was the father of Bishop James De Wolf Perry, Jr., of Rhode Island and was a grand-nephew of Commodore Perry, the hero of the Battle of Lake Erie.

PERSIA. A monarchy of southwestern Asia, extending north from the Persian Gulf and the Gulf of Oman to the Caspian Sea. Capital, Teheran.

AREA AND POPULATION. The area has been variously estimated at from 628,000 to 635,135 square miles; the population at from 8,000,000 to 10,000,000, about 3,000,000 of whom are nomads, among whom Turks, Kurds, Leks, and Arabs predominate. The number of Europeans has been placed at 1200. The population of Teheran has been given at 350,000, but this figure is merely conjectural. Other important cities with their estimated populations are: Tabriz, 180,000; Isfahan, 100,000; Meshed, 85,000; and Resht, 80,000. The great mass of the people are Moslems of the Shiite sect.

EDUCATION. In recent years education has made very rapid strides in Persia, where a new order of things is gradually being worked out. According to the latest available statistics there were 252 government schools, 299 national schools, 108 private schools, 87 foreign schools, 240 religious schools, and 1026 Maktab schools. The above schools provided education for 73,534 boys, 17,485 girls, and 4979 students of religion. The foreign schools are run by missions supported by various denominations throughout the world.

PRODUCTION, ETC. Satisfactory crops were indicated for the year 1926, in sharp contrast to the droughts of 1925 when the importation of large quantities of cereals was necessary to avert a famine. During 1926 there was an abundant water supply throughout the crop season and grains were unusually free from rust and

senn. Difficulty was encountered, however, in marketing the export surplus of agricultural products because of Russia's existing embargo on imports from Persia, thus cutting off Persia's chief market for such products. Cotton production in 1926 was reported to have been much larger than in 1925, and wool production was estimated at 9,810,000 pounds as compared with 6,540,000 pounds in 1925 and 14,887,000 pounds in 1924. The low figure for 1925 wool was the result of inroads made by anthrax during that year. Tobacco production was estimated at 25,500,000 pounds, as against 23,000,000 pounds in 1925.

Production of the Anglo-Persian Oil Co., Ltd., in the fiscal year 1925-26 totaled 4,500,000 tons of crude petroleum, or about 250,000 tons more than in 1924-25. For the first six months of the 1926-27 fiscal year production totaled 2,310,000 tons. Production for the entire year 1926-27 was estimated at 4,750,000 tons. Royalties from oil were estimated at £728,780 for the year 1925-26 and were expected to approximate £975,000 in 1926-27.

Persia's leading industry, the manufacture of rugs, had a satisfactory year. Exports in 1925-26 exceeded those of 1924-25, and preliminary returns for the first six months of 1926-27 indicated still further expansion. However, the gradual reduction of foreign capital in Persia, normally utilized for advances on contracts for rugs, revealed certain unsatisfactory conditions within the industry which may ultimately affect exports. The match factory situated at Tabriz and the spinning factory at Isfahan were reported to have functioned normally in 1926. These two and a woolen mill in Meshed are the only factories in Persia of any importance.

COMMERCE. The foreign trade of Persia for 1925-26 showed an excess of exports over imports considerably less than for the previous year and, if exports of mineral oils be excluded, the balance was unfavorable by approximately \$0,000,000 more than in 1924-25.

FOREIGN TRADE OF PERSIA FOR THE FISCAL YEAR ENDED MARCH 20

Commodity	1925-26	
IMPORTS	Quantity	Value
Cotton textiles metric tons	16,740	\$25,996,900
Sugar do.	63,647	18,810,800
Tea do.	6,501	6,533,700
Wheat, barley, and other alimentation cereals metric tons	34,459	2,554,100
Mineral oils and greases do.	36,058	2,504,800
Cotton yarns do.	2,416	2,213,800
Rice do.	20,608	1,802,800
Silver bars do.	84	1,715,200
Gold and silver coins		2,887,500
Vehicles of all kinds number	4,709	1,618,500
Iron manufactures other than machinery metric tons	7,595	1,576,800
Haberdashery, toys, and household utensils	1,488,700
Machinery, tools and implements metric tons	3,886	1,477,700
Wool textiles do.	309	1,408,000
Flour do.	14,827	1,299,900
Textiles, cotton mixed with artificial silk metric tons	895	1,189,500
Jute and hemp textiles		?
Chemical products metric tons	10,989	969,800
Clothing	903,700
Iron and steel, in ingots, bars, and plates and structural iron metric tons	6,859	692,200
Textiles, wool and cotton mixture metric tons	216	664,600
Cement do.	13,486	595,800
Raw lambskins do.	122	408,800
Drugs, various	406,400
Glassware metric tons	969	293,200

FOREIGN TRADE OF PERSIA FOR THE FISCAL
YEAR ENDED MARCH 20—Continued

* The kran was converted at the rate of 10 to \$1.

* Probably included in "All others."

FINANCE. The conditions of state finances during 1926 was satisfactory. Payments on account of budgetary credits were made promptly, the public debt was further reduced, and there was at all times a good balance in the treasury. The public debt on Dec. 30, 1926, comprised £1,037,036 funded and \$2,038,426 floating. During the quarter ended December 30, there was paid on the funded debt £9452 on account of principal and £23,711 on account of interest charges; and on the floating debt, \$500,000 and \$55,240, respectively. The total resources of the treasury amounted to \$17,167,100 on Dec. 30, 1926. Preliminary returns for the first nine months of 1926-27 were larger than for the corresponding period of 1925-26, amounting to \$22,911,340, as against \$19,711,900. The sugar and tea monopoly revenues show the largest increase for this period, totaling \$4,508,000 and equaling the estimates for the full year, as against \$2,150,000 for the same period of 1925-26. Other increases were noted in the returns from the new road tax and from direct and indirect taxes. Actual collections for the 1925-26 fiscal year totaled \$29,694,850, with estimated expenditures of \$28,996,400. Estimates of revenues for 1927-28 showed little change from those for 1926-27, which were placed at \$35,270,000. A surplus was expected for both 1925-26 and 1926-27.

COMMUNICATIONS. The number of vessels entered and cleared at Persian ports in 1925 was 26,025 as against 25,043 in 1924. The only railway for which information was available was that between Tabriz and Julfa. This road is owned by the Persian government and was received from Russia (which built it during the occupation of 1909-1918) as part compensation for damages done during the World War when Russia and Turkey used Azerbaijan as a battleground. At the close of 1926 the length of this line totaled 276 kilometers. Operating revenues amounted to 3,805,421 krans and other revenues to 34,763 krans; operating expenses were

2,444,392 krans; other expenses are not reported separately. The rolling stock in operation at the close of the year comprised 7 locomotives, 175 freight cars, and 6 passenger cars. The condition of the equipment was considered good. No new rolling stock was purchased during 1926.

Six surveying parties under the direction of American engineers were working during the year along the proposed line of the Trans-Persian railway which will connect Bandar-i-Gaz on the Caspian Sea, with a Persian Gulf port, probably Khour-i-Moussa. The preliminary survey along the Karum River between Moham-marah and Ahwaz had been completed by the end of June. In the northern part of the country one party at the end of October was working east of Teheran. Another party was engaged in a survey of Bandar-i-Gaz harbor. A credit of \$5,000,000 out of the sugar and tea monopoly trust fund was voted by the Parliament for the preliminary work of the Railway Administration. At the end of the year it was reported that work would start immediately on the road-bed north from Ahwaz, west from Teheran in the direction of Kazvin, through which city it has been decided to route the line, and west and south from Bandar-i-Gaz.

GOVERNMENT. Executive power is vested in the Shah, an absolute ruler down to 1906, when he consented to a constitutional form of government or Mejliss. The reigning Shah in 1927 was Riza Khan Pahlevi, publicly proclaimed Dec. 16, 1925. The cabinet as constituted on June 2 is given below under *History*.

HISTORY. Persia passed a comparatively quiet year and seemed to be devoting her entire resources to the building up and development of her country. As noted above under *Communications*, a commission was at work throughout the year planning and surveying a thorough railway system for the state. In the first month of the year the cabinet resigned to prevent a vote of confidence from being taken. The cause of the trouble was the failure of the government to consult the Parliament in connection with further concessions made to the Anglo-Persian Oil Company.

The government, reorganized early in February, had severe difficulty in maintaining a majority in Parliament and was compelled to resign on May 28. A new cabinet was formed on June 2, as follows: Prime Minister, Mehdiqoli Khan Hadayet; Foreign Affairs, Ali Kuli Khan Ansari; Justice, Mirza Mohammed Ali Akbar Khan Daver; Finance, Firuz Mirza Firuz; Interior, Mirza Husain Khan Samy; Education, Mirza Mohammed Tadayyon; War, Jaffar Kuli Assad.

In April the Shah announced that all foreign capitulations would be abolished on May 10, 1928. This announcement brought to an end the custom that had prevailed in Persia for more than a century, by which foreign consulates were represented whenever a legal dispute arose between a national of a foreign country and a Persian. Modern Persia, however, felt that it was perfectly capable of settling any problems that might arise between Persians and citizens of other countries and consequently issued this announcement, having previously sounded out the various diplomatic agents in Persia.

Another sign of the growing independence of the Persian government was the attempt of part of the authorities to curtail the powers of Dr. Arthur C. Millsbaugh, who had been Ameri-

can adviser to Persia since 1922. In his quarterly reports he had shown how the country had progressed since that time economically, socially, and politically. The expenditures on education, public works, and health had more than doubled and the trend of the times was notably reflected in the improvements noticeable in the country. With the coming of the new Shah (see YEAR BOOK for 1925), there was a strong demand that Dr. Millspaugh's powers be curtailed. His contract expired in September, 1927, and he refused to renew it because of the curtailment of his powers by the government. The Prime Minister assumed the duties of the Administrator-General of Finances until a successor to Dr. Millspaugh could be appointed.

A long outstanding dispute with Russia was settled in the autumn, by the signing of a pact of neutrality and non-aggression between the two countries. Each government promised to refrain from sending armed forces into the territory of the other and also agreed to remain neutral if either country was attacked by a third power. The chief bone of contention between the two countries, the Caspian Sea fisheries, was disposed of by a 25-year agreement to work the fisheries jointly by means of a company under a Persian chairman. The settlement of this dispute was expected to bring about a revival of Persian trade, largely because its settlement brought about a lifting of the embargo on Persian goods destined to cross the Russian frontier.

PERSIAN LITERATURE. See PHILLOGY, MODERN.

PERU, pē-rōō'. A republic on the Pacific coast of South America; bounded on the north by Ecuador and Colombia; on the east by Brazil and Bolivia; and on the south by Bolivia and Chile. Capital, Lima.

AREA AND POPULATION. On the basis of an estimate by the Lima Geographical Society in 1916, the total area, including Tacna, is 532,047 square miles. The last official census was in 1876, when the population was fixed at 2,660,881; an estimate in 1896 placed it at 4,634,601; another in 1921 placed it at about 5,500,000, although grave doubts were expressed in some quarters as to whether the population was increasing at all. The above figures do not include an indeterminate number of uncivilized Indians. The capital, Lima, according to the official census of Dec. 17, 1921, had 176,467 inhabitants. The estimated population of the principal cities in 1924 was as follows: Lima, 187,000, with suburbs, 220,000; Callao, 58,500; Arequipa, 50,000; Cuzco, 28,000; Ica, Trujillo, and Chiclayo, 25,000 each.

EDUCATION. The number of schools offering primary instruction in 1925 was 826, with 1465 teachers. The enrollment in these was 49,749, with an average daily attendance of 33,675. In view of the success obtained with the traveling schools, the number of these was increased to 30, and their field of operation was extended to include the provinces of La Paz, Chaltenango, and Morazan. The number of national secondary schools which were in operation was 28, 3 of these being for girls. Six normal schools were in session, and of these 3 were of higher grade. For higher education there is the central university at Lima.

PRODUCTION, ETC. Sugar, cotton, and coffee form the principal agricultural products. The sugar industry, which is first in importance, is

engaged in chiefly in the coastal region, 134,000 acres being devoted to the cultivation of cane in 1925, and the production 269,760 tons. The cultivation of cacao was extending, and other products were wheat, corn, ramie, tobacco, wines, and olives. Hides, wool, and skins are important articles of export. Dyes, with cinchona and other medicinal plants, contribute to the country's wealth; and the manufacture of cocaine is carried on in several towns to some extent.

The value of Peru's mineral production in 1926 increased 24 per cent over that for the preceding year, a significant gain when it is considered that the economic condition of the world's metal markets was less favorable than in 1925. A weight increase of 19.7 per cent, in contrast to the value increase of 24 per cent, is revealed by the following table, which shows total extraction that could be used or was of value, according to final figures for 1925 and preliminary for 1926:

MINERAL PRODUCTION OF PERU

Product	1925 Kilos	1926 Kilos
Metallic minerals:		
Gold	3,604	3,740
Silver	663,646	669,671
Copper	36,844,210	42,510,952
Lead	16,573,764	20,541,094
Zinc	14,417,654	21,629,023
Vanadium	245,829	858,327
Antimony	17,020	99,004
Arsenic	119,287
Tungsten	5,439
Quarry products:		
Quartzite	21,861,000	19,255,000
Limestone	74,000,000	77,000,000
Lime, live or dead	5,330,000	5,544,200
Cement	11,278,000	29,295,000
Gypsum	14,644,000	16,823,460

COMMERCE. Foreign trade for 1926, exclusive of that through Iquitos and by parcel post, amounted to \$41,767,167, as against \$38,294,019 in 1925. The total exports amounted to \$23,966,249, as against \$21,648,745 in 1925, or an increase of \$2,317,504 for 1926. The volume of exports in 1926 was 1,739,253 tons, against 1,306,102 tons in 1925, the increases showing in almost all the principal exports. Increases in mineral ores and concentrates show new activities in zinc and copper mining in the northern part of the Republic, these exports combined in 1926 being 60,459 tons, worth \$1,430,353, as against 21,812 tons in 1925 valued at \$745,428.

The principal exports of 1926 compared with those of 1925 are as follows:

Product	1925 Tons	1926 Tons
Petroleum	951,412	1,198,756
Cotton	89,903	48,981
Copper with gold and silver	36,799	39,742
Mineral ores	14,883	34,855
Sugar	208,140	829,794
Mineral concentrates	6,929	25,794

Imports amounted in 1926 to 607,324 tons, worth \$18,235,601, against 550,181 tons worth \$17,075,311 in 1925. The customs receipts for 1926 amounted to \$2,803,700, against \$2,862,746 in 1925. The decrease in revenue on exports was due to the low prices of cotton and sugar which prevailed throughout the year.

FINANCE. The budget for 1926-27 at \$10,371,542. A law passed during the summer, authorized the chief executive to issue bonds up

to the amount of £P5,000,000 or the equivalent in United States currency, guaranteed by the proceeds from the tobacco monopoly. The bonds were to be issued in series, the amount of each series to be determined by the president. Both the principal and interest on these bonds will be payable in London or New York. The bonds shall not be issued for less than 90 per cent of the nominal value, or with an interest above 7 per cent a year, with accumulative amortization of not more than 1 per cent annually. These bonds will be exempt from all taxes. The proceeds of this loan will be used, among other things, for purchasing a site to establish a cigar and cigarette factory and buying the necessary machinery for equipping the factory, for the construction of railroads, and for carrying on sanitation and irrigation works commenced.

COMMUNICATIONS. At Callao there entered in the foreign trade in 1925, 743 steamers of 2,413,344 tons, and cleared 756 of 2,456,541 tons. The total working length of Peruvian railways is 2081 miles, of which 1486 miles belong to the state. A 5-mile relocation in the Central Railway of Peru, completed in 1926, was made necessary by floods and avalanches which washed out bridges and obliterated a stretch of the original line about 45 miles from the coast.

GOVERNMENT. Executive power is vested in a president elected for five years and eligible for a succeeding term; and legislative power in the congress consisting of a senate with 35 members and a house of representatives with 110 members. The president acts through a cabinet of seven, appointed and removed at his pleasure. President in 1927, Augusto B. Leguia.

HISTORY. The high lights of Peruvian foreign affairs as gleaned from President Leguia's address in midsummer to congress were reported as follows: The work of the boundary commissions, charged with the delimitation of the boundaries between Peru and Bolivia and Peru and Brazil, was being actively prosecuted. The studies for the railway which will connect the railroad systems of Peru and Bolivia, to the north of Lake Titicaca, were being continued steadily. On July 28, the ratifications were exchanged of the Treaty on Compulsory Arbitration entered into between Brazil and Peru. The Chief Executive again recommended the Peruvian-Colombian Boundary Treaty to the attention of Congress and declared that the policy of his administration aimed to determine with precision the boundaries of the Republic. For a discussion of the Tacna-Arica dispute, consult the article on **ARBITRATION, INTERNATIONAL**.

A significant change occurred in the Peruvian constitution during the year, when it was amended to permit the reelection of the President without any restrictions. It seemed to be the consensus of opinion that the purpose of this amendment was to continue President Leguia in office indefinitely. He was elected in 1919 and reelected in 1924. According to the constitution he could be reelected only once. The change, however, permitted him to run as often as he had the confidence of the people. To many Peruvians President Leguia embodied the personification of a nationally conscious Peru, one which would stand up for its rights and compel respect on the part of other nations. He was hailed as a Mussolini-like savior of the country. Doubtlessly his strong stand on the Tacna-Arica question had endeared him in

the hearts of his countrymen. His advocacy of a strong navy toward the end of the year seemed to inaugurate a new era for the country in the family of nations.

PETROLEUM. In 1927 world production of petroleum was estimated at 1,254,145,000 barrels, an increase of 156,000,000 barrels over the 1926 figure of 1,098,389,000 barrels, according to preliminary figures of the U. S. Bureau of Mines. Large increases in production were recorded by the United States, Russia, Venezuela, Persia, Rumania, and Colombia, but Mexico, on the other hand, showed a decline of 26,000,000 barrels.

The estimated production of the various countries, as compared with 1926, is shown in the following table:

Country	Barrels (thousands)	
	1927	1926
United States	905,800	770,874
Russia	72,400	64,311
Venezuela	64,400	37,226
Mexico	64,200	90,421
Persia	36,800	25,842
Rumania	26,100	22,314
Netherlands E. Indies	21,400	21,242
Colombia	14,800	6,444
Peru	9,800	10,782
Argentina	8,700	7,952
British India	8,200	8,728
Poland	5,800	5,844
Trinidad	5,200	5,278
Sarawak	5,000	4,942
Japan and Formosa	1,700	1,900
Egypt	1,270	1,888
Germany	700	653
France	525	478
Canada	500	364
Ecuador	450	214
Sakhalin	200	181
Czecho-Slovakia	140	150
Italy	60	48
Others	200	33
Total	1,254,145	1,098,389

In the United States the total production of crude petroleum in 1927 was estimated by the United States Bureau of Mines at 894,435,000 barrels as compared with 770,874,000 barrels, the final figures for 1926. There were decreases in production in Arkansas, Kansas, Louisiana, Montana, and Wyoming, but notable gains in California, Oklahoma, and Texas.

The preliminary figures of the United States Bureau of Mines for 1927 are given in the accompanying table together with the final figures for the year 1926.

The total output of petroleum in Mexico in 1927 was stated at 64,119,884 barrels against 90,609,991 barrels in 1926. In 1927 according to statistics of the Mexican Petroleum Bureau, 804 drilling permits were issued and during the year 204 productive wells were brought in with a total initial daily capacity of 383,702 barrels.

The petroleum export trade of Soviet Russia for 1927 was stated at 2,135,000 metric tons, which was a new record for that country. The production, given at 10,413,000 metric tons, was said to be the heaviest in 25 years, and was more than double the 1913 output and 18.4 per cent greater than in 1926. In 1927 the oil exports were more than double those of the last pre-war year.

The total value of petroleum and products exported from the United States in 1927 was \$486,143,157, as compared with \$554,533,629 in 1926.

Heavy crude	110,286,000	137,148,000

* Final figures; total includes approximately 8,900,000 barrels consumed on leases, etc., not included in 1927 figures.

Included in the 1927 exports were: crude petroleum, 15,843,405 barrels (bbl., 42 gals.) valued at \$25,944,489; refined oils, 115,501,010 barrels, valued \$429,900,884; distributed as follows: Gasoline, naphtha, etc., 43,436,328 barrels, valued at \$210,369,625, illuminating oil (kerosene) 19,279,503 barrels with a value of \$78,873,861, gas and fuel oil, 43,018,508 barrels valued at \$49,943,814, lubricating oil, 9,622,894 barrels with a value of \$88,826,865, and miscellaneous refined oils, 6,038,629 gallons, valued at \$1,886,719; lubricating greases, 100,483,272 pounds, valued at \$5,298,592; paraffin wax, 340,207,094 pounds, valued at the sum of \$15,029,503.

Canada was the principal market for crude petroleum, taking 13,036,216 barrels with a value of \$21,579,333, while Japan ranked second, taking 1,633,389 barrels valued at \$1,904,556; and Cuba ranked third, with an import trade valued at \$1,157,309. The United Kingdom led as a market for gasoline and naphtha, the consumption being 13,590,870 barrels with a value of \$63,088,679, and also in imports of American lubricating oil which had a total value of \$7,039,855 and of gas and fuel oil, valued at \$8,283,212. France imported 23,147,082 barrels of gasoline, naphtha, etc., valued at \$28,147,082, and Australia ranked third with imports of 2,470,-

403 barrels, valued at \$14,625,064. China, Hongkong, and Kwantung, led in imports of American illuminating oil, with a total of 2,562,821 gallons, valued at \$14,648,564.

The imports of petroleum and products in 1927 had a total value of \$113,434,019, as compared with \$124,556,211 in the previous year, and were distributed as follows: crude petroleum, 58,382,632 barrels, value, \$78,609,117; refined oils, 13,281,185 barrels, value, \$33,637,919; and paraffin and paraffin wax, 20,461,774 pounds, value, \$1,186,983. The principal imports of crude petroleum came from Mexico which supplied 26,019,058 barrels with a value of \$30,442,475 in 1927 as compared with 40,398,454 barrels valued at \$16,777,825, in 1926, while Venezuela ranked second with a value of \$14,945,832 and Netherland West Indies third, with \$14,228,581, followed by Colombia, and Peru. See CHEMISTRY, INDUSTRIAL.

PHILANTHROPY. See WELFARE WORK.

PHILHARMONIC ORCHESTRA. See MUSIC.

PHILIPPINES, fil'f-pîns, -pêns, -pîns. The largest island group of the Malay archipelago; a possession of the United States, ceded by Spain in the treaty of Apr. 11, 1899. Capital, Manila.

AREA AND POPULATION. Only 466 of the 7000 islands which make up the group have an area of one square mile or more. The most important islands with their area in square miles are as follows: Luzon, 40,814; Mindanao, 36,906; Samar, 5123; Negros, 4902; Palawan, 4500; Panay, 4448; Mindoro, 3794; Leyte, 2799; Cebu, 1695; Bohol, 1634; and Masbate, 1255. Total area, 114,400 square miles; population, according to the census of 1918, 10,314,310. An estimate of the population in 1920, based upon official computations, placed it at 11,568,994. The population of Manila was 285,306, according to the census of 1918. According to the same enumeration, the race distribution was as follows: Brown, 9,386,826; yellow, 50,826; white, 12,399; negro, 7623; half-breed, 34,663. The immigrants in 1926 numbered 33,541 and the emigrants 31,665.

EDUCATION. The Bureau of Education reports for the year 1926 showed that there had been slight decreases in the total annual enrollment in the number of teachers and primary schools and a slight increase in the intermediate and secondary enrollments. The total annual enrollment decreased from 1,096,758 to 1,061,612. This decrease was anticipated because of the closing of schools in which the attendance did not justify maintenance. This was one of the effects of over expansion of several years ago. One-teacher schools had been opened in barrios where the enrollment after a number of years decreased to such an extent that the cost of maintaining such schools was prohibitive. Another factor which caused a decrease in schools, teachers and enrollment was the fact that the Education Bureau put into effect a regulation that no new classes were to be opened and maintained by voluntary contributions unless a sufficient amount was collected before the schools opened to insure their operation during the entire school year. There were 25,322 teachers employed in 1926, only 294 of whom were Americans as against 25,701 in 1925 with 310 Ameri-

cans. As a result of closer inspection some of the poorest of the private schools were closed. Enrollment increased from 81,884 in 1925 to 88,001 in 1926.

PRODUCTION. Agriculture is by far the most important productive industry of the Philippine Islands on the basis both of value and of the number of people employed. The 10 leading crops on the basis of value, arranged in order of their importance, are rice, sugar cane, coconuts, abaca or manila hemp, corn, bananas, tobacco, maguay, sweet potatoes, and mangoes, but \$235,910,320, or 90.4 per cent, of the total value of the 28 leading crops is accounted for by the first five named. There are only 14,342 square miles, or 12.5 per cent of the total land area of the islands, under cultivation. No estimate of the total value of these lands is available.

The latest estimate of livestock showed 1,769,000 carabaos, 914,000 cattle, 289,000 horses and mules, 8,811,000 hogs, 1,849,000 goats, and 345,000 sheep. The islands are rich in mineral resources but they are as yet undeveloped. The more important minerals include silver, lead, zinc, copper, iron, coal, petroleum, asbestos and manganese, all of which are mined to some extent. Experts of the U. S. Department of Agriculture have reported that vast tracts of land are well adapted to the cultivation of rubber with a potential production of 70,000 tons annually. Estimates of land suitable for rubber cultivation vary from 1,500,000 to 2,000,000 acres, but adequate labor supply does not seem available.

COMMERCE. The Bureau of Foreign and Domestic Commerce at the very end of the year stated that the depression which marked business in the Philippine Islands at the close of 1926 carried over into 1927. However, some improvement was shown as the year advanced. A record sugar

crop compensated for the previous season's comparative failure, and a bountiful rice crop greatly reduced the islands' dependence upon foreign sources for its staple foodstuff. Copra and abaca were generally quiet with price fluctuations tending downward. Import trade for the first 10 months of the year was below that of the corresponding period in 1926, owing chiefly to lesser imports of cotton piece goods. Exports for the 10 month period considerably exceeded exports for the corresponding period of the previous year and a large favorable trade balance resulted.

The foreign trade of the Philippine Islands in the year 1927 consisted of total imports valued at \$115,851,471 and total exports valued at \$155,574,085. Of the imports, goods to the amount of \$71,478,297 came from the United States and of the exports the United States received \$116,038,250. Sugar, as usual, was the leading export, the total amount exported amounting to 553,324,007 kilos, valued at \$50,295,959, of which 508,317,150 kilos, valued at \$47,886,986, went to the United States. The copra exports for the year amounted to 199,318,985 kilos, valued at \$19,155,740, of which the United States received 157,827,446 kilos, valued at \$15,238,156. Coconut oil was exported to the amount of 144,802,683 kilos, valued at \$24,840,683, of which the United States took 141,588,606 kilos, valued at \$24,284,361. The cigar exports for the years numbered 207,578,605, valued at \$4,652,225, of which 167,300,765, valued at \$3,768,915, went to the United States. The total hemp exports in 1927 were 1,176,488 bales, value \$29,687,129, being distributed as follows: To the United States 383,764 bales, value \$12,201,976; to the United Kingdom, 326,074 bales, value \$7,156,566; to Japan, 256,907 bales, value \$5,389,003; and to other countries, 209,743 bales, value \$4,879,584.

GENERAL COMPARATIVE STATEMENT OF PHILIPPINE ISLAND FINANCES, 1926-28

	<i>Requested, 1928 Pesos</i>	<i>Estimated, 1927 Pesos</i>	<i>Actual, 1926 Pesos</i>
Income	72,443,260.00	72,289,450.00	78,164,590.18

Extraordinary charges	210,000.00	210,000.00	184,640.79
Investments	705,000.00	1,905,000.00	6,532,357.28
Public works funds	7,000,000.00	10,454,429.00	7,541,896.94
Excess of income over expenditures	104,815.00	3,813,087.00	12,585,239.71
Surplus, January 1	12,582,479.30	44,744,959.10
Surplus, December 31	8,769,442.30	32,209,719.39
Deductions	4,000,000.00 ^a	19,627,240.09 ^a
Cash surplus at the end of the year	4,759,442.30	12,582,479.30

^a Balances of outstanding appropriations, 8,822,518.55 pesos; continuing assets, net, 9,783,840.67 pesos; and advances to money order fund, 6,040,880.87 pesos.

^b For the completion of Post-office building, 2,000,000 pesos; and to complete the agreed purchase of shares of stock of the Manila Railroad Company under Act No.

8116, 2,000,000 pesos.

FINANCE. The accompanying table (page 634), from the report of the Governor-General to the Philippine Legislature, gives a general comparative statement of the financial condition of the islands.

The total bonded indebtedness of the islands on June 30, 1927, was \$79,684,500.

SHIPPING. Most of the foreign shipping is done through the port of Manila, although some of the smaller ports have direct communications with foreign countries. In the calendar year, 1926, 1076 vessels of 4,097,551 net tons entered the ports of the Philippines and 1066 of 4,078,032 tons cleared. In the same year 19, 581 vessels of 2,592,455 tons entered in the coastwise trade and 19,961 vessels of 2,606,605 tons cleared.

RAILWAYS. There are approximately 792 miles of railway and 6622 miles of public roads in the islands.

GOVERNMENT. Executive power is in the hands of a governor-general appointed by the President of the United States, by and with the advice and consent of the Senate; and in six departmental secretaries, all of whom are Filipinos, with the exception of the vice governor (appointed in the same manner as the governor-general), who acts as secretary of public instruction. Legislative power is in a senate of 24 members and a house of representatives of 93 members, all of whom are elected by popular vote, with the exception of nine representatives and two senators appointed by the governor-general to represent certain provinces. A council of state, composed of the governor-general as president, the presidents of both branches of the legislature, and the departmental secretaries, constitutes the link between the administrative and legislative departments. The Governor-General in 1927, was Major General Leonard Wood (q.v.).

HISTORY. The outstanding event in the history of the islands in 1927 was the death of Major General Wood (q.v.), who had held the position of Governor-General since Oct. 5, 1921. General Wood died at Boston, Mass., after an operation, on August 7. General Wood's administration of the Philippines was a source of continual commendation and bitter criticism, depending upon the outlook of the commentator. From the point of view of those who favored independence for the islands, particularly the Filipino nationalists, he was bitterly attacked and opposed. It is a well known fact that after 1923 very little constructive legislation was passed by the legislature of the islands because of the death struggle between the Filipino legislature and the Governor-General. As noted in the preceding YEAR BOOK, the report of Carmi Thompson, the President's personal investigator, recommended the abolition of the military aspects of the administration of the islands and the substitution of civil officers. Mr. Thompson's report held both Governor Wood and the Filipinos at fault. On the other hand there is no question concerning the constructive work accomplished under the governorship of General Wood. Under his leadership the commerce and industry of the islands improved considerably, education was brought to a much higher standard, and the financial and economic conditions of the possession were placed in a very healthy position.

On December 13, Henry L. Stimson was appointed by President Coolidge to succeed Major General Wood as Governor-General of the is-

lands. As noted in the article on Nicaragua. (q.v.), Mr. Stimson was the personal representative of the President in an investigation of that unhappy republic and was instrumental in settling the differences between Diaz and Sacasa and in arranging American supervision for the next presidential elections. Mr. Stimson was entirely familiar with the problems of the Philippines, of which he made a study during 1926. He announced that he would carry out the policies of General Wood, who had been a strong friend of his. This announcement was not welcome to those opponents of General Wood who had hoped for a complete liberalization of the American policies toward the islands. Mr. Stimson accepted the post as a duty, despite his feeling that his health would suffer in a tropical country. He believed that a fixed policy rigidly carried out would lead to American investments and a great increase in the rubber and other developments there, which had not expanded greatly because of unfavorable political conditions.

Mr. Stimson was born in New York City in 1867. He received degrees from Yale and Harvard Universities and from the Harvard Law School. He served from 1906 to 1909 as District Attorney for the Southern District of New York, leaving office to run for Governor of New York on the Republican ticket. He was Secretary of War from May, 1911, to March, 1913, in the cabinet of President Taft. In the World War he was Colonel of the Thirty-first Field Artillery.

The most notable event in the political fortunes of the islands during the year was the veto by President Coolidge of the plebiscite law of the Filipino legislature. On July 16, 1926, the Philippine House and Senate unanimously adopted a resolution declaring "the constant and intense desire of the Filipino people for immediate, absolute and complete independence." The Legislature voted for a plebiscite on the subject, and, when this was vetoed as beyond their power by General Wood, passed it over his veto on August 30. This act was vetoed by President Coolidge on Apr. 6, 1927. The most important points made in the President's veto message were as follows:

Under American sovereignty there has been steady progress in the introduction of a common language throughout the archipelago. There has been a continuous development and extension of highways, and, to the degree justified by business, an increase in inter-island means of communication. There has been, in short, a gradual but persistent effort to bring the peoples of the islands together. This effort has not as yet attained its object. The peoples are still in a marked degree isolated from each other. A common language is still a hope rather than an existing fact. There is still resentment at the employment of officials not native to the community, a resentment which, in certain cases, intensified by difference of religion and lack of free communication, becomes open hostility. This situation has created difficulties for the present government and conceivably might lead to the destruction of a government of the islands left to its own resources.

The resources of the islands are still in great number undeveloped. The land, however fertile, is idle. Surrounded by large countries with pressing problems of over-population, can it be hoped that the present immigration control could be maintained by an independent government?

I have dwelt at length on the economic difficulties which would be encountered by an independent government in the Philippines, not because these are necessarily the greatest difficulties, but because they are those that may be most readily appreciated and about which there can be the least controversy. Furthermore, I have heretofore referred to the other difficulties of an internal and external political character.

Such a government, crippled by the direct loss of

revenue, by increased interest rates on loans, and by the paralyzation of its industries, would be called on to incur the added cost of keeping up a diplomatic service, army, navy, and other features of sovereignty. It is obvious that the revenues of the islands would be totally inadequate to maintain a separate government.

These are but a few of the problems which would arise from a status of independence and which should be seriously considered by the people of the Philippines. In noting the constructive advance which they have made on the road of progress under the American flag, the blessings of peace, security, prosperity, liberty, and opportunity that they have enjoyed, they should not lose sight of the fact that without the material aid extended to them—and which they still need—these conditions could not have existed.

The standards of living have been raised, a splendid educational system established, the fundamental rights of the people preserved. They have the rights and privileges of American citizens without the obligations. They pay no Federal taxes, are exempt from the exclusion provisions of our immigration laws, do not pay for the defense or diplomatic services. They are represented in the United States by their own chosen representatives, who are paid by the United States. In the islands the officials of the municipalities are exclusively Filipinos, as are the officials of the fully organized Provinces. In the central government the legislature is made up entirely of Filipinos and possesses powers which no legislature has in this country. The lower judicial officials are all Filipinos. The judges of first instance, with but two exceptions, are Filipinos, and of the justices of the supreme court four of the nine are Filipinos. The chief justice is a Filipino. Of the heads of the executive departments, six in number, five are Filipinos. The attorney-general is a Filipino. Prosecuting attorneys throughout the islands are Filipinos. The personnel of the bureaus of civil service, treasury, and commerce and industry is entirely Filipino, and of the bureau of customs and bureau of posts is more than 99½ per cent Filipino. The American officials are but 1½ per cent of the total in the government.

PHILLIPS UNIVERSITY. A coeducational institution of higher learning, at University Station, Enid, Okla.; founded in 1907. The student enrollment for 1926-27 in all departments was 936, and the limited freshman admission was 270. The faculty numbered 39. The productive endowment amounted to \$506,830, and the endowment campaign completed during the year pledged \$1,252,184 for equipment. There were 14,894 volumes in the library, exclusive of public documents. President, Isaac Newton McCash, A.M., DD., LL.D.

PHILOLOGY, CLASSICAL. One can gain a fair conception of the more important contributions to classical philology by examining lists of articles and books, or abstracts of them, or both, given in certain periodicals—*American Historical Review*, *The American Journal of Philology*, *The Classical Journal*, *The Classical Quarterly*, *The Classical Review*, *The Classical Weekly*, *Historical Outlook*, *Athenæum* (published at Pavia, Italy), *Bulletin Bibliographique et Pédagogique du Musée Belge* (a companion to *Le Musée Belge*, *Revue de Philologie Classique*), *Philologische Wochenschrift*, *Gnomon*, and *Revue de Philologie*. The reviews, too, in these periodicals are very helpful. Especially valuable is *Bibliotheca Philologica Classica*, *Beiblatt zum Jahresbericht über die Fortschritte der Klassischen Altertumswissenschaft*, whose aim is to cover all publications, both articles and books (except such as are pedagogical in character) in the whole field of classical philology. No attempt is made, however, to indicate the relative values of items listed. Volume 51, covering 1924, contained 4464 items; Volume 52 gave 4884 entries for 1925.

The Association Guillaume Budé, in Paris, published *Des Années de Bibliographie Clas-*

sique: Bibliographie Critique et Analytique de l'Antiquité Greco-Latine pour la Période 1911-1924: Première Partie. Auteurs et Textes. In this the Greek and Latin authors are listed in alphabetical sequence, and books, articles, editions, etc., dealing with those authors are then given. In many instances there is a brief outline of the contents of book or article. A further valuable feature is the inclusion of references to reviews of articles or books.

The Year's Work in Classical Studies, published in England, lists material from July 1 to June 30. The volume for 1926-1927 contained the following articles: "Greek Literature," J. F. Dobson; "Latin Literature," A. D. Nock; "Greek History," M. Cary; "Roman History," H. Last; "Greek and Roman Religion," H. J. Rose; "Ancient Philosophy," Dorothy Tarrant; "Greek Palæography and Textual Criticism," T. W. Allen; "Latin Palæography and Textual Criticism," A. C. Clark; "Greek Archaeology and Excavation," A. M. Woodward; "Italian Archaeology and Excavation," T. Ashby.

To the *Loeb Classical Library* (see *YEAR BOOKS*, 1911-1926), additions were made, on the Greek side, of versions of Aristotle, *The Poetics*, and "Longinus" on the Sublime, W. H. Fyfe, Demetrius on Style, W. R. Roberts (in one volume); Athenæus, *The Deipnosophists* (the first of six volumes), C. B. Gulick; Dio, *Roman History* (the ninth and last volume), E. Cary; Hippocrates (the third of four volumes), E. T. Withington; Isæus, E. S. Forster; Josephus (the second of eight volumes, covering *The Jewish War*, Books I-III), H. St. J. Thackeray; *Lyra Græca* (the third and last volume), J. M. Edmonds; Plato, Volume VIII, W. R. M. Lamb; Plutarch, *Moralia* (the first of 14 volumes), F. C. Babbitt; Polybius (the last two of six volumes), W. R. Paton; Strabo, *Geography* (the fourth of eight volumes), H. L. Jones. On the Latin side, translations were added to Cicero, *The Speeches: Pro Lege Manilia, Pro Cæcina, Pro Cluentio, Pro Rabirio Perduellionis*, H. G. Hodge; Cicero, *Tusculan Disputations*, J. E. King; Cicero, *Letters to his Friends* (the first of three volumes), W. G. Williams; Aulus Gellius (the first two of three volumes), J. C. Rolfe.

The great translation of Aristotle which the Oxford Clarendon Press has had under way for years was advanced by the publication of Volume VII, a version of the *Problemata*, by E. S. Forster. In a volume entitled *Epicurus, The Extant Remains*, C. Bailey gave a version of all the extant fragments of Epicurus, the writer so important to the student of Lucretius. O. M. Dalton published *The History of the Franks, by Gregory of Tours, Translated with an Introduction*, two volumes. The introduction treats of Gregory himself, as man and as writer, the Merovingian kingdoms, the Merovingian Church, and Merovingian life.

Part III of the revision of Liddell and Scott, Greek-English Lexicon (see *YEAR BOOKS* for 1925-1926) appeared. This comprised the articles *διάλειμμα* to *ἐξελυτελιστής*. Parts II and III of Volume II of the great *Lexicon Plautinum*, by G. Lodge, covering the articles *multus* to *parvus*, appeared.

In *The American Journal of Philology*, xlviii, appeared "Marks of Quantity in the Monumentum Antiochenum," J. C. Rolfe; "Polybius of Megalopolis," E. G. Sihler; "Observations on the Indirect Volitive in Latin," W. H. Kirk;

"Cæsar B. G. VII, 41, 1: A Defence of the MSS.," S. G. Oliphant; "The Single Combat Between Hector and Aias," S. E. Bassett; "The Nature of the Latin Passive in the Light of Recent Discoveries," Edith F. Claflin; "Queen Eurydice and the Evidence for Woman-Power in Early Macedonia," Grace H. Macurdy; "Freedom of Speech in Ancient Athens," M. Radin; "Greek Fish Names," F. A. Wood; "Verbal Homeopathy and the Etymological Story," E. S. McCartney.

From *Classical Philology*, xxii, may be mentioned "A New Astrological Treatise: Michigan Papyrus No. 1," F. E. Robbins; "The Jurisdiction of the Areopagus," Gertrude Smith; "Poetry in Athenian Courts," A. P. Dörjahn; "The Terminology of 'Gratitude' in Greek," J. W. Hewitt; "Fishing With a Rod in Homer," A. Shewan; "The Use of Slaves by Athenians in Warfare," Rachel L. Sargent; "In the Service of Rome: Letters from the Michigan Collection of Papyri," J. G. Winter.

In *The Classical Journal*, xxii, xxiii, appeared "Some Aspects of the Character of Dido," A. S. Pease; "Popular Methods of Measuring," E. S. McCartney; "Ovid in Exile," R. H. Coon; "The Chronology of Cæsar's Consulship," F. B. Marsh; "Notes on the Pathetic Fallacy in Latin Poetry," A. S. Pease; "Ovid's *Æneid* and Vergil's: A Contrast in Motivation," F. J. Miller.

The Classical Weekly, xx, xxi, contained the following articles: "The Faith of a Humanistic Philosopher (= Cicero)," Margaret Y. Henry; "Horace, *Carmina* 2. 6.9-14," C. Knapp; "Analogy, The Vital Principle of Language," E. H. Sturtevant; "Plato's Apology and Xenophon's Apology," L. R. Shero; "Greek Conceptions of Freedom," W. R. Agard; "Bureaucracy and Petty Graft in Ancient Egypt," C. J. Kraemer, Jr.; "Æneid 6.739-751," E. Adelaide Hahn; "The Loeb Classical Library: Twenty-Two Recent Additions," C. Knapp; "The Second Sallustian *Suasoria*," L. A. Post; "The End, and the Beginning of Plato's *Phædo*," W. R. Roberts; "Vergil and Some Problems of the Present," M. B. Ogle; "An Attempt to Reconstruct the First Edition of Plato's *Republic*," L. A. Post; "The Modernity of Greek Literature," L. Van Hook; "Odysseus in the *Iliad*," P. R. Coleman-Norton.

In *Transactions and Proceedings of the American Philological Association*, lvii, which contained the papers read before the Association at its meeting of December, 1926, the following articles appeared: "A Defense of the Nine-Book Tradition of Pliny's *Letters*," S. E. Stout; "The Last Assessment of the Athenian Empire," A. B. West; "The So-called Emphatic Position of the Runover Word in the Homeric Hexameter," S. E. Bassett; "The Ovidian Authorship of the *Lygdamus Elegies*," R. S. Radford; "The Literary Influence of Cicero on Juvenal," H. F. Rebert; "Greek and Latin Inscriptions from Asia Minor," D. M. Robinson; "An Interpretation of Apuleius' *Metamorphoses*," B. E. Perry; "Ovidian Vocabulary and the *Culex* Question," F. W. Shipley.

In the *Philological Quarterly*, vi, appeared "An Analysis of Cicero, *Tusculan Disputations*, Book I," C. Knapp; "Early Ecclesiastical Literature and its Relation to the Literature of Classical and Medieval Times," R. J. DeFerrari; "A Study of Terence's Prologues," R. C. Flickinger.

In England, the more accessible repositories

of the results of classical study are *The Year's Work in Classical Studies* (see third paragraph of this article), *The Classical Quarterly*, and *The Classical Review*. From *The Classical Quarterly*, xxi, we mention "The Meaning of the *Hippolytus* of Euripides," J. A. Spranger; "The Policy of Clodius," F. B. Marsh; "The Hymn to Hermes," T. L. Agar; "Livy's Fourth Decade," S. K. Johnson; "Authorship of *Hippias Maior*," D. Tarrant; "Archaism in Terence," J. D. Craig; "Technical Terms in Aristophanes," J. D. Denniston; "The Bacchanalian Cult of 186 B. C.," T. Frank; "The Composition of Aristotle's *Politics*," J. L. Stocks; "Donatus-Extracts in MS. D of Terence," W. M. Lindsay.

Only two of the longer articles in *The Classical Review* can be mentioned: "*Electra*: A Defence of Sophocles," J. T. Sheppard; "Hot Weather in the Classics," H. J. Rose. There is a great array of articles which, though brief, are of interest and value.

There remains space enough to mention only a very few of the books that have come to the writer's attention. Since it is, in general, clear from the title to which field of classical philology each book belongs, the books are listed in the alphabetical order of their authors' names. In a very few instances a needed word of comment is added: F. F. Abbott and A. C. Johnson, *Municipal Administration in the Roman Empire*; C. D. Adams, *Demosthenes and his Influence*; J. T. Allen, *Stage Antiquities of the Greeks and Romans and Their Influence*; T. Ashby, *The Roman Campagna*; E. Bethe, *Homer, Dichtung und Sage*, Volume III, dealing with "Die Sage vom Troischen Kriege"; E. Bevan, *Later Greek Religion*; R. J. Bonner, *Lawyers and Litigants in Ancient Athens*; V. Burch, *Myth and Constantine the Great*; G. M. Calhoun, *The Growth of Criminal Law in Ancient Greece*; *The Cambridge Ancient History*, Volume I of Plates, Volume V, dealing with "Athens 478-401 B. C.," Volume VI, dealing with "Macedon 401-301 B. C.," A. Carnoy, *La Science du Mot; Traité de Sémantique*; V. Chapot, *Le Monde Romaine*; F. L. Clark, *A Study of the Iliad in Translation*; R. Delbrück, *Die Consulardiplomien und Verwandte*, three parts; D. L. Drew, *The Allegory of the Æneid*; J. Wight Duff, *A Literary History of Rome in the Silver Age, From Tiberius to Hadrian*; H. Ernout, *Morphologie Historique du Latin*, new edition; A. Ferrabino, *L'Impero Atheniense*; R. C. Flickinger, *The Greek Theater and its Drama*, third edition; T. Frank, *An Economic History of Rome*, second edition; Sir J. G. Frazer, *Man, God and Immortality: Thoughts on Human Progress*; T. R. Glover, *Democracy in the Ancient World*; C. B. Gulick, *Modern Traits in Old Greek Life*; Elizabeth H. Haight, *Apuleius and His Influence*; W. R. Halliday, *Greek and Roman Folklore*; Jane Harrison, *Themis: A Study of the Social Origins of Greek Religion*, second edition (little altered); H. B. Liddell Hart, *A Greater Than Napoleon: Scipio Africanus*; B. W. Henderson, *Five Roman Emperors—Vespasian, Titus, Domitian, Nerva, Trajan*; H. Hirt, *Indogermanische Grammatik: Teil III—Das Nomen*; L. W. Hunter and S. A. Hanford, *Æneas (Tæitiōus) on Siegescraft*; T. Hudson-Williams, *Early Greek Elegy*; Christian Huelsen, *The Forum and the Palatine*, translated by Helen H. Tanzer; M. Hutton, *The Greek Point of View and Many Minds* (two works); P. Jouanet, *L'Impérialisme Macédonien et l'Hel-*

lénisation de l'Orient; H. Knorr, *Emporos: Data on Trade and Trader in Greek Literature from Homer to Aristotle*; F. B. Marsh, *The Founding of the Roman Empire*, second edition; J. L. Myres, *The Political Ideas of the Greeks*; P. Nixon, *Martial and the Modern Epigram*; Pauly-Wissowa, *Real-Encyclopädie der Classischen Altertumswissenschaft*, Volume XIII, Part 2, and Volume III, Part 1 of the Second Series ("Zweite Reihe"): the volumes give the articles "Lokroi" to "Lysimachides," and "Silacenis" to "Sparsus": A. W. Pickard-Cambridge, *Dithyramb, Tragedy and Comedy*; H. W. Prescott, *The Development of Virgil's Art*; F. J. E. Raby, *A History of Christian-Latin Poetry from the Beginnings to the Close of the Middle Ages*; W. Radcliffe, *Fishing from the Earliest Times*, second edition; W. M. Ramsay and A. von Premerstein, *Monumentum Antiochenum: Die Neugefundene Aufzeichnung der Res Gestae Divi Augusti in Pisidischen Antiochia*; D. Randall MacIver, *The Etruscans*; R. Reitzenstein, *Die Hellenistischen Mysterienreligionen nach ihren Grundgedanken und Wirkungen*, third edition; A. Reymond, *History of the Sciences in Graeco-Roman Antiquity*, translated by Ruth G. De Bray; P. K. B. Reynolds, *The Vigiles of Imperial Rome*; Gisela M. A. Richter, *The Metropolitan Museum of Art: Handbook of the Classical Collection*, third edition; W. Ritchie, *The Plays of Terence Translated into Parallel English Metres*; Sir R. Rodd, *Homer's Ithaca: A Vindication of Tradition*; H. J. Rose, *Primitive Culture in Italy*; M. Rostovtzeff, *A History of the Ancient World. Volume II, Rome*; H. V. Routh, *God, Man, and Epic: A Study in Comparative Literature, Volume I, Classical, Volume II, Mediaeval*; H. A. Sanders and C. Schmidt, *The Minor Prophets in the Freer Collection and the Berlin Fragment of Genesis*; Sir J. E. Sandys, *Latin Epigraphy*, second edition, by S. G. Campbell; L. Séchan, *Études sur la Tragédie Grecque dans ses Rapports avec la Céramique*; D. A. Slater, *Towards a Text of the Metamorphosis (sic!) of Ovid*; E. A. Sonnenschein, *The Soul of Grammar: A Bird's-eye View of the Organic Unity of the Ancient and Modern Languages Studied in British and American Schools*; A. Stein, *Der Römische Ritterstand: Ein Beitrag zur Sozial- und Personengeschichte des Römischen Reiches*; *Thesaurus Linguae Latinae*, Volume VI, Fasciculus VIII, containing the articles *funus* to *gemo*; H. Tarn, *Hellenistic Civilization*; U. von Wilamowitz-Moellendorf, *Die Heimkehr des Odysseus*; C. Wunderer, *Polybius: Lebens- und Weltanschauung aus dem Zweiten Vorchristlichen Jahrhundert*; Thaddeus Zielinski, *The Religion of Ancient Greece: An Outline*, translated by G. R. Noyes.

PHILOLOGY, MODERN. The most notable event of the year in this field was the completion of the *New English Dictionary on Historical Principles*, popularly, but erroneously, known as the *Oxford English Dictionary*. The collection of the material for this great work was begun in 1857 when the Philological Society of England appointed a committee to list words not to be found in existing dictionaries. Herbert Coleridge was the first editor and it was under his direction that the system of volunteer readers was organized. But after the death of Coleridge in 1861 interest in the undertaking declined, and no attempt would probably have been made to revive it had it not been for the superior ad-

ministrative ability of Dr. James A. H. Murray, a Scottish scholar, who was appointed editor of the new dictionary in 1879, in the face of violent opposition from the University of Oxford. The first section of this great work was issued in February, 1884, and since then parts have appeared at regular intervals. It should also be remarked that the plan followed in presenting the material reveals no innovations of any importance. Thus, the idea of illustrating or supporting the meanings of words by quotations had been introduced several centuries ago, and even the desirability of doing this on historical principles had been proved in such works as the great French dictionary of Littré.

The second movement to be noted concerns language teaching in America and is unfortunately of a negative character. It is the tendency toward separation of the several branches of the teaching and study of the modern languages which is viewed with much apprehension by some of our leading scholars. In an address on the "Coördination of the Teaching of French with that of the Other Romance Languages" delivered by Professor de Onís of Columbia University before the Fifth Congress of the French Language on April 21 and published in the *Romanic Review* (pp. 297-305), the grave dangers of such a movement are ably pointed out. Notwithstanding that he is a professor of Spanish, in which branch this tendency first manifested itself, Professor de Onís inveighs against this spirit which may possibly mean the disruption of language work in our American institutions of learning. It is to be earnestly hoped that our misguided enthusiasts will heed the words of warning pronounced by one whose broad experience qualifies him to speak.

GENERAL. As an indication of the revolution being brought about in the more or less technical vocabularies of modern languages as a consequence of scientific progress, Mr. G. W. Bragdon pointed out in 1927 in the *New York Times* how for the first time in centuries the mechanization of ships has almost overnight rephrased the language of the sea. When we consider that the vocabulary relating to the horse and buggy, and other attributes of our social life still common a quarter of a century ago, is going the way of archery and other obsolete vocations, we may well understand what significant changes the future has in store for us. Thus, S. Gernsback's *Radio Encyclopedia* (N. Y.)^a and the *Handbook of the British Broadcasting Corporation* (London) initiate us into an extensive vocabulary in the making.

Studies in primitive anthropology and sociology include John Murphy, *Primitive Man* (N. Y.); H. J. Massingham, *Downland Man* (N. Y.); G. M. Jones, *Man and Society* (Menasha, Wis.); Griffith Taylor, *Environment and Race* (N. Y.); Ellsworth Huntington, *The Human Habitat* (N. Y.), the story of how mankind has adapted itself to various geographical conditions; and Paul Radin, *Primitive Man as Philosopher* (N. Y.).

Of a comprehensive nature is the first volume of a new twelve-volume encyclopædia of arts and sciences, history and biography, religions, nations, races, customs, and institutions, issued by a group of Catholic scholars under the title of *Universal Knowledge* (N. Y.). Following

^aWhen no date is given, it is understood that the work in question appeared in 1927.

somewhat the same lines is Clement Wood's *Outline of Man's Knowledge* (N. Y.). More technical in character are Miller Christy, *Catalogue of the Bryant and May Museum of Fire-Making Appliances* (London), which gives some account of every known method of fire-making from the earliest times; the Medici Society's volume on *Knives and Forks* (London) recording the changes in their style and use throughout history; Mary Symonds and L. Preece, *Needlework Through the Ages* (London); Professor Fleming's *Encyclopædia of Textiles* (London), containing a historical introduction and 300 plates of the finest examples of textiles, from the earliest times; Otto Hoever, *Encyclopædia of Ironwork* (London); the British Ministry of Labor's *Dictionary of Occupations* (London), in which 16,000 occupations are listed; and A. R. Burns, *Money and Monetary Policy in Early Times* (N. Y.), a new volume in the "History of Civilization" series.

The index volume of Dr. James Hastings' *Encyclopædia of Religion and Ethics* (N. Y.) renders this important work more accessible to scholars. Other works dealing with the history of religions include a new volume of the series *Mythology of All Races (Finno-Ugric, Siberian)*, by Uno Holmberg (Boston); E. E. Kellett, *Story of Myth* (London) which shows the main psychological elements that have contributed to the formation and development of mythology; B. C. A. Windle, *Religions Past and Present* (N. Y.), an elementary account of comparative religion; and F. T. Miller, *World's Strange Religions* (N. Y.), a study in six volumes.

More particularly linguistic in character are M. H. Liddell, *The Physical Characteristics of Speech-Sound, III* (Lafayette, Ind.), a volume of investigations on the energy frequency ratios of vowels, issued by Purdue University; C. Callet, *Le Mystère du langage* (Paris, 1926), dealing with the evolution of primitive sounds; P. M. Groth, *Kulturwandel und Bedeutungswandel* (Rudolstadt, 1926); Roland G. Kent, *The Textual Criticism of Inscriptions* (Phila.), a publication of the Linguistic Society of America; B. Migliorini, *Dal nome proprio al nome comune* (Geneva); and W. Giese, *Anthologie der geistigen Kultur auf der Pyrenäenhalbinsel* (Hamburg-Berlin), relating especially to the Middle Ages. Curious particulars of the science of algorism and of the use of the abacus are discussed by Florence A. Yeldham in *The Story of Reckoning in the Middle Ages* (London). Other surveys of mediæval civilization include C. G. Crump and E. F. Jacob, *The Legacy of the Middle Ages* (N. Y.); P. Boissonade, *Life and Work in Mediæval Europe* (N. Y.); and Martha J. R. Teel, *Twelfth Century Characters and Characteristics* (Boston).

INDO-IRANIAN. A. A. MacDonell, *India's Past* (N. Y.) contains an excellent survey of the literature, religions, languages and antiquities of that country. A. Waley, *A Pageant of India* (Boston) is an outline of Hindu history beginning with Buddha and Alexander of Macedon. The second volume of S. Radhakrishnan, *Indian Philosophy* (N. Y.) is devoted to a discussion of the six Brahmanical systems. Religion forms also the subject of S. N. Dasgupta, *Hindu Mysticism* (Chicago); and P. Yevtic, *Karma and Reincarnation in Hindu Religion and Philosophy* (London). The following studies on Buddha and Buddhism are deserving of consideration: E.

J. Thomas, *The Life of Buddha as Legend and History* (N. Y.); A. F. Herold, *Life of Buddha* (N. Y.) translated from the French by P. C. Blum; *The Story of Buddha and Buddhism* (Phila.) edited by Brian Brown; K. L. Reichelt, *Truth and Tradition in Chinese Buddhism* (Shanghai, China), being a study of the Chinese Mahayana Buddhism; and J. E. Ellam, *The Religion of Tibet* (London), which is a scholarly but popular account of the peculiar form of Buddhism known as Lamaism.

Of a literary character are J. E. Abbott, *Bhanudas* (N. Y.), being a translation from the *Bhaktavijaya*; and Gwendolene Goodwin, *Anthology of Modern Indian Poetry* (London). J. F. Blumhardt, *Catalogue of the Hindustani Manuscripts in the Library of the India Office* (N. Y.) will be of great value to scholars.

With respect to Persia, mention should be made of C. Huart, *Ancient Persia and Iranian Civilization* (N. Y.); and a new edition of *The Rubaiyat of Omar Khayyam* (Boston), translated by Edward Fitzgerald.

CELTIC. In their eagerness to uphold the cause of their country, Irish enthusiasts, neglecting even the rudiments of philology, boldly bring forth year after year publications that are almost absurd in the extravagance of their pretensions. For example, a writer of worth, Seumas MacManus, in an article on "Ireland is Re-Learning its Forgotten Tongue," published in the *New York Times* of Jan. 30, 1927, makes the extraordinary assertion that Celtic, Hebrew and Sanskrit "are the three root languages of the Aryan group"! Likewise Benedict Fitzpatrick, not satisfied with his own *Ireland and the Making of Britain* (N. Y.), takes for his second work the yet more ambitious title of *Ireland and the Foundations of Europe* (N. Y.)! Though there are excellent courses on the history of the Irish language offered in both winter and summer terms by the educational institutions of Ireland, they seem as yet only to be attended by foreigners. On the other hand, Eleanor Hull, Secretary of the Irish Texts Society, has recently published a *History of Ireland and Her People to the Close of the Tudor Period* (London) which can be commended for its scholarship as well as for its style. Likewise a valuable contribution is A. H. Krappe, *Balor with the Evil Eye* (N. Y.), a publication of the Institut des Études Françaises.

Other scholarly works include C. H. Slover, *Early Literary Channels between Britain and Ireland* (Austin, Tex.), a doctoral dissertation of the University of Chicago, discussing the relations between Britain and Ireland preceding the twelfth century; the same author's "William of Malmesbury's *Life of St. Patrick*," published in *Modern Philology* (Chicago); and A. H. Krappe, "The Fighting Snakes in the *Historia Britonum* of Nennius," published in the *Revue Celtique* (Paris). Works of historical interest include F. E. Ball, *The Judges in Ireland, 1221-1921* (N. Y.), a history of English appointees; and E. Curtis, *Richard II in Ireland, 1394-5, and Submissions of the Irish Chiefs* (N. Y.), containing letters in the original Latin with English translation. Among contributions to folklore are Lady Gregory, *The Kiltartan History Book* (London); and *The Midnight Court and the Adventures of a Luckless Fellow* (N. Y.), translated from the Gaelic by P. A. Ussher. Dr. G. P. Black, of the New York Public Library,

provides an excellent bibliography in *Macpherson's Ossian and the Ossianic Controversy* (N. Y.).

Scottish Gaelic and Welsh are represented in A. Polson, *Our Highland Folklore Heritage* (Inverness), a collection of popular beliefs and stories; Sir James Wilson, *The Dialects of Central Scotland* (N. Y.) containing also a vocabulary; A. Morgan, *Rise and Progress of Scottish Education* (London); T. M. Chotzen, *Recherches sur la Poésie de Dafydd ab Iwan, Barde gallois du XIV^e Siècle* (Paris); Mary Salmon, *A Source Book of Welsh History* (N. Y.), for students and teachers; and J. Baudiš, *Grammar of Early Welsh* (London), containing in its first part a sound study of phonology. R. S. Loomis, *Celtic Myth and Arthurian Romance* (N. Y.) discusses the vital contribution which Arthurian romance makes to the study of Irish and Welsh mythology. W. J. Entwistle, *The Arthurian Legend in the Literature of the Spanish Peninsula* (London) contains an interesting and exhaustive research in the introduction, history and influence of these romances in Spain. Finally, Lucy A. Paton, *Les Prophéties de Merlin* (N. Y.) includes in the first volume an Introduction and Text, and in the second Studies in the Contents, in which a curious phase of human thought is presented in a very scholarly manner.

SLAVIC. Prince D. S. Mirsky's *History of Russian Literature* (N. Y.) extends from the earliest times to the death of Dostoyevsky in 1881. This volume not only complements his recent one on contemporary Russian literature, but also contains a satisfactory discussion of the decline of the novel, especially in the '70's. Other contributions deserving mention are *Russian Poetry* (N. Y.), chosen and translated by Babette Deutsch and A. Yarmolinsky; Krylov's *Fables*, translated by B. Pares (N. Y.); and C. A. Manning, *I. A. Goncharov*, published in the *South Atlantic Quarterly*.

GERMANICS. The *Germanic Review*, published by the Department of Germanic Languages of Columbia University, began in its April number the publication of an "American Bibliography of Germanic Languages and Literatures." Three sections of this useful bibliography have now been published by H. G. Wendt and F. W. J. Heuser. Other important contributions to this review include M. B. Evans, "The Passion Play of Lucerne"; and R. H. Fife, "The Place of Biography in German Literary History." A useful dictionary is the new edition, much enlarged, of J. Bethell, *German-English and English-German Commercial Dictionary* (N. Y.). Goethe's *Faust* (London), is an excellent verse-translation done in the original metres by W. H. Van Der Smitten.

The American Scandinavian Foundation has issued recently an English version of *Norse Mythology* (N. Y.) by P. A. Munch and M. Olsen. Among useful works in the field of Scandinavian may be mentioned A. H. Krappe, "An Oriental Source of the Icelandic Version of 'Godfather Death'," published in *Scandinavian Studies and Notes*; E. V. Gordon, *Introduction to Old Norse* (N. Y.), containing selections for reading; S. Jonsson, *Primer of Modern Icelandic* (N. Y.); and H. V. E. Palmblad, *Strindberg's Conception of History* (N. Y.), a doctoral dissertation of Columbia University.

As for Dutch, J. F. Bense, *Anglo-Dutch Re-*

lations (N. Y.) supplies a historical introduction to a dictionary of the low Dutch element in the English vocabulary.

ENGLISH. Valuable bibliographies include A. G. Kennedy, *A Bibliography of Writings on the English Language* (New Haven, Conn.) extending from the beginning of printing to 1923; and the catalogue prepared by A. W. Pollard and G. R. Redgrave for the Bibliographical Society of England, which attempts to record every English book known to have been printed up to the end of 1640. The *Collected Essays of Henry Bradley* (Oxford) consists of articles and essays, by one of the editors of the aforementioned *New English Dictionary*, on lexicography, place-names, language and literary history. The new and enlarged edition of the *Dictionary of Anonymous and Pseudonymous English Literature* (London), by Dr. James Kennedy, W. A. Smith, and A. F. Johnson, has now reached the end of the letter G (vol. ii).

The twenty-seventh volume of the Mediæval Library consists of a verse-translation of *Beowulf* by D. H. Crawford (N. Y.). Other works dealing with the Anglo-Saxon period of England include M. H. Turk, *Anglo-Saxon Reader* (N. Y.); Marjorie and C. H. B. Quennell, *Everyday Life in Anglo-Saxon, Viking and Norman Times* (N. Y.); and A. Weigall, *Wanderings in Anglo-Saxon Britain* (N. Y.), a historical study of the period between the sixth and eleventh centuries.

The later mediæval age is studied in such works as Hilaire Belloc, *History of England* (N. Y.) of which the second volume deals with the period extending from 1066 to 1348; Sarah H. Benton, *Life of William the Conqueror* (N. Y.) in which the Norman Duke is portrayed as a bandit; G. Home and E. Foard, *Mediæval London* (N. Y.); *Documents Illustrating the History of Civilization in Mediæval England* (N. Y.), translated and edited by R. T. Davies; W. A. Morris, *The Mediæval English Sheriff to 1300* (N. Y.); and the ninth volume of *Oxford Studies in Social and Legal History* (Oxford) which consists of a study on the *Social Structure of Mediæval East Anglia*, by D. C. Douglas. Mediæval philosophy and religion form the subject of C. R. S. Harris' two volumes on *Duns Scotus* (N. Y.); C. K. Brampton, *De Imperatorum et Pontificum Potestate* of William of Ockham (N. Y.); R. L. Poole's edition of *Ioannis Saresberiensis Historiæ Pontificalis* (N. Y.); and John Dickinson's translation of *The Statesman's Book of John of Salisbury* (N. Y.), containing the fourth, fifth and sixth books, and selections from the seventh and eighth books of the *Policraticus*.

Early English literature is represented in *Floris and Blanchefleur*, a middle-English romance edited by A. B. Taylor (N. Y.); J. M. Manly, *Chaucer and the Rhetoricians* (Oxford); G. H. Cowling, *Chaucer* (N. Y.), a critical study; R. L. French, *A Chaucer Handbook* (N. Y.); Margaret Schlauch, *Chaucer's Constance and Accursed Queens* (N. Y.), an excellent study in literary sources; W. C. Curry, *Chaucer and the Mediæval Sciences* (N. Y.); *The Nun's Priest's Tale* (N. Y.), edited by K. Sisam; and Eleanor P. Hammond, *English Verse Between Chaucer and Surrey* (Durham, N. C.), containing well-chosen examples with bibliographies and glossary.

Contributions to the Reformation period in-

clude W. J. Lawrence, *The Physical Conditions of the Elizabethan Public Playhouse* (Cambridge, Mass.); the same author's *Pre-Restoration Stage Studies* (ib.); E. Legouis, *Edmund Spenser* (N. Y.), consisting of lectures delivered at Johns Hopkins University; Kathleen M. Lynch, *The Social Mode of Restoration Comedy* (N. Y.); H. E. Rollins, *The Paradise of Dainty Devices, 1576-1606* (Cambridge, Mass.), a reprint of the most popular miscellany published during the reign of Elizabeth; B. Steel, *O Rare Ben Jonson* (N. Y.); and the third volume of the works of the same author, edited by C. H. Herford and P. Simpson (N. Y.).

On the English language we have G. P. Krapp, *The Knowledge of English* (N. Y.); and the same author's *Comprehensive Guide to Good English* (N. Y.), containing studies on pronunciation, the use of the dictionary, etc. Further contributions to American English include W. A. Craigie, *The Study of American English* (N. Y.), an S. P. E. Tract; and H. E. Palmer, *Dictionary of English Pronunciation with American Variants* (N. Y.), giving the pronunciation of about 10,000 words.

Of a practical character are W. A. Craigie, *English Spelling* (N. Y.); J. Bechtel, *Errors in English* (Phila.), revised by Reese James; Sophie C. Hadida, *Pitfalls in English and How to Avoid Them* (N. Y.); Hugo's *How to Avoid Incorrect English* (Phila.); R. W. Brown, *Materials for Word Study* (New Haven, Conn.), a manual of roots and derivatives; a new edition of George Crabb's *English Synonyms Explained* (N. Y.); O. Jespersen, *On Some Disputed Points in English Grammar* (N. Y.); and R. Bridges, *English Handwriting* (N. Y.), being S. P. E. Tracts, Nos. 25 and 28. Studies on vocabulary include R. W. Walter, *The Inglis Tests of English Vocabulary* (N. Y.); *The Winston Simplified Dictionary* (Phila.), edited by W. D. Lewis, H. S. Canby, and T. K. Brown, Jr.; F. G. and H. W. Fowler, *The Pocket Oxford Dictionary* (N. Y.), the American edition revised by G. Van Santvoord; and P. D. Hugon, *Morrow's Word-Finder* (N. Y.).

Among works of a miscellaneous character are E. Legouis and L. Cazamian, *History of English Literature* (N. Y.) of which the second volume, translated by W. D. MacInnes, covers the period from 1660 to 1914; A. Trenser, *The Sea in English Literature* (London), from Beowulf to Donne; P. L. Dickenson, *Outline History of Architecture of the British Isles* (Boston); G. H. West, *Gothic Architecture in England and France* (N. Y.), a second edition; C. W. Budden, *English Gothic Churches* (N. Y.); J. Pulver, *Biographical Dictionary of Old English Music* (N. Y.), *Encyclopædia of English Furniture* (N. Y.), edited by O. Brackett; C. F. Smith, *Book of Chanties* (Boston) containing the authentic words and music of the best of the sailors' chanties, together with the history of each song; and A. Ponsonby, *English Diaries* (N. Y.), second series, a review extending from the sixteenth to the twentieth century.

ROMANCE, GENERAL. The most complete bibliography of Romance philology published is that of Dr. Pauline Taylor which appears annually in the *Romanic Review* (N. Y.). That relating to the year 1926, for example, may be found in the July-September and October-December numbers, (pp. 278-291; 366-380), and is divided into eleven parts with addenda. The *Publications of*

the Modern Language Association of America also contain annually an *American Bibliography* consisting of contributions of Americans to the subject. Thus, the 1926 bibliography was prepared by Professors H. C. Lancaster and J. P. W. Crawford and appeared on pages 30-45 of the above review.

Special attention should be called to the article of Professor Daniel Mornet of the University of Paris, which appeared in the *Romanic Review* (pp. 103-113) under the title *Philosophie de la Littérature ou Histoire de la Littérature*. Therein the author not only defends the nationalistic outlook in literary research as well as the so-called *fiche* system, but also criticizes attempts to build comparative literature upon unproven international influences.

R. M. Merrill's *Last of American Doctoral Dissertations in the Romance Field, 1876-1926*, which was published by the Institut des Études Françaises (N. Y.), contains in the more than 500 titles listed an excellent survey of the evolution of Romance scholarship in the United States during the period indicated.

FRENCH. C. Sprietsma, *Thèses de lettres à Columbia University*, which appeared in the *Revue des Cours et Conférences* of the University of Paris (pp. 766 etc.), supplies an interesting discussion of the doctoral dissertations in this field presented at the above university.

The most valuable contribution of the year is in all probability Joseph Bédier, *La Chanson de Roland* (Paris). The great critic discusses therein the origin and development of the *Chanson*, its language, versification, etc. Other important works relating to Old French are Jessie Crosland, *Raoul de Cambrai* (London), an excellent translation of the feudal epic; Eunice R. Goddard, *Women's Costumes in the French Texts of the Eleventh and Twelfth Centuries* (Baltimore), a worthy dissertation of Johns Hopkins University; E. S. Murrell, *Girart de Roussillon and the Tristan Poems* (Chesterfield), being an attempt to determine the nature of the legend of Girart; and J. L. Perrier, *Le Siège de Barbastre* (Paris), an edition of the text. K. Glaser, *Altfranzösisches Lesebuch des späteren Mittelalters* (Halle) is an excellent introduction to the literature of this period. Other contributions of importance are A. Hilka's new edition of W. Foerster's *Kristian von Troyes Yvain* (Halle); E. Brugger, *Eigenamen in den Lais der Marie de France*, a splendid contribution issued by the *Zeitschrift für französische Sprache*; J. Bédier, *Tristan and Iseult* (N. Y.) translated by Hilaire Belloc; J. R. Reinhard's excellent edition of *Amadas et Ydoine* (Paris), a thirteenth century romance; B. Edwards, *Classification of the Manuscripts of Gui de Cambrai's "Vengement Alioandre"* (Princeton, N. J.), the 20th volume of the Elliott Monographs; E. C. Armstrong, *The Authorship of the "Vengement Alioandre"* and of the *"Venjance Alioandre"* (Princeton, N. J.), a contribution of the editor of the Elliott Monographs; Abbé F. Klein, *Sept Comédies du Moyen Âge* (Paris); *Saint Joan of Orleans* (N. Y.) consisting of scenes from the fifteenth century mystery translated by Joan Evans; and F. Carco, *The Romance of Villon* (N. Y.), a novelistic biography.

On the French Renaissance we have the valuable survey of J. Plattard, *État présent des études renaissance* (Paris), which supplies

the results of the extensive researches devoted to Rabelais during the past quarter century. A new edition of the famous translation of Sir T. Urquhart entitled *The Complete Works of Doctor François Rabelais* has also appeared (N. Y., 2 vols.). B. Guégan's edition of *Œuvres poétiques complètes de Maurice Scève* (Paris) contains many elucidating notes on the work of the first symbolist poet of France. F. L. Schoell, *Études sur l'humanisme continental en Angleterre à la fin de la Renaissance* (Paris) is devoted to leading humanists such as Erasmus, Ficino and Henri Estienne. E. J. Trechmann is issuing a new translation of Montaigne's *Essays* (Oxford).

As the later periods of French literature (q.v.) will be discussed elsewhere in this volume, we shall therefore mention only a few general and bibliographical works, such as G. L. van Roosbroeck, *Corneille's Early Theories*, published in *Neophilologus* (pp. 166-172); A. Schinz, *Bibliographie critique de Jean-Jacques Rousseau dans les cinq dernières années*, which appeared in *Modern Language Notes* (Baltimore); G. Ohinard, *Trois Amitiés françaises de Jefferson* (Paris); Harriet D. Macpherson, *Editions of Beaumarchais in New York City* (N. Y.); and E. Seillière, *Pour le centenaire* (Paris), a summing up of the Romantic movement in the last hundred years. Useful to the teacher and student are Marguerite Lips, *Le Style indirect libre* (Paris), being an application of the linguistic theories of F. de Saussure to literary style; B. D. Wood, *Comparative Study of the Vocabularies of Sixteen French Text-books*, which appeared in the *Modern Language Journal* (N. Y., pp. 263-289); and F. D. Cheydeleur, *The American Council French Grammar Test* (Madison, Wis.).

Finally, the following miscellaneous publications may be noted: W. A. Nitze and E. P. Dargan, *History of French Literature* (2d. ed., New York); M. Roques, *Jules Gilliéron, 1854-1926* (Paris), a biographical and bibliographical study of the great dialect scholar; A. B. Kerr, *Jacques Cœur, Merchant Prince of the Middle Ages* (N. Y.); Vicomte G. d'Avenel, *Histoire de la Fortune française* (Paris), a study of private fortunes over a period of seven centuries; the second edition of W. H. Ward's *Architecture of the Renaissance in France* (N. Y., 2 vols.); H. Longnon and Frances W. Huard, *French Provincial Furniture* (Phila.); and E. M. Grant, *French Poetry and Modern Industry* (Cambridge, Mass.), a Harvard dissertation.

ITALIAN. C. H. Grandgent, *From Latin to Italian* (Cambridge, Mass.) is a historical outline of the phonology and morphology of the Italian language. Surveys of Italian literature include E. G. Gardner, *Story of Italian Literature* (N. Y.); and S. Morais, *Italian Hebrew Literature* (N. Y.). St. Francis, whose anniversary was celebrated in 1926, continues to be a subject of interest. P. Sabatier has edited a collection of commemorative essays entitled *St. François of Assisi, 1226-1926* (N. Y.). Other works relating to the Saint include a new edition of G. K. Chesterton, *St. Francis of Assisi* (N. Y.); S. Van Santvoord, *Saint François* (N. Y.); H. E. Goad, *Franciscan Italy* (N. Y.); and A. G. Little, *Some Recently Discovered Franciscan Documents* (N. Y.).

Miss Katherine Bregy of Philadelphia won the John S. Leaky Dante prize of \$1000 with

an essay on *Dante and His Vision of Life*. Other works on the great poet include John Jay Chapman, *Dante* (N. Y.); and W. Brewer, *Dante's Eclogues* (Boston), translated into English blank verse. H. Hauvette, *Laure et Pétrarque*, published in the *Correspondant* (Paris), was prepared for the centenary that was celebrated in France. Later periods of Italian literature were represented by L. Landucci, *A Florentine Diary from 1450 to 1516* (N. Y.); Julia Cartwright, *The Perfect Courtier* (2 vols., N. Y.), consisting of the life and letters of Baldassare Castiglione (1478-1529); and a new edition of the translation of *The Autobiography of Benvenuto Cellini* (N. Y.), by J. A. Symonds. Miscellaneous works include H. M. Ayres, *The American Student in Rome* (Rome); H. R. Marraro, *Nationalism in Italian Education* (N. Y.), a publication of the Italian Historical Society of America; R. Rampoldi, *Pavia nel Risorgimento* (Pavia); C. A. Cummings, *History of Architecture in Italy* (2 vols., Boston); the fifth edition of W. J. Anderson, *The Architecture of the Renaissance in Italy* (N. Y.); O. S. Tonks, *History of Italian Painting* (N. Y.); and H. D. Eberlein and R. W. Ramsdell, *The Practical Book of Italian, Spanish and Portuguese Furniture* (Phila.).

PORTUGUESE, PROVENÇAL, RUMANIAN. The second edition of the Spanish translation of F. de Figueiredo's *Características de la literatura portuguesa* (Buenos Aires) has now appeared. *Biblos*, an excellent bibliographical and literary review published by the University of Coimbra, is now in its third year.

W. P. Shepard, *The Oxford Provençal Chansonier* (Princeton, N. J.), contains an edition, with introduction and appendices, of an important manuscript of the Bodleian library. Mention should be made of C. De Lollis, *Poesie provenzali sulla genesi d'amore* (Rome).

G. Pascu, *La Philologie roumaine dans les pays germaniques et en France, 1774-1922* (Leipzig) is a useful survey. C. U. Clark, *Bessarabia* (N. Y.) is a history of that turbulent country.

SPANISH. The Instituto de las Españas has added the following interesting titles to its series: Fernando de los Ríos, *Religión y estado en la España del siglo XVI*; Rebecca Switzer, *The Ciceronian Style in Fray Luis de Granada*, and Iris L. Whitman, *Longfellow and Spain*.

J. Fitzmaurice-Kelly's valuable *New History of Spanish Literature* (London) has now appeared in a complete final revision made by the author just before his death.

The Hispanic Society of America has issued a "micro" edition of Covarrubias, *Tesoro de la lengua castellana* (N. Y.), thus placing at the disposal of students a very rare work of great use to scholars. The *Revue Hispanique*, the official organ of the Society, is now in its seventieth volume.

A contribution that may be considered almost indispensable to Spanish scholars is R. Menéndez Pidal, *Orígenes del español* (Madrid, 1926) which contains a survey of the various dialects of Spain until the end of the eleventh century. T. Navarro Tomás, who lectured last year at Leland Stanford, Columbia and other American universities, is the author of a *Compendio de ortología española* (Madrid).

Other works that deserve mention include the first volume of the *Estudios eruditos in memoriam de Adolfo Bonilla y San Martín* (1875-

1926), of which the first volume has appeared (Madrid); H. A. Deferrari, *The Sentimental Moor in Spanish Literature Before 1600* (Phila.), a doctoral dissertation of the University of Pennsylvania; W. J. Entwistle, *Additional Notes on Luis de León's Lyrics*, published in the *Modern Language Review* (London); E. B. Place, *La casa del placer honesto de Salas Barbadillo* (Boulder, Colo.); Caroline B. Bourland, *The Short Story in Spain in the Seventeenth Century* (Northampton, Mass.), containing a bibliography of the novels from 1576 to 1700; F. Cundall, *The Darien Venture* (N. Y.), an account of the Scottish settlement on the Darien coast of South America in 1698-1700; B. Moses, *The Intellectual Background of the Revolution in South America, 1810-1824* (N. Y.); C. E. Chapman, *History of the Cuban Republic* (N. Y.), extending up to the time of American intervention; W. Thompson, *Rainbow Countries of Central America* (N. Y.), a useful study of economic conditions, customs, etc. of Costa Rica, Nicaragua, Honduras, Salvador, Guatemala, etc.; and A. Hamilton, *A Study of Spanish Manners, 1750-1800* (Urbana, Ill.), as derived from the plays of Ramón de la Cruz.

PHONETICS. *Phonetic Transcription and Transliteration* (N. Y.) contains the proposals of the Copenhagen Conference of April, 1925. J. S. Greene and Emilie J. Wells, *The Cause and Cure of Speech Disorders* (N. Y.) is a textbook on stuttering, stammering and voice conditions. With special reference to English, we have H. E. Palmer, J. V. Martin, and F. G. Blandford, *Dictionary of English Pronunciation with American Variants* (N. Y.), supplying the pronunciation of about 10,000 words in common use; and W. A. Craigie, *English Vowel Sounds* (N. Y.), a tract of the Society for Pure English. The third edition of T. Navarro Tomás, *Manual de pronunciación española* (Madrid) is a most welcome work.

PHILOSOPHY. The year 1927 can hardly be said to have been extraordinarily productive as far as philosophic output is concerned. To be sure, philosophic productivity, both qualitatively and quantitatively, was not inferior to that of the average of the preceding years. What the reviewer, however, misses is not so much new books, well written books, as new issues, new approaches. The "new storm of constructive speculation" foreseen last year by Professor Perry in his *Philosophy of the Recent Past* still lies in the bosom of the gods. The lull still continues. It seems as if the contending parties, tired of an interminable intellectual war, had agreed to lay down their arms and decided to bend henceforth their energies towards finding a convenient formula which might serve both as an excuse for the conflict and as a device for saving appearances.

If Hegel were to come to life, he would find, to his great dismay, that his labor to save the civilized world from the disgrace of living without a metaphysics has turned out to be Sisyphean. The metaphysical stone is again on the point of rolling down hill. For if the philosophical literature of 1927 has brought out anything clearly it is that the era of metaphysics, which had been given a new lease of life by the militant fervor of the Neo-Realists, is again on the wane. If problems of being are not made to yield place, entirely, to problems of knowledge, the recognition is at least growing that

the rays of being have to be refracted first through the prism of knowledge. Methodology is thus the new slogan. The method advocated is, however, not the universal method of Descartes; it is not conceived as an organon of reason revelatory of the formal structure of reality. It is taken in a pluralistic sense, it is assigned either the function of devising economical instruments for cognitive technique or else of giving rules to be followed in playing aesthetically satisfying games.

Outwardly this tendency assumes the form of an attack on science. In the front line of this onslaught is to be placed *Science, The False Messiah*, by C. E. Ayres—a book more dazzling than illuminating. The author constantly presents empty-shelled epigrams apparently meant to soothe the nerves of those who were overstimulated by theological narcotics. Functionally science is held to be artificial, inasmuch as it is nothing but a sort of by-product of machine technology, never rising beyond the machine it uses, never touching the central problems of life; structurally it is fictitious—it is a new form of folk-lore and theology. It is evident, that science is made by Mr. Ayres into a scapegoat for the sins committed by the pseudo-scientist, who, for reasons of popular appeal, gives out the facts and laws of science in as final, dogmatic, and inexorable a form as that in which theology used to clothe its beliefs and commandments. Real scientists would rather find a confirmation of their practices in the following words of Santayana than in the pontifical pronouncements of Mr. Ayres: "It is perhaps the best sign of a scientific, as distinguished from a doctrinaire, temper not to lay great store on science itself, that is, on its form, language, and theories, but to keep it plastic in the presence of its existing subject matter and of the spontaneity of the human fancy, which at any moment may suggest new methods of notation, new abbreviations, new syntheses."

A book dealing not so much with the functional side as with the structural side of science is *The Logic of Modern Science*, by P. W. Bridgman. By combining the empiricism of Mach with a kind of physical behaviorism, the author tries to dethrone science from its Platonic heights. Not only the matter of science but also its formal elements have to be relegated to the domain of becoming. The partly logical, partly physical categories, such as cause, time, space, identity, are classed together with strictly physical concepts like mass, velocity, force, energy, electricity, and light. They are shown to be not so much pervasive features of reality exempt from all fluctuations and change, as working tools which have to be constantly reshaped, often even to be discarded, in the course of the advance of science. Every concept has to be defined operationally. We know what a concept is when we know what operations must be performed in order to produce an instance of that concept. Our author's logic turns out to be after all a disguised psychology, for to make measurement and operation the criterion of science is of a piece with the Humian attempt to make observation the limit of knowledge. The true view, certainly, is that of Russell, for whom the rejection of absolute time and space by recent physical science is something not at all motivated by operational considerations. "That we can only observe within relative positions," says Mr. Russell, "is of

course true; but science assumes many things that cannot be observed for the sake of simplicity and certainty of causal laws. . . . The inference to absolute time and space must be treated as on a level with any other inductive inference."

Science has also to listen to a good deal of censure in the pages of Mr. Scott Buchanan's *Possibility*. It is a work written, in spots, with great literary charm, and it betrays on the part of its author an uncommon ability to view the vast panorama of theories focally, as well as to vivify their grayness and abstractness by a breath of an appreciative imagination. A few quotations will illustrate his views: "The 'knowledge' which we have in our great scientific systems is not genuine knowledge." "The formulas and laws that science precipitates are its own ghostly memorials. . . . They are hypotheses, imaginative journeys, visions of another world."

In short, science consists in part of folklore, in part of technology, in part of esoteric mysteries (that is to say, in its mathematical and logical aspect). What Mr. Buchanan really aims at with his missile is metaphysics. Science is scolded mainly for its trespassing on the sacred grounds of being. For being in itself, being in its absolute and unconditioned character, can never be grasped in discursive knowledge—the only kind of knowledge that comes to light wherever expression is used. Discursive knowledge is never self-centred, it is always in perspective. It is always a projection from a certain point of reference. When we know anything it is always pertinent to ask in reference to what. Our discursive knowledge is never categorical—we can never be sure that there are no other alternatives to what we know. Such knowledge has for its field not unconditioned reality, but the realm of the possible. And in this respect there is no difference between metaphysics, science, or art. They are all of them the outer garments in which thought clothes itself when it becomes discursive.

In this dialectical æstheticism methodology celebrates its Valpurgian night. Mr. Buchanan frankly states that his aim is not to solve problems. After responsibility for the universe has been thrown to the winds and a release has been obtained from the bonds of reality, intellectual life becomes a midsummer night's dream. The adventurous soul may imagine that it is very easy to fly in this tenuous medium. But unfortunately he will soon find out—if he takes his adventure seriously—that flight in a vacuum is impossible. And he will also find out that it is rather difficult to escape from the iron hand of reality—like Cain he will come to admit that it is impossible to hide from God.

A cognate philosophical impressionism finds expression in two of Santayana's works that were published this year: *Platonism and the Spiritual Life* and *The Realm of Essence*. In the first named work the author tries to kill two birds with one stone. We are told in the first place what the spiritual life is, and in the second place not to identify it with Platonism. The spiritual life is a kind of art for art's sake. It is a care-free life, untrammelled by any obligations, attachments and allegiances, having no axes to grind, and possessing no interest except disinterestedness. On the spiritual plane the mind reveals unchecked in its own ghost-like visions, and

roams over the infinite, untroubled, timeless and spaceless realms, seeing things "in their eternal aspects" and in "the dimensions in which they are not things but pure essences." The spiritual life is thus made to stand for all those things with which Mr. Santayana himself is in love. His great bugbear is morality, which is always for him a case of special pleading. "Human morality, for the spirit, is but an inevitable and hygienic bias of one race of animals," he writes. Hence the spiritual life will have nothing to do with it, and hence too will it have nothing to do with Platonism. For Platonism is essentially a political and moral philosophy—a philosophy vitiated by humanistic values. "In Platonism as in Christianity, the spiritual life is not pure but incarnate in a particular body of dogma, historical and cosmological: both systems are pledged to the magic ascendancy of certain supernatural powers, posited in order to guarantee certain particular human values."

In *The Realm of Essence* the special objects of the spirit receive a positive and more elaborate treatment. Mr. Santayana returns here to the problems he had set himself in *Scepticism and Animal Faith*, published in 1923. He treats of the essences which the spirit contemplates, and he offers us a careful geography survey of the infinite, eternal and morally neutral realm of the possible, as well as a suggestion as to the nature of the relationship under which its inhabitants enter the human mind. Incidentally he gives us illuminating indications on the status of dialectic as the internal movement of thought and on its relation to the conditions of its environment.

A much more important function than that of an otiose contemplation of a fleeting dream world is assigned by Bertrand Russell to knowledge in his two recent works, *The Analysis of Matter*, and *Philosophy*. Knowledge is here given a decidedly existential bearing. *Philosophy* is largely a more popular rendering of the most important parts of the *Analysis of Matter*. The latter work, on the other hand, is the long-expected sequel of Mr. Russell's *Analysis of Mind*. Mathematical logic, psychology, and physics are summoned here to throw light on a problem which stands to-day in the centre of attention of the philosophical world. The book moves within the circle of ideas displayed in the recent works of Whitehead and Broad. Its main theme is the relation of matter to existence, or the ontological status of the theoretical objects of physics and their relation to common sense perception.

The gulf between physics and perception is due, in Russell's opinion, to our erroneous conceptions of both mind and matter. All our difficulties will disappear as soon as it is realized that "matter is less material and mind less mental than is commonly supposed." Accordingly, the physical world is assimilated to, and made continuous with, the world of our perception, which is the same thing as mind. The universe is composed of only one kind of stuff, namely events. A percept is a mental event occurring in a brain and having, like a non-mental event, both a temporal and a spatial component. What distinguishes mental events as such is the fact that they are subject to the law of association or of the conditioned reflex, which by the way is the characteristic of living bodies. On the other hand, matter, as it appears

in recent physical theories, has lost all the characteristics which it has for common sense. "It has become no more than a convenient shorthand formula for stating certain causal laws concerning events." The ultimate constituents of what stands for matter, namely the electrons and protons, have been deprived of substantiality, solidity, impenetrability, identity, and even of permanence. There is nothing to hinder the entrance of the ghostly non-mental events into a happy marriage with the congenially tempered non-mental events.

In spite of the brilliancy of exposition, the reader of these works will have good reason for disappointment. It may be granted that mind and matter may be conceived in Russell's terms, but it is rather difficult to see how this can help us in solving our initial problem. For the solution of our problem it is immaterial whether percepts are regarded as states of mind or as mental events, as long as they have the chief properties of mental states. For Russell, just as for the old-fashioned dualists, what we directly and exclusively know is percepts.

Hardly any traces of realism are left in Russell's philosophy. Russell's metaphysics turns out to be—in spite of his assertions to the contrary—unlike that of the phenomenologists. In other words it becomes entirely absorbed in epistemology. About the ultimate constituents of the world we are in complete ignorance. His neutral monism sounds suspiciously like the Kantian thing-in-itself. No more than the phenomenologist and the pragmatist has he a right to say that through his analysis he has succeeded in doing away with fundamental metaphysical categories like substance. Scientific categories are in his analysis nothing but descriptive formulas that lend themselves conveniently to purposes of most economical calculation. Within a descriptive system, substance may have the meaning which Russell gives to it, namely of "a series of occurrences linked together in some important way." The reality of substance is, however, hardly touched by this pragmatic definition. The limitations of Russell's philosophy are the limitations of a philosophy which has staked its fortunes without reservation on science. Russell's new books offer a new confirmation of this old truth.

PHOSPHATE. See **FERTILIZERS.**

PHOSPHATE ROCK. During 1927 the American phosphate rock industry, which is centered principally in Florida and Tennessee, experienced no active development of new properties or new processes over the preceding year, although the mines in Tennessee which were subsidiaries of large fertilizer concerns operated

at a fairly steady rate throughout the year. There was, however, activity in the construction of plants to produce phosphoric acid direct from phosphate rock by means of electric furnaces, and pyrolytic processes for the purpose of turning out fertilizer compounds similar to those produced in Germany. There was also a movement on the part of State experiment stations, to develop the use of finely ground phosphate to be applied directly as a fertilizer to the soil and used in animal feeding as a substitute for bone products, on account of the growing scarcity and increased value of these materials. The various agricultural and other developments indicated greater activity for the Tennessee fields in the future. According to the U. S. Bureau of Mines, 3,166,102 long tons of phosphate rock were sold in 1927, having a total value of \$11,234,863, which represented a decrease in quantity of 1 per cent and an increase in value of 3 per cent, as compared with 1926. Florida continued to lead in the production of phosphate rock, being the source of 83 per cent of the product sold or used by producers in the United States in 1927, or of 2,637,420 long tons, with a value of \$8,646,162. Tennessee produced 477,172 tons in 1927, Idaho, 45,260 tons; and Wyoming 6,250 tons. The total imports of phosphate rock into the United States in 1927, amounting to 28,195 long tons, valued at \$292,871, showed a marked gain over 1926 of 62 per cent in quantity and 52 per cent in value. The exports for 1927 totaled 918,256 long tons, valued at \$4,733,174, an increase of 23 per cent in quantity and 7 per cent in value as compared with 1926. See **FERTILIZERS.**

PHOTO-SYNTHESIS. See **BOTANY**, under *Physiological Studies*.

PHYSICS. The year 1927 was notable, perhaps even spectacular, in physics. The discovered measurable variation in the length of the day develops the startling fact that the second, our unit of time, is changing. The ether drift reported is refuted—relativity wins another victory. Unprecedented voltages are now available for research with the prospects of six million in the near future, as reported by Rutherford. X-rays are discovered to increase gene mutations incredibly with a wonderful outlook for experimental evolution. Wave mechanics continues to add to its successes by accounting for atomic phenomena without special assumptions. Ultra-violet technology is establishing a new industry. By physically controlled conditions nature's production of petroleum has been duplicated and all its by-products produced synthetically. Aladdin-like powers are being given mankind by the photo-electric cell in devices which mechanically respond to commands that are given by the human voice.

The Nobel prize men for 1927 in physics were Wilson and Compton—Wilson whose wonderful genius visualized for the world the tracks of ionizing particles, permitting us to photograph the tracks and count their number, observing every twist and turn of their paths; Compton whose new theory of X-rays as rapidly moving particles, photons, which bounce from electrons losing energy in the rebound, battled its way into world-wide acceptance, accounting for the diminished wave length in exact accord with experimental measurements.

Adams confirms the red shift of the light of the companion star to Sirius in quantitative

agreement with Einstein's theory and Eddington's computation therefrom. Meggers and Kiess find the red shift for light of moderate intensity only, thus far confirming Einstein. Kennedy finds zero result from his duplication of Miller's ether drift experiment, reporting that with Miller's apparatus the reported effect would be simulated quantitatively by very small differences of pressure and temperature within the apparatus, .00004 in pressure, .002° in temperature. With improved technique capable of detecting one-fourth of the previously reported effect, Kennedy finds no evidence of ether drift.

Bucherer was preparing to test whether light from a moving source spreads out in the ether as it would from a source at rest. His set-up is a straight tube transverse to the earth's motion. He will send a beam of light through its centre and it should strike the side of the tube instead of emerging from it, as the tube is carried forward by the earth.

The velocity of light, $299,796 \pm 4$ km/sec., as determined by Michelson is indebted to Bowie of the U. S. Coast and Geodetic Survey for the accuracy of the base line measurement unprecedented in geodesy, being correct to 1 part in 6,800,000.

Jeans discusses the final or "white dwarf" stars, whose temperature, about a thousand million degrees, ionizes completely the stellar atoms, stripping them of electron shells, so that further contraction of the star is impossible. Bowen concludes that the mysterious "nebulium," long thought to be a strange element in the glowing gases of distant star groups, is merely the metastable state of oxygen and nitrogen. Freeman discovered argon in the sun's corona by spectrum analysis during solar eclipse.

Storner, in his stereophotograms taken from points in Norway 26 km. apart, finds that the higher auroras, 600 to 800 miles high, were illuminated by the sun throughout, down to 300 km. High auroras were red, blue, or violet; low auroras, greenish yellow. The astonishing result will throw light on the origin of auroras through spectroscopic studies of the conditions holding in the upper air.

Sun power is of perennial interest and discussion. Stewart computes that the sunlight falling on Philadelphia equals in power 100 Niagaras of 4,000,000 horse power each. The sun's total radiant energy, 3.70×10^{33} ergs per second, at one cent per kilowatt hour, would give for the sun's power output a value of a billion dollars each billionth of a second. He discusses the latest physical theory of the origin of the sun's heat and the possibility of its more complete utilization, especially by the discovery of the technique of releasing atomic mass-energy. This discovery rests with the physicists and the faith that it will be accomplished is implicit in the popular mind.

The variable rotation of the earth is the startling headline of the announcement by Boss that the systematic errors in right ascension are attributable to a secular change in the rate of rotation of the earth. The change appears to be periodic with a period of 80 years and a cumulative total drift of 40 seconds in this time. The rhythms are diurnal, monthly, and annual, duplicating the three chief tidal periodicities, indicating that the cause is to be found in the tidal forces acting upon the body of the earth. That a gradual shortening of the mundane day

is occurring has long been believed but that the day had a periodic variation is a surprise. The significance is that our unit of time is changing and it may be necessary for us to find a clock more constant than the turning earth, perhaps in the frequency rate of cadmium red radiation.

Standard time was being broadcast twice daily on short wave radio from the Naval Observatory and might be picked up almost anywhere on earth. It was announced as being based on Greenwich mean time. Wade uses the Dufour oscillograph and a stream of electrons to record graphically high-frequency electrical oscillations, each wave of the recorded graph corresponding to one one-hundred-millionth of a second. Beam uses his own new method for short time measurements to determine the order of appearance of various spectral lines and to measure the actual time interval between the appearance of the various lines of Mg, Cd, Zn, H, N, Hg, and He.

The oscillation of the earth's axis caused by the sun's activity is suggested and discussed by Kolisko who regards the earth as a magnet vibrating with an eleven year period in a magnetic field. A field of intensity of 6.5×10^{-8} is found—almost the same magnitude as Newton's gravitation constant. He gives an estimate of the average earth current.

Researches in the nature of the under soils were being made, using the phenomena of the propagation or reflection of Hertzian waves. Howard gives a theory that the earth's heat is evolved when the lightest isotope of an even-numbered atom becomes an odd-numbered atom by losing a proton which in turn goes to form a hydrogen atom.

Stetter publishes new results of atom-shattering or disintegration, confirming his previous work qualitatively and quantitatively. Both Holoubeks and Schmidt contribute to the verification. He uses the Wilson method, the ionization method, and the photographic method, showing samples of the H-ray paths. He also has used a modified form of the mass spectrograph.

Bridgman adduces thermodynamic evidence for his suggestion that, under high pressures at ordinary temperatures, the atomic quantum structure breaks down into electrons and protons, constituting an "electrical gas." He holds that atomic dissociation occurs at high temperatures and low pressures as in the atmosphere of stars, and at high pressures and relatively low temperatures such as we have in the interior of stars, possibly in the sun, certainly in the dark Sirius type stars.

Saha presents an interesting new scheme for showing the periodic system of the atoms, giving a clear and unified view of the entire field, especially the origin of the optical and X-ray structure and the periodic properties of the atoms. While no new principles are involved, the graphic form of presentation is new and vivid.

The Bohr atom has given way to "wave-mechanics" as the centre of interest. The astounding concordance of computed and observed magnitudes gave the Bohr atom an entrenched position, making it the best known of modern theories of science; the wave mechanics gives a most fruitful point of view mathematically effective where the Bohr theory had met the impasse of the unsolved problem of three-bodies. De Broglie and Schrödinger with their beauti-

fully developed wave mechanics have a hypothesis of a mass particle enveloped and surrounded by a wave system. Stimulated by de Broglie, Schrödinger was able to parallel Bohr's explanation of whole numbered radii for permissible orbits and develop wave mechanics with great power. He showed by the Hamiltonian principle how a group of waves follows the path which a mass particle would observe in ordinary mechanics. Both the static and Bohr models are apparently incompatible with the Schrödinger atom, although Sommerfeld says that there can be no thought of giving up the Bohr theory. The newer atom depends upon the change of energy density. If the density is greatest at the centre and slight at the surface, we have the simpler case, and the smaller the sphere, the higher the frequency of fluctuation. More than one mode of vibration may occur in a single sphere. The new atom is electrical, but the charge is not discontinuous and is subject to fluctuations. Pauling claims a direct experimental verification of the form of Schrödinger's "Eigenfunction," finding a function which permits estimation of the electron distribution in atoms and ions and of inter-atomic distances.

While perhaps equally able as the Bohr atom to account for "permissible and forbidden" zones, the Schrödinger atom allows vibration without radiation—a fact which, Bohr had to assume, follows naturally in wave mechanics. The relative intensity of spectrum lines, however, also follows from the new theory—a real triumph. It also replaces the elliptical and circular orbits, provides for the equivalent of the azimuthal quantum number and gives an interpretation of half quantum numbers. Current opinion on present showing favors the Schrödinger atom, but without doubt the Bohr theory will be retained when it is desirable to picture atomic relations.

If a free electron is considered a fluid with a resonance frequency, this implies that the free electron is attended by a wave train going in the same direction as the electron with wave length dependent on its speed. An experimental discovery of the utmost significance was that of Davison and Germer who found that free electrons are actually accompanied by such wave-trains, diffrangible by crystals, and carrying their electrons wherever they are diffracted. A suggestive analogy is the system of resonances of a vibrating box full of air. It may be recalled that Lodge long ago pointed out that the radial variation of the natural period frequency of a vibrating circular disc follows a law—the equation of which resembles and suggests the radial inverse frequency relations of the Bohr atom.

Jordan shows that the four new forms of quantum mechanics—matrix, Born-Weiner, wave mechanics, and the theory of the q -numbers—are special cases of a more general theory. Certainly we may expect current theories to contribute each its own full quota because of the unique mode of attack, toward the ultimate theory of the structure of matter and energy, correlating the two so completely that one may be transformed into the other at will.

It is predicted that electron scattering research opens a new era for atomic physics which will be more concerned with momentum exchange between electrons and matter than with energy exchange. Conditions of electron reflections differ from those of X-ray reflections. The

scattering power of atoms is far greater for electrons so that the surface layer of atoms plays a prominent part and a crystal reflects more like a crossed grating than a space lattice. An appreciable range of equivalent wave lengths therefore can be reflected with a fixed angle of incidence through various reflection angles. The contraction factor is equivalent to assuming a refractive index of .7 for the crystal. Hence the angle of maximum reflection is not equal to the angle of incidence referred to the effective crystal plane.

Brilaou suggests that a bundle of electrons as affected by a magnetic field may permit experiments on the magnetic moment of the Bohr magneton. The spinning electron is treated by Stoner. The doublet character of a 1-valence electron system is accounted for by splitting levels caused by magnetic interaction between the electron and the rest of the atom. Gaudsmit and Uhlenbeck postulated an electron with half a Bohr unit of angular momentum. Since the spin in orbital rotation may be of like or unlike electron, a single level is split into two, for the spinning electron will precess as it moves in its orbit as in a magnetic field. Heisenberg and Jordan show that, with the electron spin and relativity effect taken into account, the true relativity formula is given by the new quantum matrix dynamics.

After experiments in which light from a single vibrating atom (instead of many as in ordinary light sources) is considered, the possibility is advanced by Dempster that the "quantum" may be divided. Falling on a lightly silvered mirror, part of the light was reflected and part passed through. Upon recombining the light, the same patterns and dark bands were produced as from ordinary light.

Aston's new mass-spectrograph yields data determinable to 1 part in 10,000, adjacent lines being separated if the masses differ by 1 part in 650. A great advance is being made of exact atom mass expressed as "packing fractions" or the difference between an atom-mass (on the scale $O=16$) and the nearest integer ("mass number") divided by that integer. He finds that the ratio $H:O$ is 1.00778:16; $He:O$, 4.00216; $C:O$, 12.0036:16 (final digits uncertain). F and the predominant isotopes of Ne and S have practically integral mass-numbers; tin has 11 isotopes, 4 odd, of which one is an isobar of an isotope of another element (exceptions to announced rules). The packing fractions of the isotopes of Xe and Sn are sensibly identical, contradicting *a priori* theory.

As atoms give line spectra, so molecules give band spectra. A review of Johnson surveys the astonishing advances of the past two years in band spectra, progress which suggests that the time is near for an understanding of band spectra and molecular structure so complete that physical properties of molecules may be computed from known constants and chemical changes placed on a mathematical basis.

Meggers and Burns published studies of the hyperfine structures in the La_{11} and La_{11} spectra and suggested that the moment of momentum of the atomic nucleus is responsible for these hyperfine levels. They have also determined directly the wave length of 350 standard solar lines in terms of neon standards, while Babcock used the interferometer with 507 lines on the same scale. These permit interpolating other

lines so that all solar spectral lines may be placed upon the International scale.

Slater deduces the helium spectra by a new method from the wave equation. Variables are not separated, two degrees of freedom are assumed, the method being applied to the wave equation of helium with its six variables, the coordinates of its two electrons. Remarkable agreement is found between computed and observed wave numbers and quantum defects, 24.48 and 24.35 being the observed and computed ionization potentials respectively.

Compton and Doan measured the characteristic wave lengths of Cu and Mo, using a ruled spectrum grating having 200 lines per millimeter. Thibaud studied the spectra of C, Mg, Al, Fe, Cu, and Pb between the limits 140 to 6000 Å, using a vacuum spectrograph with a glass grating having 200 lines per millimeter. Hunt, using a similar grating, has studied the K alpha lines of C and Al, and the alpha lines of Cr, Fe, and Cu.

Lawrence and Beams using light pulses of short duration through nicol prisms, conclude that "if light-quanta are of the commonly understood wave nature, they are less than three centimeters in length and an electron absorbs a light-quantum photo-electrically in less than 10^{-10} second." The result is stated to agree with Swann's theory of light and the new quantum-wave theory of Thompson.

New resources of great power were available for physical research. There were in use 2,800,000 volts and a plant was planned to give 6,000,000, approaching the voltage (7,600,000) of ejection of the alpha particle from radium C, exceeding the swiftest beta ray voltage (3,000,000). More than 2,000,000 volts will give X-rays equal to gamma rays in penetration. The extension of X-ray analysis to long-chain compounds was unexpected but welcome in the complex technique of the organics. During the year X-rays were found to produce gene mutations in a high proportion of the germ cells treated, giving biology a new means to speed up experimental mutation incredibly for experimental evolution research.

Tropsch was able to obtain by synthesis every kind of compound present in crude petroleum ranging from gaseous methane to solid paraffin waxes, using water gas as the basis. He obtains liquid motor fuels by the high-pressure hydrogenation of coal or through water gas by catalysts. Gas mixtures like those he makes use of are found in nature, as also are the necessary catalysts. Hence he believes he duplicates nature's production of petroleum. Incidentally the method appears to be the only one which permits us to conclude that nature is still producing it.

Astbury surveys the problem of complex structures from the view point of crystallography and X-ray analysis, noting how in recent years the theory of internal structure has made possible the "gigantic task" of classifying all crystalline substances according to their structural features. The new view is surely an advance over the old classification by external form. The great value of crystallography is recognized now that we know that practically every solid thing is crystalline and that electric charges are the binding forces of crystals. Bentivoglio measures the growth of crystals, finding that initial irregularity, where all faces are alike,

does not affect the rate of growth of its faces. Misshapen crystals have no tendency to correct irregularity by unequal rates of growth on the faces, but initial differences merely become smaller fractions of the whole. In complex forms unlike faces grow at unlike rates, like faces at the same rate, with uniform concentration of solution. Bentivoglio also has constructed ideal forms for each crystal as they would grow at the rates observed.

Wright compares the behavior of polarized light with that of moonlight to ascertain the composition of the moon's surface. Basalt is missing, but pumice and granite are reported. Coblenz publishes results on the light from decaying woods. Pierantoni finds that germs introduced into the eggs of insects produce light-control mechanisms in the insect's bodies, finding also that light-giving bacteria are present in luminous deep sea fishes.

Wilcox publishes an account of the successful "prevention" of lightning in safeguarding petroleum tanks. Applied physics has solved the problem of lightning "prevention" by wires from which the corona discharges pass, continually neutralizing the charges of the cloud.

A new use is added to the multitude of uses of the electron tube, namely to synchronize the wave phase of alternating currents of power generators widely separated but pooling their current into a common supply.

A theory of ferromagnetism based on atomic magnetostriction confirms the ideal quality of permalloy. Once more lack of faith has been rebuked by actual achievement. Magnetization is found to alter the size of a specimen by a few parts in a hundred thousand, heating the metal, wasting energy as hysteresis loss. Iron lengthens while nickel shortens in the direction of the magnetic axis, so that a rightly proportioned alloy should show no magnetostriction. So it proves. McKeehan states that the computed critical composition lies in the region where the magnetic behavior of permalloy has been found to be the most strikingly abnormal. The easy magnetization of permalloy seems due to the conspiring of iron and nickel atoms to make their magnetic changes in harmony, avoiding shock and energy loss, to which iron and nickel are separately subject.

The year was very fruitful in acoustical research and its practical applications. Theremin in Leningrad produced an astonishing musical instrument based upon the beat notes in electron tubes, in which system the units are so disposed that beautiful music, controlled by motions of the hands in space, is produced of a most unusual quality and modulability. Richardson points out that sound propagation is a new means for research on technology in connection with the physics of the globe. The seismograph and the success with which it records vibrations have suggested internal explosions artificially produced to explore the nature of the crust of the earth and its structure.

Loomis and Hubbard, using super-sound waves and a sonic interferometer, determined sound velocity through liquids, finding, for example, that sound waves travel through pure water at 60 degrees Fahrenheit, at a speed of 4850 feet per second.

Of extraordinary interest and possibilities was Gault's experimental "teletactor" designed to enable the deaf to hear through their finger

tips, feeling the components of sound waves instead of hearing them. Amplified vibrations are allotted in frequency groups, operating a diaphragm for each finger—the thumb responding to speech vibrations below 250 per second, the little finger to those over 2000 per second, the other fingers dividing the range between, from 250 to 2000. The amplitude may be made an optimum for each finger. With practice, vowels, consonants, and even the words may be identified.

Whipple's experiments with firing of big guns showed that sound, inaudible at 20 miles' distance, may be heard at a hundred miles as a result of the refraction of sound waves by the Heaviside layer above the earth's surface. In another experiment, a gun shot on the English coast was heard 35 miles away at Birmingham University by a new direct sound-sensitive receiving device.

Making audible the impact of single atoms is an astonishing use of the electron tube amplified. Ortnor and Stetter have made hydrogen rays audible by loud speaker, using polonium as a source of alpha rays and paraffin as impacted material, permitting a quantitative count to be made of ejected H-particles. Kranz illustrates the effectiveness of his mechanical harmonic synthesizer by a graphic synthesis of the first forty harmonic components of two separate infinite series. The purpose is the study of sound, but it has general uses as well.

Manville reports that the waves which transmit television may now be impressed as wavy grooves like graphophone records and be used to produce anywhere, as often as desired, the moving scene originally recorded.

Perhaps the outstanding scientific event of the year was the first exhibition of perfected television developed under Dr. Ives and his chief, Dr. Jewett. Full accounts were promptly published and again those who had doubted were confronted with the demonstration of an achievement once considered impossible.

Quite as astonishing is the feat of applied acoustics displayed in the tele vocal system by which operatorless machinery is controllable by the voice. Wensley states that the spoken words "Open Sesame" and no other combination of sounds will cause a door to open, by a system of selective sound-sensitive relays which makes it possible to start or stop machines, open or close switches, or perform any other operations at will.

In London a train was experimentally started and stopped by radio transmission of the human voice with the words "Off" and "Stop."

The year, finally, was notable for the completion of the first national radio beacon for the first American airway. The beacon consists of a beam of radio which automatically indicates whether the plane is on course, or off to the right or to the left. It is suggested that eventually the radio beacon itself may function to keep the plane on course—surely a fitting control for the new art of aviation on national air highways.

PIERCE, HENRY CLAY. American oil pioneer, died in New York on June 27. He was born in Jefferson County, N. Y., in 1849, attended public school until he was 16 years

old when he was employed as clerk in a bank at St. Louis, Mo., and that city remained his headquarters for the major part of his career. In 1870 he became distributor for an oil refinery in St. Louis, and three years later established the Waters-Pierce Oil Company. Early detecting the possibilities of oil development in Mexico he extended his operations and in 1896 he had a leading position in the Mexican oil business. He also acquired control of the Mexican Central Railway. The magnitude of Mr. Pierce's operations brought him into contact with banking and financial interests and this developed into a memorable clash. The Standard Oil Company obtained ownership of two-thirds of the Waters-Pierce Oil Corporation stock, but he managed to hold the direction of the company. When the Standard Oil was dissolved under an anti-trust law decision, the Rockefeller group endeavored to put its own representatives at the head of the Waters-Pierce business. Mr. Pierce opposed this move in the courts and succeeded in forcing the sale of the Rockefeller holdings to himself. He was director of many railway, steamship, trust, and fuel companies.

PITTSBURGH, UNIVERSITY OF. A non-sectarian coeducational institution of higher education, at Pittsburgh, Pa.; founded in 1787. The total autumn enrollment for 1927 was 9923, distributed as follows: college, 2070; engineering, 414; mines, 87; business administration, 665; education, 977; graduate, 764; medicine, 254; law, 260; pharmacy, 442; dentistry, 486; retail training, 15; downtown division, 2255; extension students, 1254. The summer session had a registration of 2432. There were 875 faculty members, of whom 96 were new appointments, as follows: college, 61; education, 6; mines, 1; medicine, 1; law, 2; dentistry, 1; physical education, 2; officers of administration, 2. The library contained about 110,000 volumes. The productive endowment amounted to \$1,545,951.60. The year's expenditures were \$3,492,233.60. Income from the State Legislature of Pennsylvania was \$505,938,295.34. Developments during 1926-27 included the establishment of a department of fine arts; the organization of a division of research in higher education; the establishment of a junior college at Johnstown, Pa., and of the extension centre, at Erie, Pa., under the direction of the University extension division; and progress on the construction of the "Cathedral of Learning." A total of \$2,600,000 was also subscribed for the Presbyterian Hospital Unit of the University's medical centre. Chancellor, John G. Bowman, LL.D.

PLATINUM. It was estimated that the stock of platinum on hand in the United States at the beginning of 1927 was the largest in ten years. At that time the amount of platinum in the hands of domestic refiners amounted to 64,203 ounces, or 45 per cent more than at the beginning of 1926; palladium stocks amounted to 31,950 ounces, or 19 per cent more than in the previous year. The United States production of new metals of the platinum group totaled in 1927 about 4200 ounces of platinum, 3000 ounces of palladium, and 30 ounces of iridium, which was less than in 1926. As a result of the announcement in April, 1927, that the Russian output of platinum was to be sold in the American market through the Amtorg Company, the selling price of platinum, which at the beginning of the year was quoted officially at \$112, and which at the end of March was around \$101-\$103, continued to fall and reached a low of \$62.50 by the end of July. The usual fall increase in platinum metals buying for the Christmas trade was not noticeable and the American market was in a somewhat disorganized condition.

Of the imports, which were erratic for the year, the most consistent supplies came from England, while France supplied only a small portion of the total imports for the year. Some shipments were received from Germany, Australia and Canada, and about 3000 ounces of crude platinum were imported monthly from Colombia, the latter country having decreased its output in 1927 to approximately 60,000 ounces, while Canadian nickel refineries showed an increase in both platinum and palladium for the year as compared with 1926. Russia was continuing her policy of building up the platinum industry, but little authentic information was available.

The imports of platinum into the United States, in the form of grains, nuggets, sponge, or scrap, during 1927, amounted to 90,491 troy ounces, valued at \$7,480,869, as compared with 87,162 ounces valued at \$8,683,359 in 1926. Platinum ingots, bars, sheets, or plates, amounting to 38,053 ounces valued at \$3,707,062 were imported in 1927, as compared with 26,585 ounces valued at \$2,995,562 which were imported in 1926. See GEOLOGY.

The U. S. Bureau of Mines reported that new platinum recovered by refineries in the United States in 1926 amounted to 76,154 troy ounces, while in the same year 38,795 ounces of secondary platinum were recovered by dealers and refineries in the United States.

PLAYGROUND AND RECREATION ASSOCIATION OF AMERICA. An association organized in 1906 by Theodore Roosevelt, Jacob A. Riis, Luther Halsey Gulick and others, for the purpose of binding together in a national body the efforts growing up in various parts of the country to provide safe and adequate areas where children might play under experienced leadership. A staff of field secretaries maintained to assist cities in organizing year-round recreation programmes for children, adults and the community as a whole, to secure municipal appropriations and to strengthen existing programmes, also works to secure state legislation for facilitating the development of municipal recreation programmes. Other phases of the As-

sociation's work include: the maintenance of an employment service for recreation workers and a correspondence and consultation bureau where attention is given to letters of inquiry and personal conferences on local work; the supplying of practical suggestions and literature to amateur dramatic groups and the preparation and distribution of programmes for holiday and special day celebrations; and assistance to negro groups in securing recreation opportunities. The community music service assists in organizing music groups, in training volunteers, and in providing an exchange for community music information.

A National Training School was established in 1926 to provide graduate courses in professional recreation training. The National Physical Education service of the Association is active in sponsoring physical education legislation. *The Playground* is its monthly publication, in addition to which there were distributed in 1927 *A Nature Almanac*, *88 Successful Play Activities*, a weekly bulletin service, books and pamphlets on all phases of the play movement, and other handbooks and pamphlets, while a publication *Parks—a Manual of Municipal and County Parks*, was compiled and was practically ready for distribution at the end of the year. The Fourteenth Annual Recreation Congress of the Association was held at Memphis, Tennessee, in October, 1927. The officers for the year were: President, Joseph Lee; treasurer, Gustavus T. Kirby; secretary, Howard S. Braucher. The headquarters are at 315 Fourth Avenue, New York.

PLUMMER, CHARLES. British historian, died at Oxford, England, September 8. He was born at St. Leonards, Kent, on Jan. 24, 1851, and educated at Tenbury and Oxford. He was elected to a scholarship in Corpus Christi College, Oxford, in 1869, and after becoming a fellow he filled various offices. From 1875 to 1883 he was lecturer in modern history. From 1883 onwards he devoted himself wholly to the study of Anglo-Saxon and Celtic history and literature. He edited a revised text of Sir John Fortescue's *Governance of England* (1889); two of the *Saxon Chronicles* (1889); *Bede's History* (1896); *Lives of the Irish Saints* (1910). He was a member of many learned societies, among them the British Academy and the Royal Irish Academy.

PNEUMONIA. This acute infectious disease is of such severity that it is best treated in the hospital, so that the hospital statistics of the disease have great significance for the general public. All classes of the latter come to the hospitals, rich and poor, young and old, healthy and decrepit, and the virulence of the disease may show remarkable annual variations. Cases are admitted at any period of the disease from the first day to the last stage of the moribund patient. It is not surprising to note the range of mortality, which in the same hospital and under the same conditions of treatment may vary from 16 to 33 per cent. Ordinarily by pneumonia the lobar form is meant, for bronchopneumonia is rather a complication of other infections than a separate disease.

Mortality statistics show that the figures for young and old patients show the greatest differences. In a select body of young and robust individuals like military recruits, there may be no mortality and hardly any treatment is required. At the other extreme of life recovery

occurs only in a small minority of those attacked. Under the age of 40 the mortality should not ordinarily exceed 16, while in those over 40 it should be 45. Despite the great improvements in clinical medicine it is difficult to prove that our control of the disease is making much progress and it is also not easy to prove the contrary.

In the *Journal of the American Medical Association* for May 23, Kessel and Hyman of the Mt. Sinai Hospital, New York, publish an article entitled "Treatment of Lobar Pneumonia in Hospitals." Since November 1925 all pneumonia patients admitted have been placed in charge of a pneumonia commission and treated in accordance with a preconceived plan which comprises a "forced" diet of fluid and semifluid dishes, sponge bathing to keep down high temperatures, digitalis to sustain the heart, morphine for pain, restlessness and cough and a special serum. Despite the thoroughness of the treatment and the fact that the mortality may run as low as 16 per cent, the death rate during the season of 1926 was unusually high—about 33 per cent, which is a maximum. This may be explained in part by the usual factors of virulence of the pneumococcus—there were many patients with the deadly "Type III"; late admissions—all admitted with an average of four days of disease before admission succumbed; average high age, etc., etc. Of great interest is the fact that those patients with two lobes involved, including the double pneumonia cases, showed no higher mortality than did those with but a single lobe involved. In other words expressions like "massive" and "double" pneumonia should not carry a death warrant. The serum utilized had not yet shown itself successful.

POETRY. See LITERATURE, ENGLISH AND AMERICAN; FRENCH LITERATURE; GERMAN LITERATURE; SCANDINAVIAN LITERATURE; SPANISH LITERATURE, ETC.

POLAND. A European republic formed as a result of the War and comprising the territory formerly divided among the three governments, Austria-Hungary, Russia, and Prussia, from the three partitions of Poland in 1772, 1793, and 1795, which were confirmed by the Congress of Vienna in 1815. After the World War (1914-18), Poland, in addition to this original territory known as Congress Poland, acquired Prussian Poland, Polish Galicia, Upper Silesia, and a portion of the Vilna territory. Capital, Warsaw.

AREA AND POPULATION. The total area, according to recent estimates, is 149,958 square miles, and the population, according to the first official census of the Polish Republic in 1921, 27,176,717; estimated in 1926, 29,249,000. The largest cities with their populations at that census were: Warsaw, 936,713; Lodz, 451,974; Lvov, 219,388; Poznan, 184,756; Cracow, 183,706; and Wilno, 128,954. The Polish nationality represents two-thirds of the population and is followed in numerical order by the Ruthenians and Jews.

EDUCATION. Elementary instruction is compulsory and free and all other grades of education are free. According to the latest available statistics the elementary schools numbered 27,414, with 66,176 teachers and 3,237,340 pupils. Secondary schools numbered 778, with 14,631 teachers and 219,978 pupils. There were also 195 colleges for teachers with 1931 teachers and

34,437 pupils, and 850 technical schools with 110,000 pupils. The universities and institutions of university rank numbered 17 with 954 professors and 37,125 students.

PRODUCTION. The two principal occupations of the country are agriculture and stockraising, engaging about 65 per cent of the inhabitants. The following table from the *Statesman's Year Book* for 1927 shows the area in acres and the yield in metric tons of the chief crops in 1926:

Crops	Area (acres)	Yield (metric tons)
	1926	1926
Wheat	2,745,000	1,281,800
Rye	12,058,000	5,011,400
Barley	3,080,000	1,554,600
Oats	6,502,000	3,049,800
Potatoes	5,960,000	24,637,900
Sugar beets	461,000	3,724,900

Other important crops are hops, hemp, tobacco, and chicory. The last livestock census showed 3,201,166 horses, 7,894,586 cattle, 2,178,216 sheep, and 5,170,612 pigs.

There are eight industrial centres in Poland, Warsaw, Lodz, Cracow, Dabrowa, Katowice, Bialystock, Czestochowa, and Drohobycz. In the textile industry on Oct. 1, 1926, there were 2,161,992 spindles and 29,894 looms in the manufacture of cotton, and 447,367 spindles and 2073 looms in the manufacture of wool. Other important industries are paper manufactures of various kinds, chemicals, timber, iron, and naphtha. Seventy sugar refineries produced 490,000 tons of sugar in 1926-27.

The accompanying table shows the output in metric tons, of the more important mining and metallurgical industries:

POLISH MINING AND METALLURGICAL PRODUCTION
[Monthly average, in 1,000 metric tons]

Commodity	Jan.-June, 1927	July-Sept., 1927
	1927	1927
Coal	3,000	3,200
Potassium salts	24	30
Common salt	27.5	35
Iron ore	40	46
Pig iron	46	54
Steel	100	110
Rolled materials	70	81
Zinc	12	18

Polish production of 796,080 metric tons of crude petroleum in 1926 showed a slight decline from the 1925 output of 811,910 tons. This decline, however, was partly compensated by decreased waste, so that the net production in 1926 amounted to 754,220 tons, compared with only 745,000 in the preceding year. There was also a decline in stocks—from 102,160 tons at the beginning of 1926 to 48,150 at the end of the year. The number of producing wells increased from 1949 in 1925 to 1972 in 1926, but the average daily production per well decreased from 411 kilos to 400 kilos during the same period.

COMMERCE. Imports for 1927 amounted to 1,680,562,000 gold francs, and exports to 1,459,379,000 gold francs, according to figures supplied by the U. S. Department of Commerce. There was thus, for the year, an adverse balance of 221,173,000 gold francs, or \$24,815,000. This amount was approximately compensated by remittances from Polish emigrants to the United States, Canada, France and England, about \$25,000,000 annually. While no data are avail-

tions of the state taxation system. Some of these recommendations were effected before the close of the year and others were approved by the government pending the negotiation of a large foreign loan. The contract for this loan was concluded with an American banking group on October 12 and the bonds were offered in New York, London, and other European financial centres. Charles L. Dewey, former Assistant Secretary of the Treasury of the United States, was selected by the Polish government for the post of financial adviser, and Dr. E. Dana Durand, formerly connected with the United States Bureau of Foreign and Domestic Commerce and an expert on Polish affairs, was selected as his aide.

SITUATION IN THE SPRING. Despite the factors noted in the preceding YEAR BOOK which tended to weaken the position of Premier Pilsudski, he not only held his iron grip on the government but strengthened his position in many ways. It required only the slightest pretext to carry out wholesale arrest of his enemies. The best example of this was the arrest in the first month of the year of several members of the legislature and hundreds throughout the republic on charges of fomenting a plot to establish a White Russian Communist government in Poland. Although the government claimed to have seized vast quantities of arms and ammunition as well as documentary evidence to support its contention, nothing was publicly printed to show that there existed such a widespread plot as the government unearched.

The uncertainty of the Premier's position was clearly illustrated in the debate over the budget bill in February. On all sides it was freely predicted that the government's measure was to be overwhelmingly defeated by the Parliament. The bill as introduced was amended to such an extent that it was hardly recognizable. When the day for a vote came, however, Pilsudski appeared before the diet in his military uniform and accompanied by his cabinet. He entered the chamber (for the first time since his *coup*) at the psychological moment and the opposition vanished into thin air. Before the opposition could collect itself the budget bill was passed in its original form and the Premier had secured a tremendous personal triumph. On March 25, the dictator adjourned the diet, giving as his reason that it had been merely summoned to consider the budget and now that that was done there was no further need for its meeting.

A crisis with Russia was narrowly averted when the Soviet minister at Warsaw, Peter Voikov, was assassinated by a Russian emigré. Early in June the Russian government sent a note to Warsaw, which held the Polish government responsible for the assassination and declared that the Polish government had not taken necessary measures against the criminal activities in Polish territory of Russian counter-revolutionary terroristic organizations, which are particularly dangerous to the cause of peace in the present intense international situation. When the Polish government, thereupon, suggested that Soviet representatives should aid in an investigation of the Voikov murder, the Moscow government adopted a much milder tone and let it be known that a breach between the two countries was not desired. Of course at this

time Russia was in the throes of a diplomatic rupture with Great Britain and evidently did not wish to turn the spotlight of publicity from that affair to one nearer at home. See *RUSSIA, History*.

In reply to the Russian note, the Polish authorities offered to indemnify Voikov's family, although at the same time it pointed out that his assassin was a Russian citizen and not a Pole. The Polish Foreign office also stated that Voikov had repeatedly rejected offers of police protection. For a time this seemed to end the affair, but a few weeks later Moscow opened it up again by making further demands upon Poland and demanding that that country take strenuous steps to wipe out anti-Soviet organizations. It refused to accept indemnity for Voikov's family. In the meantime the Polish courts tried the assassin, who was a minor, and, while finding him guilty and sentencing him to life imprisonment, recommended to the Polish President that his sentence be reduced to 15 years. It was feared in many quarters that this light punishment would call for reprisals on the part of Russia.

Marshal Pilsudski, in answer to Russia's second note, had the following response delivered to Moscow: "In attempting to humiliate Poland without reason, you only incur the risk of humiliating yourself, since you have not sufficient force behind your threats, which you know as well as we do. We have done everything reasonable to give you satisfaction, and now we must courteously urge that you let the matter drop, because if regrettable incidents follow, you alone will be responsible."

SITUATION AT THE END OF THE YEAR. The difficult position of Dictator Pilsudski was well illustrated in the fall of the year when an extraordinary session of the diet was held in mid-September. As noted above Pilsudski had adjourned the diet after the passing of the budget law early in the spring. A provision of the Polish constitution, which said that the diet must be summoned whenever a petition signed by a certain number of members demanded it, was used by the opposition to compel Pilsudski to gather the legislating body in assembly. The Premier called upon another provision of the constitution to offset this menace to his régime. This provision stated that the diet could not begin work until it was formally permitted to do so by a decree of the President. He was willing to issue this decree only if the diet would limit its discussion to the third quarter of the budget. Although the leaders agreed to this proviso, it was not adhered to, and the opening session of the body was deluged with all kinds of measures, including one of no confidence in the existing government. Pilsudski met this situation with a decree on the second day of the diet's sitting which ordered it adjourned for 30 days.

The constitution, when referred to again, revealed that a session of the diet must be held before November 1 to consider the budget for the ensuing year. In accordance with this provision the diet was assembled on October 31. Before anything was accomplished, however, the diet was again adjourned on November 3 until November 28, when the terms of the deputies expired. According to parliamentary procedure this necessitated an election, but opinion was

almost unanimous in the belief that Pilsudski would not dare appeal to the people and would declare that no elections would be held. The constitution permitted him to promulgate the preceding budget until such time as a new diet was elected. After the term of the deputies expired more than 50 of the Opposition members were arrested, a device not resorted to before because of parliamentary immunity. The political issues at the close of the year were somewhat changed by the settlement of the dispute with Lithuania, a discussion of which will be found under LITHUANIA, History, and LEAGUE OF NATIONS.

POLAR RESEARCH. After the seeming neglect of polar exploration, renewed interest was being awakened by the organization of an international society for polar investigation, which had 180 members representing 19 nations.

At the meeting of the British Association for the Advancement of Science, Rudmose Brown, an expert, declared that certain polar problems demanded extended explorations for certain physical foundations for science. Among these are the unknown coast lines of Antarctica: delimitation of its glaciers; oceanographic life; oscillations of climate; fluctuations in extent and movement of arctic ice-fields; the distribution of land and ocean in unknown areas.

ARCTIC RESEARCH. The Soviet expedition of Obroutchev, for geological investigations, to the northern watershed of the Indigirka, Siberia, exposed current ignorance as to the region. Described for centuries as an arctic plain, with a few wandering hunters, it proved to be a region of high, extended mountain chains, with quite a population of Yakuts and Tunguses. Although details are lacking, there were found a number of communities of primitive people, whose life-methods show that in the distant past they had contact with Russians, whom they now know by tradition only. Another Soviet expedition was exploring, in cooperation with the University of Oslo, the unknown interior of Kola Peninsula, Arctic Lapland. In the adjacent Barents Sea, a German, Schultz, was surveying the fisheries.

The only adventurous Arctic expedition was that of Wilkins, who made an aviation flight into the unknown area northwest of Alaska.

His flight in 1926 of 150 miles over Beaufort Sea was a notable reconnaissance of the unknown regions, which impelled him to renew his efforts the following year. On March 29, 1927, Wilkins and Eielson left Point Barrow in an airplane, which carried, as was thought, enough fuel for a flight of 1400 miles in calm weather. They had flown 550 miles over the Arctic Ocean to the northwest, when engine trouble obliged a forced landing, which was successfully made without injury to the plane.

Wilkins improved the opportunity to make a sounding, which disclosed very deep water, over 4000 fathoms. There were no signs of land, and prospects of its near existence were improbable. After temporary repairs to the engine, they started homeward for Point Barrow but were forced to make another landing, which was done without danger.

On resuming their flight a blizzard struck them; after dark their gas failed and they struck rough ice which crippled the machine. They made sledges from the woodwork, and after

5 days found that they were 100 miles east of Barrow and 70 miles from shore. With indomitable energy they encountered disasters and sufferings, but eventually they reached an Eskimo camp at Beechey Point.

ANTARCTIC RESEARCH. Explorations for geographical discoveries had temporarily ceased in the Antarctic. The Argentine Geographical Institute, under governmental auspices, organized an expedition, which, establishing a land base on Graham Land, was to explore by aviation the coasts of Weddell Sea, but it had not yet started. An American expedition, under Byrd, was making arrangements to enter the field in late 1928, the antarctic summer.

Interest in the antarctic regions was principally commercial, in the exploitation of its oceanic resources. In this respect Great Britain had a practical monopoly, and began in 1925 a scientific study of conditions which might conserve whale and other fisheries. The *Discovery* returned to England after studying conditions in the southern seas; it was said that the experts had obtained valuable information bearing on this problem.

It is to be recalled that Great Britain, by letters patent, in 1908 declared Graham Land to be a British possession, extending "to the south of the 50th parallel of south latitude, and lying between the 20th and 80th degrees of west longitude." It forbade fishing in this region (the Falkland Dependency), except under license and from September to May. The whale fishery is conducted at five land stations at South Georgia, and five floating stations in South Shetlands. In 1924, 458,000 barrels of oil were exported.

To the west of Graham Land a French expedition, under Charcot, in 1927 began research studies on prospective fishing in those waters, presumably to assert French rights.

In 1923, under an Order in Council, the Ross Dependency of New Zealand was created. It includes all islands and territories lying to the south of 60 degrees of south latitude, and between 160° east longitude and 150° west longitude; that is, Ross Sea and the lands of Victoria and William.

POLITICAL AND SOCIAL SCIENCE, AMERICAN ACADEMY OF. A forum for the scientific discussion of social, civic, industrial and economic topics; founded in Philadelphia, Dec. 14, 1889, and incorporated Feb. 14, 1891. Meetings are held throughout the year at which subjects of national and international interest are discussed. The 31st Annual Meeting was held Apr. 22-23, 1927, and considered the general subject: "Some Outstanding Problems of American Foreign Policy." Other meetings conducted during the year discussed the following subjects: "Are the Filipinos Ready for Independence?" "An American Locarno," and "Philippine Independence from the Standpoint of Domestic and International Responsibilities." *The Annals* are published bi-monthly as the official organ of the Academy, each issue being devoted to a study of a particular topic of economic, political or social importance. In 1927 the following volumes were issued: "Federal versus State Jurisdiction in American Life"; a supplement, "Social and Economic Consequences of Buying on the Installment Plan"; "Modern Insurance Tendencies"; a supplement, "The Legal Minimum Wage in Massachusetts"; "Aviation": a supplement,

"Are the Filipinos Ready for Independence"; "Some Outstanding Problems of American Foreign Policy"; "Planning for City Traffic"; and "Europe in 1927." The officers in 1927 were: President, Dr. L. S. Rowe; Secretary, Dr. J. P. Lichtenberger; Treasurer, Charles J. Rhoads; and Vice Presidents, Dr. Ernest Minor Patterson, the Hon. Herbert C. Hoover, and Dr. Charles E. Merriam. The address of the Academy is 3622-24 Locust Street, West Philadelphia, Pa.

POLITICAL ECONOMY. Subjects in the field of economics are treated in this volume under the following heads: BANKS AND BANKING; BUSINESS REVIEW; FINANCIAL REVIEW; CHILD LABOR; COOPERATION; LABOR; LABOR ARBITRATION AND CONCILIATION; LABOR LEGISLATION; MATERNITY PROTECTION; MINIMUM WAGE; OLD-AGE PENSIONS; STRIKES AND LOCKOUTS; UNEMPLOYMENT; WOMEN IN INDUSTRY; WORKMEN'S COMPENSATION. See also such articles as CHILD WELFARE; LABOR, AMERICAN FEDERATION OF; SOCIALISM; TRADE-UNIONISM; WELFARE WORK.

See also the articles on AGRICULTURE, the various crops, etc. Further discussions are to be found in articles on the several industries, minerals, public utilities, etc., and in sections on economic conditions in the articles on the individual countries. Books on political science and economics, for the general reader, are noted in LITERATURE, ENGLISH AND AMERICAN, paragraph *Economics and Politics*.

POLITICAL SCIENCE, ACADEMY OF. An American institution for advancing the political sciences and promoting their application to public problems; founded in 1880 in New York City, and incorporated in 1910 under the membership corporation law of the State of New York. On Dec. 31, 1927, it had 6542 members, of whom nine were honorary members, 198 life members, and approximately 1100 subscribing members, chiefly libraries and organizations. All States in the Union, the District of Columbia, Porto Rico, Hawaii, the Philippine Islands, and leading foreign countries, are represented in both the individual and subscribing memberships. Two general meetings were held in 1927. The semi-annual meeting was held on April 8, at the Hotel Astor, New York, to discuss "Stabilizing Business." The general subject for discussion at the meeting was "Public Spending and Private Business." Three sessions were held dealing with (1) Planning of Business to Promote Stability; (2) Planning of Governmental Organization and Expenditures to Promote Stability; and (3) The Effect of Governmental Expenditures on Business. The papers and addresses, with some additional material and a prefatory note giving some account of the meeting and information concerning the speakers, were published in *The Proceedings*, vol. xii, No. 3, under the title, "Stabilizing Business," July, 1927.

The annual meeting, held November 18th, was devoted to the subject, "America as a Creditor Nation." Three sessions were held as follows: (1) Foreign Investment Problems; (2) International Trade Relations; (3) International Finance and World Trade. The papers and addresses prepared for the meeting were published in *The Proceedings*, vol. xii, No. 4, published January, 1928, together with some account of the meeting. Four issues of the *Political Science Quarterly*, the official organ of the Academy, were published during the year.

The officers for the year were: Samuel McCune Lindsay, president; Albert Shaw and Paul M. Warburg, vice presidents; Parker T. Moon, secretary and editor of the publications; George A. Plimpton, treasurer; and Ethel Warner, executive secretary and assistant treasurer. The headquarters are in Fayerweather Hall, Columbia University, New York City.

POLITICS, INSTITUTE OF. Formed for the discussion of foreign affairs, so as to promote a more sympathetic understanding of the problems and policies of other nations, these annual sessions were inaugurated by the trustees of Williams College in September, 1919. The first session of the Institute was held at Williamstown, Mass., in the summer of 1921. Membership is open to men and women on the faculties of colleges and universities, to writers on foreign politics, to persons engaged in the direction of foreign commerce or banking, to diplomatic and consular officials, to officers of the army and navy, to editors, foreign correspondents of the press, and by invitation, to others who have had training and experience in international law and politics. In 1924 the General Education Board and the Carnegie Corporation joined with Bernard M. Baruch, who had made the first three meetings possible, in financing the movement for a five-year period.

The seventh session of the Institute met at Williamstown, July 28-Aug. 25, 1927. Addresses were delivered by visitors of international reputation, including Dr. Jacob Lange, the Danish authority on agriculture, Dr. Robert Michels, Professor of Political Economy at the University of Basel, Switzerland, Bishop Nikolai of Ochrida, Serbia, and Moises Saenz, Mexican Under-Secretary of Education. Lecture courses were conducted by Dr. Peter Reinhold, formerly Finance Minister in the Luther Cabinet in the German Reich, whose subject was "Financial and Economic Policy of Germany Since the War"; Count Carlo Sforza, member of the Italian Senate, "Diplomatic Europe Since the Treaty of Versailles"; Sir Arthur Willert, head of the news department of the British Foreign Office, "The British Foreign Policy Since the War."

The following is a list of the Round-Table subjects with their respective leaders: International Debts in Retrospect and Prospect, Dr. Joseph S. Davis, of the Food Research Institute, Stanford University; The Philippine Islands: Their Political Status, Professor Ralston Hayden of the University of Michigan; Present Problems of the British Commonwealth of Nations Since the War, Professor Herbert Heaton, Queens University; Main Contrasts between the Anglo-Saxon and Continental Systems of Law, Dr. Pierre LePauille, Paris, France; The Chinese Situation, Professor Harold S. Quigley of the University of Minnesota; Foreign Interests and National Self-Determination in Latin America, Prof. William R. Shepherd of Columbia University; Dictatorship versus Democracy in Europe, Prof. Harold R. Spencer, Ohio State University; An American Agricultural Policy, Mr. Henry A. Wallace of Des Moines, Iowa.

There were 264 members in attendance at the 1927 meeting, representing 13 countries, of which Japan headed the list with 8 representatives; 25 States of the United States were represented. The Institute publishes an annual report of the main ideas developed at the conferences, copies

of which may be obtained through the secretary. The officers of administration in 1927 were: Harry Augustus Garfield, chairman; Walter Wallace McLaren, executive secretary; and Willard Evans Hoyt, treasurer. Headquarters are at 1 Hopkins Hall, Williamstown, Mass.

POLO. There was a decided international flavor to polo in 1927 due to the comparatively long visit made to the United States by a British team composed of a group of army officers from the Army-in-India. The training of the British for the Hurlingham Trophy matches suffered from the continuous rainy weather and in the first contest the United States four—J. M. Watson Webb, Thomas Hitchcock, Jr., Malcolm Stevenson and Devereux Milburn—triumphed by the one-sided score of 13 to 3. The composition of the British team in this match was: Captain Claude E. Pert, Major Austin H. Williams, Captain C. T. I. Roark and Major Eric G. Atkinson. As a result of the poor showing made in the opening match the British made radical changes in their line-up for the second clash in which they went down to defeat by a score of 8 to 6, but only after a magnificent battle. The British four in this contest comprised Captain Richard George, Captain John P. Denning, Captain C. T. I. Roark and Major Eric G. Atkinson.

The United States junior championship was won by the United States army team for the second consecutive year, but this same four was forced to bow in the United States open tourney to the beautifully mounted Sands Point combination consisting of W. Averell Harriman, Thomas Hitchcock, Jr., F. Cowdin and Louis E. Stoddard.

The Anglo-American Eastcott team, comprising the two Earl Hoppings, father and son, John A. E. Traill, famous Argentine back, and A. C. Schwartz, captured the Monte Waterbury Cup. Yale University triumphed in both the indoor and outdoor college tourneys.

POMPEII. See **ARCHAEOLOGY.**

PORK. See **LIVESTOCK.**

PORTLAND CEMENT. See **CEMENT.**

PORTO RICO, pōr'tō rēkō. An island possession of the United States in the West Indies; the most easterly and the smallest but most densely populated of the Greater Antilles; lying 490 miles east of Cuba, 1380 miles southeast of New York. Capital, San Juan.

AREA AND POPULATION. The area of the island is 3435 square miles and the population, according to the census of 1920, 1,299,800. Although the Governor's report for 1927 did not give an estimate of the population for that year, the estimate for 1926 placed it at 1,417,000, of which 388,756, or 27.4 per cent, was urban and 1,028,244, or 72.6 per cent, was rural; 1,088,668, or 76.8 per cent, was white, and 328,978, or 23.2 per cent, was colored. The movement of population in 1927 was: Births, 58,390; deaths, 33,562; marriages, 9808. The capital, San Juan, had a population of 70,707 in 1920. Other important towns are Ponce (41,561) and Mayaguez (19,069).

EDUCATION. Primary education is free and compulsory between the ages of eight and 14. According to the governor's annual report for the fiscal year 1927, there were employed in that year 4483 teachers. The total enrollment in all the public schools was 213,321. Of this number, 1371 were enrolled in needlework classes; 122,

354 in the rural schools; 82,399 in the elementary urban schools; 7055 in the secondary urban schools; and 142 in the industrial school in San Juan. In addition to the persons enrolled in public schools, 6489 attended private schools. The average number enrolled was 191,153, and the average daily attendance was 182,927. The legal school year consists of 10 months of 20 days each. There are 2184 different buildings used for schools, with 4454 school rooms. During the year, 29 new school sites were acquired; 86 new school buildings were completed; and new equipment was purchased at a cost of \$47,861. The total capital outlay for the year was \$506,790. The total expenditure for current expenses for the year was \$1,205,000. In addition the municipalities disbursed \$1,622,000 from their own school funds. Seventeen high schools were maintained during the year with 369 teachers and 7055 pupils. The enrollment in all the departments of the University of Porto Rico during 1926-27 was 2850 and the faculty numbered 151.

PRODUCTION. Agriculture is the principal industry on the island and the chief crops are sugar, tobacco, coffee, and fruits. In general, the sugar situation showed a marked improvement for the year. The crop produced amounted to 629,129 tons, as compared with 603,187 tons produced the preceding year. The value of the sugar exported also increased from \$48,201,000 to \$54,347,000. Sugar reached the lowest price in 1926 since 1914, averaging 4.17 cents per pound. In 1927 the average price increased to 4.75 cents per pound. Estimates of the 1927-28 sugar crop made at the end of the year placed the production at 668,235 short tons. The normal tobacco crop of Porto Rico has been about 25,000,000 pounds. The high prices received in 1925 and 1926 stimulated the growers to excessive activity in preparing for the tobacco crop of 1927.

Little attention was given to market conditions, to facilities for curing and warehousing, or to the advice of experts. The growers were warned that under no circumstances should the total amount placed on the market exceed 30,000,000 pounds. The normal area planted had been about 45,000 acres. Instead, 85,000 acres were planted. The tobacco barns were but slightly increased in capacity. The season was wet and laborers could not be obtained to harvest properly and care for the crop. The quality was consequently below the average, and the amount produced more than doubled the advised market requirements. As a consequence the price paid was about 22 cents as compared with 30 cents in 1925 and 39 cents in 1926. More persons are engaged in the production of coffee than of any other product. In 1925-26 the coffee crop totaled 26,330,000 pounds, valued at \$7,082,000. The year 1926-27 was expected to show an increase over these totals but a severe tropical storm in July, 1926, destroyed about 40 per cent of the crop, with the consequent result that production amounted to 18,961,000 pounds valued at \$5,626,000. The exportation of fresh fruits suffered a decline during the year, but the exportation of canned fruits materially increased.

COMMERCE. The growth of trade between Porto Rico and the United States and with foreign countries is shown in the following table:

GROWTH OF EXPORT AND IMPORT TRADE OF PORTO RICO

	1900	1925	1926	1927
Brought from the United States	\$6,952,114	\$79,349,618	\$83,046,553	\$87,046,819
Shipped to the United States	3,350,577	84,411,792	88,106,570	100,574,001
Brought from foreign countries	3,037,391	11,154,988	12,311,711	11,764,431
Shipped to foreign countries	3,261,922	10,407,132	10,618,281	7,493,433
Total	16,602,004	185,323,545	193,983,115	206,878,184

The table shows the steady growth of the commerce of Porto Rico. The total external trade in 1900, two years after the American occupation, was only in round numbers \$16,000,000. In 1927 it was \$206,000,000. The increase was being maintained from year to year. The increase from 1925 to 1926 was \$8,659,570; and from 1926 to 1927 it was nearly \$13,000,000.

The increase of the shipments to the United States was from \$3,000,000 to \$100,000,000; and the increase of purchases from the United States was from \$6,000,000 to \$87,000,000. The balance of trade with the United States is over \$13,000,000 in favor of Porto Rico. Ninety per cent of all the trade of Porto Rico is with the

United States. The four principal products exported from the island are sugar, tobacco, coffee, and fruits. The total number of vessels which entered and cleared the ports of Porto Rico during the year was 2922.

FINANCE. The accompanying table from the annual report of the Chief of the Bureau of Insular Affairs gives the status of the budget for the last two years.

The total bonded indebtedness on June 30, 1927, amounted to \$23,023,000.

LEGISLATION. The regular session of the legislature met on February 14 and lasted until April 15. Forty-five laws and 46 joint resolutions were approved by the governor during this session. There was a special session April 25-May 8.

OFFICERS. The members of the government at the end of the year were: Governor, Horace M. Towner; Attorney-General, Dr. George C. Butte; Treasurer, Juan G. Gallardo; Commissioner of the Interior, Guillermo Esteves; Education, Juan B. Huyke; Agriculture and Labor, Carlos E. Chardon; Health, Dr. Pedro N. Ortiz; Auditor, Frederick G. Holcomb; Executive Secretary, Eduardo J. Saldana.

PORTS AND HARBORS. In the United States during 1927 a number of important terminal developments were under way by railways, and municipal and state authorities. At Jersey City and Norfolk, on the Atlantic Coast, there were costly freight piers and wharves under construction, while on the Gulf of Mexico the ports of Mobile, Alabama, and Houston and Corpus Christi, Texas, were being made available for extensive commerce. On the Great Lakes new ore and coal shipping docks, for increased storage capacity and increased rapidity of loading, were under construction.

ALABAMA STATE DOCKS. The terminal at Mobile, to which reference was made in the YEAR BOOK for 1926, made rapid progress in 1927, and Pier No. 1, composed of concrete and steel, was completed and in use. This pier included 2400 feet of apron wharf, 300,000 square feet of storage and 207,000 square feet of cotton warehouse. Pier No. 2, 1600 feet in length and 500 feet wide, carrying a concrete and steel warehouse, for ships loading and discharging alongside, was about finished at the end of the year, and its completion was looked for in 1928.

Between these two piers a slip 1600 feet by 350 feet had been completed. Pier No. 3 was under construction and about two-thirds of concrete apron wharf on one side had been built at the end of the year.

HOUSTON, TEXAS. During 1927 important public and private developments were under way at this port, located 50 miles inland from the Gulf, but reached by a ship channel which affords a 30-foot depth of water. The River and Harbor Act of 1927 provided for a survey to give 32 feet of water over a width of 250 feet for the 25 miles to Galveston Bay, and 500 feet through the bay to the open sea. Through an extension

COMPARATIVE STATEMENT OF RECEIPTS AND DISBURSEMENTS OF PORTO RICO, FISCAL YEARS 1926 AND 1927

	Fiscal year ending June 30— 1926	1927
Balance from prior years	\$22,660.37	\$414,751.57
Revenues:

* Includes earthquake mortgage loans and loans to municipalities and school boards.

of the channel for $6\frac{1}{2}$ miles, access to the centre of the city was provided for barges and light-draft vessels, and for 2 miles of this distance a 30-foot channel, 150 feet in width, was to be constructed while the remainder was to be 10 feet deep and 60 feet wide. Several large wharves were under construction during the year, one of which was an extension of the 480-foot wharf served by a 1,000,000-bushel grain elevator which was built in 1927. Still another wharf, 460 feet in length, was under construction, while the port facilities were being increased by about 10 miles of track added to the lines and yards of the Public Belt Railway.

CORPUS CHRISTI, TEXAS. During the year there was considerable activity at the new port of Corpus Christi, Texas, formally opened in September, 1926. This port was established by the city of Corpus Christi on the land-locked harbor of Corpus Christi Bay, which, with an area of about 140 square miles, is reached from the open water of the Gulf of Mexico by the Aransas Pass, a natural channel about 200 feet wide, some $21\frac{1}{2}$ miles from Corpus Christi. As the depth of the Bay ranges from but 8 to 14 feet, a ship channel from Aransas Pass to the city was authorized by Congress, and this work was undertaken under an agreement with the city, which was required to provide a turning basin 1000 by 3000 feet and 25 feet deep, with an entrance channel 200 feet bottom width, connecting with the Federal government's ship channel. The city was also required to provide an extension of the breakwater, a levee between the harbor and Nueces Bay, and wharves for shipping, in addition to a drawbridge across the entrance channel. The work was of considerable importance, involving not only an extensive commercial port, but various forms of shore protection to prevent damage by tropical storms such as occurred in 1919.

CANADA. During the year, with the deepening of the channel of the River St. Lawrence, wharves were under construction with a depth of 40 feet of water alongside. One of these, located at Wolfe's Cove, was to be 2843 feet in length. The dredging of the river was being carried on with the intention of providing a channel 35 feet deep from Montreal to the sea at all states of the tide, and a large part of the estimated work had been completed at the end of the year. A new north channel near the Ile d'Orleans below Quebec had been marked and buoyed and after June was available at extreme low water for ships drawing $25\frac{1}{2}$ feet.

At Vancouver the growth of the port and its improvement continued to afford facilities for the increasing export and import trade. At this port the grain elevator capacity was increased over 6,500,000 bushels and storage for another million bushels was nearing completion at the end of the year. In North Vancouver increased facilities for the shipment and bunkering of coal were being provided. The pier for the Canadian Pacific Railway, built of reinforced concrete, was finished with a viaduct 1000 feet in length connecting the pier with the shore. This new pier used piles instead of cylinders, as was the practice in the Ballantyne pier of this company.

GREAT BRITAIN. On July 19 the Gladstone Dock project at Liverpool was formally opened by King George after having been under construction for a number of years, and in Decem-

ber, the graving dock was thrown open to shipping. The Mersey Dock and Harbor Board in 1910 began work on a large new wet dock with a total water area of about $58\frac{1}{2}$ acres. This included the Gladstone Dry Dock, which could be used also as a wet dock. This dry dock, completed in 1913, was originally entered direct from the river but when the construction of the new wet dock was in progress it was decided to include the dry dock within the former, and in March, 1921, the old dock was taken out of commission. The project involved, also, a new river entrance lock which was the largest in Great Britain, with dimensions exceeded only by those of the Kiel Canal locks and the new entrance lock in the Amsterdam Canal at Ymuiden, still under construction. There was also a new communication lock between the Gladstone Dock and the Hornby Dock, so that vessels proceeding to and from the older docks can use the new entrance when required. The Gladstone Docks have a quayage extending about 3 miles, with 3-story warehouses equipped with roof cranes. The total cost of the new works put in operation during the year was estimated at approximately \$40,000,000.

At the port of London substantial progress was being made on the Tilbury entrance lock and dock extension which was begun by the Port of London Authority in July, 1926. During 1927 the improvement of the West India and Millwall Docks was put under construction. This involved the construction of a new entrance lock at the West India Dock, 590 feet long and 80 feet wide. There was also in progress the cutting of passages for the West India export and import docks, which hitherto had been separate, and the Millwall Docks. In the financial year ended Mar. 31, 1927, the Port of London made a record for total tonnage of vessels arriving and departing both with cargo and in ballast, 49,995,000 tons being entered and cleared from the port, as compared with 47,505,000 tons during the previous year. This was in view of a decrease for the United Kingdom as a whole of over 31,500,000 tons.

FRANCE. The Rove Tunnel connecting the port of Marseilles with Etang de Berre, with its waterway, was formally inaugurated in April, and not only adds a link in the inland waterway system of France, but opened up the large deep water lake for development by Marseilles as an annex to the port. During the year, plans were being developed for the extension of the port and harbor so as practically to double its capacity.

At Cherbourg a deep-water quay and maritime station had been planned, to cost over one million dollars, to accommodate the Atlantic traffic so as to provide for ships drawing 36 feet, at all states of the tide. At Boulogne the Ministry of Public Works was considering the construction of another breakwater on the north side of the harbor about two kilometers in length and the extension of the Carnot breakwater to form an enclosed outer harbor which would be dredged to a depth of about 43 feet at low water.

BRUXELLES. At the port of Antwerp important developments were proposed, involving a large inland waterway scheme which would enable barges of 1350 tons to navigate between Antwerp and Liège and connect Antwerp with the canalized Meuse. On December 20, the new Kruisschans Lock at Antwerp and the basin

canal to which it gave access were brought into use. This lock is 833 feet by 114 feet, inside dimensions, with a depth of 33 feet over the sills at low water, and about 46 feet at high water.

SPAIN. Extensive improvements were contemplated at Barcelona and at the port of Seville. At the latter the expenditure of five millions of dollars for river diversion and rectification was under consideration.

ITALY. At Naples and Genoa, as well as at Palermo and Bari, new breakwaters were under construction with cyclopean blocks. At Genoa, the substantial enlargement of the port was in progress and additional large docks and warehouses were being built as part of an extensive programme. Better railway service was being planned and it was decided that on Jan. 1, 1928, the whole port of Genoa would become a "free" port, instead of a small area previously designated for this use. This, of course, did not mean that the city of Genoa would be "free." In 1926, Genoa entered and cleared 10,243 ships of 17,928,618 tons, as against 13,698 ships for Marseilles with 23,392,247 tons, but greater tonnage of goods was discharged and loaded at Genoa.

HOLLAND. In connection with the construction of the great sea dike between the mainland of North Holland and the Island of Wieringen, the first section of which was completed in 1926, work was in progress on the main section of this dike, extending from Wieringen to the Frisian coast, about 18½ miles away. The areas near each end of the dike, where the navigation locks and sluices were to be built, were being enclosed, preliminary to the actual operation, and the northwest polder, lying between the Island of Wieringen and Medemblik, was being enclosed during the year.

SOUTH AMERICA. In Chile the seaward extension of the Valparaiso breakwater was in progress, involving construction in depths as much as 180 feet in places. This new extension was formed of a sand and rubble mound brought up to about 40 feet above mean sea level, with a superstructure formed of concrete blocks on the sloping system. At Antofagasta quays and jetties were being built under the shelter of the first breakwater, which was completed and formally accepted January 15 at a cost of about \$8,200,000 and the construction of a second section and the deepening of the harbor area were in progress. Other new construction determined on by the Government of Chile was the construction of an adequate port at Valdivia to cost some \$5,000,000. In Santos, Brazil, new quays were being built and facilities for oil imports, while harbor extensions were being completed at Callao, Peru, at La Guayra, and at Ilheus on the southern coast of Bahia, Brazil. At Bahia Blanca, Argentina, a large reinforced concrete elevator, 80,000 tons capacity, with the necessary loading and handling appliances, was under construction which would afford facilities for loading grain to ships at a maximum rate of 6000 tons per hour.

AFRICA. At Walffish Bay in Southwest Africa, the new port works which had been under construction for three years at a cost of about \$3,500,000 were opened in August. These involved a deep water wharf, 1500 feet in length. At Beira the new lighter wharves had been nearly completed and the deep-water wharf and the dredging work were well under way. Additional

port improvements were under construction at Kilindini, Mombasa. The breakwaters were under construction at Table Bay and Port Elizabeth, while the Cape Town coaling jetty was under construction and five additional berths for large ships were being built on the south arm of the Victoria Basin. At Durban the grain elevator with a storage capacity of 42,000 tons, or 12,000 tons more than the only other South African port elevator, at Cape Town, was completed and put in use in October. In West Africa the breakwater and harbor works at Takoradi were put in use and were to be formally opened in March, 1928. They involved a breakwater of the rubble mound type, about 1½ miles in length. In North Africa the Grand Mole at the port of Casablanca, Morocco, along with the Mustapha jetty, was being extended and at Algiers the Mustapha breakwater was put under construction in 1927.

JAPAN. At Osaka, Japan, during the year an extensive project of reclamation and harbor improvement was determined on, the entire improvement, extending over some four years, at an estimated cost of \$2,500,000. In addition to the ground reclaimed and the deepening of the harbor, a reinforced concrete pier, 200 feet long and 33 feet wide, was an important element of the project.

During the year there was built on the Tyne the 50,000-ton floating dock for the new Naval Base at Singapore. The last of the seven sections was launched on December 10.

At Calcutta the King George Docks, put under construction in 1920, were reaching completion, while at Madras a reinforced concrete jetty was also nearing completion. This structure was carried on piles 25 inches square, some of which were over 75 feet in length, and would provide berths alongside with 33 feet at low water.

PORTUGAL. A republic of Europe, situated west of Spain in the Iberian peninsula, the westernmost of all the states of Europe. Capital, Lisbon.

AREA AND POPULATION. The area of continental Portugal is 34,254 square miles; population, according to the census of 1920, 5,621,977, as compared with 5,545,595 in 1911. The Azores, with an area of 922 square miles, had a population of 242,613 in 1920; and Madeira, with an area of 314 square miles, a population of 169,777 in 1920; the total area, therefore, may be considered 35,490 square miles and the population in 1920 may be placed at 6,032,991, because the Azores and Madeira are considered integral parts of the republic. The Portuguese colonial possessions in Africa and Asia had an estimated area of 936,264 square miles, with a population of 8,737,853, of which 927,292 square miles, with a population of 7,736,700, were in Africa. Lisbon, the capital, had a population in 1920 of 486,372, and Oporto, the next largest city, 203,091. No later educational statistics are available than those for 1919, when the public elementary schools numbered 7007, with 170,415 pupils. According to the 1920 census, the illiterates numbered 1,338,419 men and 2,438,992 women.

PRODUCTION. Cereal crops are the mainstay of agriculture in Portugal, yet production of wheat, rice, and corn is so insufficient for local needs as to necessitate annual imports of considerable amounts. A number of other products, however, are produced in sufficient quanti-

ties for exportation, among them dried grapes, almonds, fresh grapes, and olive oil. The most profitable agricultural product of the country is wine, especially port. As this is to some extent a luxury product, the prosperity of the industry is dependent in considerable degree on the general situation in export markets. Cork and cork products form one of the leading exports, and there is a demand for all that the country is able to supply. The principal market is the United States.

Inaccessibility has impeded mineral as well as agricultural development. Although all eight of the Portuguese Provinces are known to contain mineral deposits of greater or less importance, the actual output of the country is almost negligible. Coal, tin, tungsten, copper, pyrites, radium, arsenical pyrites, lead, zinc, and manganese are among the minerals known to exist, but the extent of their deposits is unknown and production is light. Textile products are the only Portuguese manufactures of more than local importance, and their export market is confined mainly to the colonies.

COMMERCE. Imports far exceed exports in the foreign trade of Portugal. Figures for 1925, the latest available, show imports valued at 2,561,000,000 escudos (\$129,000,000) and exports at 1,158,000,000 escudos (\$58,000,000). The adverse balance is thus considerably greater than the export total, though even these figures represent an improvement over previous years. The principal offsets to this deficiency in exports are the earnings of the intermediary trade between the Portuguese colonies and foreign countries, the earnings of Portuguese companies and individuals in the colonies, and the remittances from Portuguese emigrants abroad. Exchange difficulties after the War were caused in part by the low export level, and this continued to be one of the barriers to economic recovery and progress. Imports of manufactured goods are high, as might be anticipated, but the value of foodstuff imports is only slightly lower, which is rather striking in view of the primarily agricultural character of the country; raw materials reach approximately the same value as each of the other two classes. Exports to Portugal from the United States in 1926 amounted to \$10,672,262 and exports, from Portugal to the United States in the same year were \$4,564,825.

FINANCE. According to *Commerce Reports*, the Portuguese budget for the fiscal year 1927-28 placed estimated revenues at 1,459,377,587 escudos as compared with 1,289,032,232 escudos for 1926-27, and expenditures at 1,484,045,029 escudos as compared with 1,155,304,830 escudos for the preceding year. The deficit of 266,272,597 escudos in the 1926-27 budget increased to an estimated 388,667,442 escudos. This deficit will probably be met by issues of treasury notes and by an increase in the note issue of the Bank of Portugal, to enable it to grant the government another substantial overdraft. On July 1, 1926, the total external debt of the republic amounted to £33,025,494 and the internal debt to 4,330,020,295 escudos.

COMMUNICATIONS. In 1925, 2109 vessels of 5,189,521 tons entered the port of Lisbon and 1249 of 1,997,026 tons entered the port of Oporto.

In a study of railway operations in Portugal in 1926, published by the U. S. Bureau of Foreign and Domestic Commerce in September, 1927, it was stated that the most important railway

in the country was the Companhia dos Caminhos de Ferro Portuguezes. The length of this railway at the close of 1926 was 1146 kilometers; operating revenues amounted to 201,687,406 paper escudos; freight transported during the year totaled 2,242,528 tons and passengers transported numbered 11,727,988. The rolling stock in operation at the end of the year consisted of 212 locomotives, 3335 freight cars, and 555 passenger cars. The general condition of the equipment was reported as being good. This company during June, 1926, took over the government-owned railways, the second system in importance in the country. This transaction made the company practically the sole owner of the railways of continental Portugal. The government-owned railways operated 502 kilometers of line, and the rolling stock consisted of 93 locomotives, 1320 freight cars and 234 passenger cars. The material of these lines had improved considerably of late years, owing to a good supply of rolling stock supplied by Germany under the reparations plan.

GOVERNMENT. According to the constitution of 1911, executive power is vested in the president, elected by the parliament for four years but ineligible to reelection, who acts through a responsible ministry; and legislative power in a parliament of two chambers, the upper house having 71 members elected by the municipal councils and the lower house 164 members elected for three years by direct suffrage. Acting President at the beginning of the year, General Antonio Oscar de Fragozo Carmona (appointed in December, 1926). The cabinet was formed as follows: Prime Minister, General Carmona; Interior, Adriano da Costa Macedo; Foreign Affairs, Antonio Maria de Bettencourt Rodrigues; Finance, General de Coides; Justice, Manuel Rodrigues, Jr.; War, Abilio A. V. de Passos e Sousa; Marine, Jayme Afreixo; Colonies, Joao Bello; Instruction, Alfredo de Magalhães; Commerce and Communications, Julio Cesar de Carvalho Teixeira; Agriculture, F. A. Pedrosa.

HISTORY. As noted in the preceding *YEAR BOOK*, General Carmona practically established himself as a dictator in Portugal before the close of 1926. Shortly after the opening of 1927, his position as a dictator was put to a severe test. The party in opposition to General Carmona issued a manifesto to the foreign legations stating that when they came into power they would not recognize any foreign loans contracted by General Carmona's government. The government took prompt action which resulted in another revolution, the twenty-third since Portugal became a republic in 1910. Those members of the opposition parties who signed the manifesto and served in the Portuguese army were stripped of rank; some exiled.

On February 3, the action of the government was met by a revolutionary movement under the leadership of Gen. Souza Diaz. A state of siege was immediately declared and troops sent to Lisbon and Oporto, where the fighting was heaviest. The affair was extremely violent and bloody during the week it lasted, estimates of the dead being placed as high as 1000. General Carmona reported February 10, that the movement had been crushed. He took drastic measures, such as the abolition of the right to strike and the suspension of opposition newspapers, to prevent the recurrence of the affair. He stated

at the time that these measures were temporary and would be rescinded as soon as conditions warranted them.

While outwardly the country remained calm there were unmistakable evidences of inward seethings. In the middle of August a military group invaded the home of General Carmona, while he was holding a cabinet meeting, and demanded that the government resign. Upon the cabinet's refusal to do so the military officers fired upon the cabinet members and a catastrophe was narrowly averted by the personal courage of the dictator. The leaders in this abortive uprising were jailed and later exiled to the Cape Verde Islands. The year closed with President Carmona still in power. It was reported toward the close of the year that the government was planning to request the League of Nations to establish a financial control over the country similar to that exercised in Austria and Hungary.

PORTUGUESE EAST AFRICA, or **MOZAMBIQUE**. A colony of Portugal, extending along the coast of Africa from 10° 40' S. latitude to the boundary of the Union of South Africa; bounded on the west by the Union of South Africa and Rhodesia, and on the north by Tanganyika. Area, 428,132 square miles. The estimated population comprises about 3,000,000 natives; 10,500 whites; and 1100 Asiatics and half-castes. There are three clearly defined divisions of the colony: (1) the Province of Mozambique, 295,000 square miles; (2) the territory under the Mozambique Company, 59,840 square miles; (3) the district under the Nyasa Company, 73,292 square miles. In addition, there is the "Kionga Triangle," formerly belonging to German East Africa, situated south of Rovuma, which was allotted to Portugal by the Treaty of Versailles. Lourenço Marques, the capital and chief port for foreign trade, had a population, according to the latest available statistics, of 9849, of whom 4691 were Europeans. Other ports are Mozambique, with a population of about 361,839 (472 Europeans): Ibo, Chinde, Beira, Quilimane, and Inhambane. The chief products are beeswax, coconuts, sugar, and mineral products. Rubber and ivory are exported. Imports in 1925, exclusive of gold and silver, amounted to \$13,484,000 and exports to \$7,270,000, leaving a negative balance of \$6,214,000. Corresponding figures for 1924 were \$9,859,000 for imports and \$6,446,000 for exports, with a negative balance of \$3,413,000. The proposed provincial budget of Portuguese East Africa for the fiscal year 1927-28 balanced at 399,701,814 escudos (\$19,985,090). The port and railway administrative council at Lourenço Marques took out of the hands of private companies the work of landing and loading at the port, and put the contract for such work up for tender as from Aug. 1, 1927. The five landing and shipping firms were very much upset about the proposed change.

PORTUGUESE GUINEA. gî'nê. A colony of Portugal on the west coast of Africa, entirely surrounded on the land side by French territory. It includes the archipelago of Bijagoz, together with the island of Bolama on which is situated the capital, Bolama. Area, estimated at 13,946 square miles; population, variously estimated from 300,000 to 800,000. The principal port is Bissau. The chief products are wax, rubber, ivory, hides, and oil seeds. The imports in 1924 were valued at \$1,570,808 escudos; exports at

49,192,929 escudos. The estimated public revenue for 1926-27 was 19,966,900 escudos and the expenditure, 19,685,239 escudos.

PORTUGUESE WEST AFRICA. See **ANGOLA**.

POST OFFICE. See **UNITED STATES**.

POTASH. In 1927, 95 per cent of the world's requirements for potash, used principally as a fertilizer, were supplied from German and Alsatian deposits. It was estimated that Germany produced over 1,200,000 tons and consumed 700,000 tons; Alsace produced 380,000 tons; the United States, 28,000 tons; Poland, 15,000 tons; and Spain, 25,000 tons. At the present rate of consumption Germany, with over 200 mines of which 43 were in operation and 22 in immediate reserve, was believed to have enough potash to supply the world for over 2000 years. During 1927 examination of three new territories as a source of supply was in progress. The Dead Sea in Arabia was being prospected by a group of English capitalists, while in Russia the potash deposits in the Ural Mountains were under consideration, and the potash deposits in western Texas and eastern New Mexico were being explored and exploited. In Europe and Japan the consumption of potash had increased by over 45 per cent since 1913, but in the United States the consumption had increased but 6 per cent. Local producers in the United States supplied about 10 per cent of the domestic requirements, the largest factor being at Trona Lake, Cal.; while the second largest producer was at Baltimore, where 3500 tons of K_2O was produced from distilling waste. The U. S. Bureau of Mines reported for 1926 that 7 plants produced 46,324 short tons of crude potash, with an available content of K_2O of 23,366 tons. The sales from these plants was stated at 51,369 tons of crude potash with available content of K_2O of 25,060, with a value at the plant of \$1,083,064. In 1926 potash salts for use in the American fertilizer industry were imported to the amount of 859,422 short tons with a K_2O content of 245,700 tons, valued at \$13,635,154. For use mainly in the chemical industries, potash salts to the amount of 47,941 tons, with a K_2O content of 20,580 tons and a value of \$4,796,711, were imported during the year, making a total value of potash materials imported of \$18,431,865. See **FERTILIZERS**.

With reference to the studies undertaken by the government (referred to in the **YEAR BOOK** for 1926, p. 157) under the \$100,000 appropriation from Congress to investigate domestic potash-bearing lands with a view to making the country less dependent on foreign potash, the U. S. Department of the Interior reported that the first core drilling operation took place on public land in Eddy County, New Mexico. About 50 beds or groups of beds containing 2 per cent or more of potash were found between depths of 838 to 1770 feet. The hole was 1847 feet. Fourteen beds ranged in thickness from 1 in. to 6 feet, 2 inches and in potash content from 3.10 to 16.47 per cent. Polyhalite was the most abundant potash-bearing mineral found in the cores, occurring in 11 of the 14 beds. Carnallite, one of the principal potash-bearing minerals in the German fields, was encountered in three of the beds, marking the first time this mineral had been noted in samples from the Texas-New Mexico field. Its occurrence in New Mexico in definite beds, even though the thickness shown

in the core was only 8 inches, leads to the hope that, as exploration progresses, beds of minable thickness will be found. Further examination of cuttings from wells drilled for oil in potential potash territory in the Southwest has shown potash content in 20 wells in Texas ranging from 3.91 to 12.40 per cent and in eight wells in New Mexico from 2.71 to 10.41 per cent.

Many land owners or lessees who were within one mile of the potash drill site in New Mexico declined to sign a contract, as provided in the potash act, to reimburse the government for the expense of exploration, therefore the government is said to have been automatically excluded from areas where better showings had been indicated by drill cuttings. Under the conditions named it is surprising that the results obtained are as favorable as they are.

Alleging attempts to extend the European monopoly in potash to the United States, the Department of Justice on April 7 filed an injunction suit in the U. S. District Court in New York City against a group of German and French manufacturers. The petition charged that, beginning May 1, the French and German companies had agreed to continue the division of the United States business, and, in addition, to select a single exclusive selling agency with which they will agree upon the prices to be charged for the potash sold in the United States.

POTATOES. The potato production in 1927 of 26 countries reporting to the International Institute of Agriculture, Rome, was estimated at 4,730,830,000 bushels, an increase of 21.2 per cent over the production in 1926 and of 10.5 per cent above the average yield for the five years 1921-1925, while the increases in acreage for these periods were only 3.5 per cent and 2.8 per cent respectively. A favorable season and an increased acreage in the most important producing countries, notably in Germany, Poland, France and Czechoslovakia, were largely responsible for the good results of the year. The production in the leading countries was reported as follows: Germany 1,395,341,000 bushels, Poland 1,115,348,000 bushels, France 629,960,000 bushels, Czechoslovakia 283,198,000 bushels, Spain 130,899,000 bushels, Belgium 111,359,000 bushels, England and Wales 111,328,000 bushels, and the Netherlands 90,021,000 bushels. Canada produced 79,878,000 bushels or 1,258,000 bushels less than in 1926 and 11,680,000 bushels less than the average for the five years 1921-1925. In South America, in the crop year 1926-27, Argentina produced 35,386,000 bushels, Chile 10,027,000 bushels, and Brazil 10,014,000 bushels. The Department of Agriculture estimated that the production of the United States for 1927 amounted to 402,149,000 bushels on 3,505,000 acres, the yield per acre being 114.7 bushels. This record compared with a yield of 354,328,000 bushels, an area of 3,122,000 acres, and an average yield per acre of 113.5 bushels in 1926. The increase in acreage in 1927 was largely in the Northwestern States.

The Department of Agriculture pointed out during the year that the average yield per acre in the last forty years has been increased by 39 per cent and the average annual production, as due to the higher acre yield, by 115,000,000 bushels. The average farm price per bushel Dec. 1, 1927, was \$6.4c, as compared with \$1.414 the year before, and at these prices the total

value of the two crops was \$387,870,000 and \$501,017,000 respectively.

All the states reported potato production, and the leading states and their yields were as follows: Minnesota 33,128,000 bushels, Maine 32,092,000 bushels, New York 28,620,000 bushels, Pennsylvania 26,400,000 bushels, Idaho 24,380,000 bushels, Wisconsin 23,920,000 bushels, and Michigan 23,120,000 bushels. The average yield per acre in Maine was 226 bushels and in Idaho 212 bushels, all other states producing less than 200 bushels per acre, including seventeen states with less than 100 bushels per acre. The average farm price per bushel on Dec. 1, 1927, ranged from 50c. in North Dakota to \$1.90 in South Carolina. The cost of potato production in 1926, according to a study made by the Department of Agriculture, was 52 c. per bushel in the North Central, 56c. in the Western, 64c. in the Central, 69c. in the Southeastern, 73c. in the Eastern, 74c. in the Northeastern, and 77c. in the West South Central States. In the year ended June 30, 1927, the United States exported 2,092,000 bushels of potatoes and imported 380,816,000 pounds.

The crop of 1927 was attacked by late blight in the northeastern and central potato regions and suffered from drouth and frost in the North Central States. Efforts continued to be put forth during the year, by potato-growers' organizations, to improve potato marketing methods. A report of a new world record of production, a yield of 64,707 pounds or over 1000 bushels, of "British Queen" potatoes on an acre of the F. H. Rindge Delta tract at Stockton, California, appeared in the press toward the close of the year.

POTTERY, ANCIENT. See **ANTHROPOLOGY**, under *New World Ethnography*.

POTTHAST, ERNEST HENRY. American artist, died in New York on March 10. He was born in Cincinnati, Ohio, on June 11, 1857, and at an early age became a pupil at the Cincinnati Academy, afterwards studying art at Antwerp, Munich, and Paris. He was elected a member of the National Academy in 1906. Among his exhibited museum paintings are "Dutch Interior" at the Cincinnati Museum; "On the Beach" and "Bathers" at the Brooklyn Institute Museum; "The Pilot" at the Hackley Art Gallery, Muskegon, Mich., and "A Holiday" at the Chicago Art Institute.

POTTS, CAPTAIN TEMPLIN MORRIS. American naval officer, died at Pasadena, Cal., March 22. He was born in Washington, D. C., Nov. 1, 1855, and educated at the Emerson Institute, Washington. He was graduated from the United States Naval Academy in 1876, and subsequently won successive promotions to become captain in 1908. He served on several battleships and was commander of the *Georgia* in 1909. For one year, 1905, he was naval governor of Guam. When he was retired on June 30, 1913, he was holding the post of director of naval intelligence at Washington.

POULTRY. See **LIVESTOCK**.

POULTRY CONGRESS. See **LIVESTOCK**.

POULTRY DISEASES. See **VETERINARY MEDICINE**.

POUNDS, CHARLES COURTICE. British actor, died in London on December 21. Born in London in 1862, he was educated at St. Mark's College, Chelsea, and studied at the Royal Academy of Music. He made his first appearance on the

stage at the Savoy in 1881 in the chorus of *Patience*. On his first visit to America, in 1885, he played Nanki Poo in *The Mikado* at the Fifth Avenue Theatre. After playing the same part in Berlin, Hamburg and Vienna, he returned to the United States for three seasons, singing in *Ruddigore*, *Princess Ida*, and other light operas. He returned to Europe and again visited New York in 1904 and 1914. In 1916 he appeared as Ali Baba in Oscar Asche's *Chu Chin Chow* in London, and continued to play this part throughout the five years' record run at His Majesty's Theatre.

POWELL, GEORGE TOWNSEND. American agriculturist, died at Brookfield, Mass., on May 20. He was born in Dutchess County, N. Y., Mar. 30, 1843, and educated at Harvard. He became widely known for his articles and lectures on horticulture and agriculture. He was the founder of the Agricultural Experts' Association, and from 1910 to 1914 was president of the New York Horticultural Society. He was among those interested in the establishment of the School of Practical Agriculture at Briarcliff Manor, N. Y.

POWER, FREDERICK BELDING. American chemist, died at Washington, D. C., March 27. He was born at Hudson, N. Y., and educated at the Philadelphia College of Pharmacy and the University of Strassburg. He served as assistant professor of analytical chemistry at the Philadelphia College of Pharmacy in 1881-83; professor of pharmacy and materia medica at the University of Wisconsin in 1883-92; director of the laboratories of Fritzsche Brothers in 1892; and from 1896 until 1914 he was director at the Wellcome Chemical Research Laboratories in London, England. In 1916 he became head of the phytochemical laboratory of the Bureau of Chemistry, Washington, D. C. Dr. Power made valuable original contributions to the chemistry of plant products, especially to our knowledge of both volatile and fatty oils, and, with Professor Roger Adams of the University of Illinois, he discovered a process for the manufacture of synthetic chaulmoogra oil, the specific which has proved effective in the treatment of leprosy. Dr. Power was the recipient of many decorations for pharmaceutical and chemical research work and in 1922 he received the Flueckiger gold medal.

POWER PLANTS. The capacity of central station power plants in the United States at the end of 1927 was nearly 29 million kv. a. (close to 40 million horse power) and the capacity of industrial power plants approximates 30 million horse power, making a total of 70 million horse power, exclusive of mines, electric railways, office buildings, hotels, public buildings, etc., on most of which there are no authentic data. If these be included, it is probable that the aggregate capacity of stationary power plants in the United States will approximate 80 million horse power.

During 1927 public utilities spent \$235,000,000 on new plants or extensions to existing stations, of which nearly two-thirds went into steam plants and one-third hydro-electric. This accounted for an increase in capacity of about 3,750,000 kv. a. Of this 2,600,000 kv. a. was in steam. Moreover, of the 75 billion kilowatt-hours generated by utilities during 1927, as reported by the U. S. Geological Survey, 60 per cent was from fuel.

Relatively few new steam stations went into

service in 1927, although many were extended. The most outstanding new plant was the Stanton Station at Stanton, Pa., owned jointly by the American Gas & Electric Co. and the Pennsylvania Power & Light Co. This was to have an ultimate capacity of 400,000 kilowatts of which 100,000 kilowatts had been installed. It burns pulverized coal and employs a steam pressure of 800 pounds.

Additions of considerable magnitude were made to the Crawford Avenue Station in Chicago, Hell Gate in New York, Hudson Avenue, in Brooklyn, Philo at Philo, Ohio, Trenton Channel (Detroit Edison Co.), Colfax near Pittsburgh, the Huntley Station in Buffalo, Long Beach Station of the Southern California Edison Co., and the Edgar Station near Boston. The last named placed in service an additional unit consisting of two 1200-pound boilers serving a 10,000-kilowatt high-pressure turbine, exhausting at 375 pounds to a 65,000-kilowatt turbine-generator. For further information on stations employing high steam pressures, see STEAM BOILERS.

There had been steady improvement year by year in station efficiency due to improved methods of combustion, greater recovery of waste heat, large units, higher pressures and more advantageous operating conditions. This is reflected in the present average of 1.84 pounds of coal per kilowatt hour as compared with 3.2 pounds of eight years previous. A few of the most efficient stations were attaining close to a pound of coal per kilowatt-hour and the record in 1927 for performance was held by the Columbia Station at Cincinnati which had produced a kilowatt-hour at 12,500 B. t. u. Therefore, although the output of electric generating stations had increased at an unprecedented rate, the quantity of fuel consumed by utilities had increased very slowly.

Trends in power station design included the use of larger units, both boilers and turbines, more general employment of higher steam pressures, extensive use of air preheaters and the general adoption of the regenerative cycle for heating feed water. Improvements continued in both stokers and pulverized fuel equipment, especially the unit mill which was being applied to several large stations as well as small ones. In the industrial power plant field large economies were also being effected through the installation of improved equipment. Higher steam pressures were being employed, pulverized coal or improved stokers applied, and high back-pressure or bleeder turbines used to provide a more economical supply of steam for process.

PRAIRIE PROVINCES. The name applied to the three Canadian provinces of Manitoba, Saskatchewan, and Alberta. Total area, 758,817 square miles (Manitoba, 251,832; Saskatchewan, 251,700; Alberta, 255,285). Population, according to the census of 1926, 2,067,682 (Manitoba, 639,056; Saskatchewan, 821,042; Alberta, 607,584). For production, etc., consult the articles on the respective provinces.

PRATT INSTITUTE. A non-sectarian educational institution, at Brooklyn, N. Y.; founded in 1887, and composed of four schools: Fine and applied arts, household science and arts, science and technology, and library science. The 1927 autumn enrollment was 4419, divided as follows: Arts, 1602; household science, 893; science and technology, 1899; library school, 25. There

were 175 members on the faculty, and 79 special lecturers. The library contained 140,000 volumes. President. Frederick B. Pratt, A.M., LL.D.

PREHISTORY. See ANTHROPOLOGY.

PRENTER, WILLIAM B. American labor leader and Locomotive Brotherhood president, died at Cleveland, Ohio, December 7. He was born in Philadelphia in 1855, and when six years old his parents took him to Belfast, Ireland, to be educated. As soon as he finished his schooling he became a telegraph operator, and when 19 years of age he went to Canada and began firing a locomotive on the Grand Trunk Railway. He was repeatedly reelected as an officer of the Brotherhood of Locomotive Engineers and was chairman of the Ottawa convention of the Brotherhood in 1896. His rise from that time on in the Brotherhood's affairs was sure and rapid, ending in his elevation to the presidency on June 17, 1925. He held high posts in ten of the Brotherhood's banks and in several investment companies.

PRESBYTERIAN CHURCH. The Presbyterian Church, with the Reformed Churches, rests on features of the Reformation brought forward by Zwingli and Calvin. It consists of bodies in the United States, the British Isles, and elsewhere, following the doctrinal and ecclesiastical system developed in Holland and France and more fully in Scotland under John Knox. The distinctively Presbyterian bodies of the United States are derived for the most part from bodies in Great Britain, but are in many respects similar to the Reformed churches in the United States, sprung from parent bodies in other parts of Europe, and particularly in Holland. The following organizations in the United States bear the Presbyterian name: Presbyterian Church in the United States of America; Presbyterian Church in the United States (South); Cumberland Presbyterian Church; United Presbyterian Church; Colored Cumberland Presbyterian Church; Reformed Presbyterian Church, General Synod; and Associate Synod of North America also known as the Associate Presbyterian Church. The Presbyterian churches of the United States have general affiliations with the Alliance of Reformed Churches throughout the World, and also with the General Council of the Presbyterian and Reformed Churches in America, a similar organization of purely American scope. Steps were taken at a meeting of the American section of the World Alliance at Richmond, Va., in 1925 to effect a union of the world and American bodies.

PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA. This is the largest body of the denomination, and is nationally organized in every State of the Union, with official mission stations in Alaska, Cuba, Porto Rico, and foreign lands. It comprised, in 1927, 46 Synods and 299 presbyteries. The annual General Assembly met in 1927 in San Francisco, California, May 26-June 1. Statistics for the year showed that there were 9961 ministers, 48,916 elders, 20,908 deacons. Churches numbered 9497 and communicants 1,927,268, an increase of 18,157 over 1926. Sunday school membership totaled 1,596,515, an increase of 15,735. The amount of \$62,782,907 was contributed for all purposes, of which \$5,093,460 was devoted to national missionary work; \$3,924,903 to foreign missionary work; \$1,681,721 to Christian education; and \$46,612,753 to congregational expenses. The denomination maintained 56 colleges and 13 theological seminaries.

The official medium of the denomination is the *Presbyterian Magazine* (monthly). Privately owned Presbyterian periodicals are *The Presbyterian Advance*, *The Presbyterian Banner*, and *The Presbyterian* (all weekly). Robert E. Speer, D.D., LL.D., senior secretary of the Presbyterian Board of Foreign Missions, was Moderator of the General Assembly in 1927-28. The chief permanent officer is the Stated Clerk, who in 1927 was the Rev. Lewis S. Mudge, D.D., LL.D., 514 Witherspoon Building, Philadelphia, Pa.

PRESBYTERIAN CHURCH IN THE UNITED STATES (SOUTH). This division of the Presbyterian denomination covers the territory commonly known as the Southern States. It was composed in 1927 of 17 Synods and 91 Presbyteries, with 3591 organized churches and 2280 ministers. The ruling elders numbered 15,715, and deacons 17,146. The total church membership was 439,621. The Sunday school enrollment was 422,343. The contributions for the year were: Current expenses, \$10,308,788, a gift of \$22.35 per capita; and benevolences, \$4,897,543, a gift of \$12.24 per capita; making the total gift per member \$34.59. This church had sent out and was supporting 499 missionaries in six districts, Africa, Brazil, China, Japan, Korea, and Mexico. These missionaries were assisted by 3806 native workers. In the six countries there were 47,879 church members and 71,331 members of Sunday schools. The office of the General Assembly and Bureau of Vacancy and Supply is located in Dallas, Texas. The Rev. J. D. Leslie, D.D., LL.D., is Stated Clerk and Treasurer.

PRESBYTERIAN CHURCH OF NORTH AMERICA, UNITED. A branch of the Presbyterian Church formed by the union of the Associate and the Associate Reformed churches (Secession and Covenanter) in Pittsburgh in 1858. It represents the earlier covenanter and secession movements of the denomination in Scotland, and unherited from them whatever was distinctive in the views and usages of the two branches. In organization and government it is in accord with other Presbyterian bodies, having the same courts-session, presbytery, synod and general assembly, and observing the same general methods of baptism, admission to church membership, and ordination to the ministry. The General Assembly convened in Washington, D. C., May 25, 1927. On that date there were 11 synods, 57 presbyteries, 902 congregations, 926 ministers, 5005 ruling elders, and a church membership of 171,678 in the United States. The total membership, including missionary fields, was 224,491. The Sabbath school enrollment was 176,725. There were 952 young people's societies, with a membership of 26,715; and 1646 missionary societies. The average pastor's salary was \$2452; congregational expenses, \$4,071,000; total contributions, \$8,099,936, an average per member of \$35.53; missionary contributions, \$2,000,805, an average of \$11.65 per member. The denomination supported 400 men and women in four foreign mission fields, and 411 men and women in homeland missions. It carried on medical work in 31 foreign hospitals and dispensaries; conducted educational work in 333 schools at home and abroad; maintained 9 colleges and 4 theological seminaries at home and abroad; reached 35,000 youth in its schools and colleges, and graduated more than 600 young men and women. During the year new houses of worship were erected at a cost of \$446,800. The

estimated value of the church property of congregations was \$27,386,747; value of parsonages, \$3,393,545; value of property and permanent funds of the mission boards, \$8,346,917; value of property and permanent funds of the colleges and seminaries, \$6,853,124; total value of property and permanent funds of the denomination, \$45,980,333. The organ of the church is the *United Presbyterian*, a church-owned, yet independent, weekly, published at Pittsburgh, Pa. M. G. Kyle, D.D., LL.D., of St. Louis, Mo., was the Moderator of the General Assembly and D. F. McGill, D.D., LL.D., Bellevue, Pa., was Stated Clerk.

PRESIDENTS, COLLEGE. See **UNIVERSITIES AND COLLEGES.**

PRIMATES. See **ANTHROPOLOGY**, under *Physical Anthropology*.

PRINCE EDWARD ISLAND. A Maritime Province of Canada; the smallest province in the Dominion, situated at the mouth of the Gulf of St. Lawrence and separated by Northumberland Strait from the mainland of New Brunswick and Nova Scotia. Area, 2184 square miles; population, according to the census of 1921, 88,615. The capital is Charlottetown, with a population of 12,347. The chief industries are agriculture, stock raising, fishing and the breeding of silver foxes. (For particulars of agriculture and livestock, see under **CANADA**.) The value of pelts marketed and live foxes sold for breeding purposes in 1925 was estimated at \$3,000,000. The total value of fisheries in 1925 was \$1,598,119 as against \$1,201,772 in 1924. The revenue for 1925 was \$740,076 and the expenditure \$745,338. The public debt on Dec. 31, 1925, was \$2,490,200 from which should be subtracted \$1,335,072, standing to the credit of the province at Ottawa. The province is under a lieutenant-governor and a legislative assembly of 30 members, elected for four years, a property qualification being required in the case of one-half the members and the other half being elected by universal male and female suffrage. Lieutenant-governor, Frank R. Heartz; Premier, Attorney-General, Secretary-Treasurer, J. D. Stewart; Public Works, H. F. McPhee; Ministers without Portfolio, J. W. P. McMillan, Murdock Kennedy, Adrian Arsenault, James A. McNeil, and Leonard Wood.

PRINCETON, BATTLE OF, ANNIVERSARY. See **Celebrations.**

PRINCETON UNIVERSITY. A non-sectarian institution for the higher education of men at Princeton, N. J.; founded in 1748. The 1927 autumn enrollment totaled 2450, of whom 2254 were undergraduates and 196 graduate students and fellows.

The total endowment in 1926 was \$16,930,000; the total income \$2,106,000; and the total expenditures were \$2,044,000. The number of books in the library was 625,000, exclusive of pamphlets, broadsides, manuscripts, etc.

The summer school of geology and natural resources, organized in 1926 (see 1926 **YEAR BOOK**), to facilitate for American and European students the study of the natural resources of North America, devoted its tour in 1927 to Canada. The total personnel of 24 included representatives of the following universities: Edinburgh, Geneva, Copenhagen, Brown, Clark, Cornell, Davidson, North Carolina, Princeton and Yale. There were in 1926-27, 273 faculty members and 44 assistants.

Important gifts to the library were: an endowment from Mrs. P. L. LeBrun, for the development of the valuable Montaigne and Rabelais collection, presented two years previous in memory of her husband; the presentation by his widow of the fine private library of Charles Richard Williams, '75, editor, poet and scholar. A unique gift was the Arthur Sachs Foundation, of \$150,000, from Arthur Sachs of New York, to finance *Art Studies*, a publication issued jointly by the Department of Art and Archaeology at Princeton and the Division of Fine Arts at Harvard. Another gift reported was a university theatre, given by Thomas N. McCarter, '88. Among the building operations in 1927 were the following: the completion of Lockhart Dormitory, and the extensions to the Graduate College and to the gymnasium; progress on the new chapel; the enlargement of McCormick Hall for the school of architecture; the beginning of the Engineering Building and the Chemical Laboratory.

A significant development of the year was the marked expansion of the industrial relations section of the department of economics, to meet the increased call for its services, not only from students and faculty at Princeton, but from all parts of the United States and such far countries as Australia and South Africa. President, John Grier Hibben, Ph.D., Litt.D., LL.D.

PROCOPE, HJALMAR. Finnish poet and playwright, died in Helsingfors, Finland, on September 25. He was born in Helsingfors on April 28, 1868, and was educated at the University of Helsingfors where he received the degree of M.A. in 1897. Having received a scholarship from the Finnish government in 1908 he went to Denmark, Germany and France to study the drama. Procope received several prizes for his literary efforts from the government of Finland and the Swedish Literary Society. His many published works include the poems *Diktter* (1900); *Roda Skyar* (1907); *I Sanden* (1915); *Selected Poems* (1920); and the plays *Belsazaro gastabud* (1905); *Medalfongen* (1922).

PRODUCE. See **HORTICULTURE.**

PROHIBITION. The status of this great public question remained very much the same as during the previous year: the dry States continued dry and the wet States remained wet. General Lincoln C. Andrews resigned his post on August 1, and was supplanted by Seymour Lowman; the Prohibition Unit was made a new bureau in the Department of the Treasury; Wayne B. Wheeler (q.v.) general counsel of the Anti-Saloon League died and there followed a reorganization; the debate continued, Senator Borah taking an active rôle, and statisticians on both sides continued to quote figures pointing to the results of the Eighteenth Amendment. In short, it was a year of little progress.

ADMINISTRATION. Secretary Mellon's hand in the management of Prohibition enforcement was shown increasingly as the year progressed. For one thing, important administrative changes were made. Roy A. Haynes, Harding appointee and Anti-Saloon League favorite, was definitely dropped from the service when in May Dr. James M. Doran was appointed Commissioner of Prohibition and Major Herbert H. White was named Assistant Commissioner (Mr. Haynes' former post). At the same time General Andrews, Assistant Secretary of the Treasury, in charge

of Prohibition enforcement, announced his resignation to take effect August 1. Word came, too, from Mr. Mellon's office that the new incumbent was to be Seymour Lowman, ex-Lieutenant Governor of New York, who was considered in many quarters a friend of the Anti-Saloon League. During the closing hours of the Congress, on March 3, was passed a measure that was hailed as making possible the reorganization of Prohibition enforcement. The chief divisions of the act provided for: (1) the placing of enforcement agents under the civil service; (2) the establishment of the Prohibition Unit as an independent bureau, separating it from the Bureau of Internal Revenue; (3) the centralization of authority in the office of the Secretary of the Treasury, (4) the strengthening of the office of Prohibition Commissioner to aid the Assistant Secretary of the Treasury in charge. The year saw several changes in the enforcement districts. The district of Florida was abolished and the State was merged into a new district consisting of South Carolina, Georgia, and Florida. There were other changes in the eastern States. The Bureau continued its policy of decentralization. The offices of supervisors of alcohol and brewery control and of wine control were discontinued as was that of the office of the chief investigator. The new office of chief special agent was created. During the fiscal year 1926-27, prohibition agents made 64,986 arrests, seizing 7127 automobiles and 353 boats. The arrests led to 36,546 convictions in Federal courts with 11,818 jail sentences. Federal court convictions aggregated 4477 years in jail sentences as well as \$4,143,040 in fines and forfeitures. During the same period (fiscal year ending June 30, 1927), the Bureau closed 2 concentration warehouses, 2 distillery warehouses, and 2 special bonded warehouses. There were at the end of June 28 concentration warehouses containing 22,053,141.8 gallons of distilled spirits. There were in addition 8 distillery warehouses and 2 general bonded warehouses, containing 1,466,920.1 gallons of distilled spirits, which had not yet been concentrated. At the end of the fiscal year the Bureau was carrying 344 office employees and 3942 field employees.

That the government had entered into the business of encouraging law-breaking through under-cover methods was widely charged. Facts were revealed in a report rendered the Senate by General Andrews as a result of a resolution. It was shown that the government was engaging in the rum-running and rum-selling business and was playing the rôle of spy and agent-provocateur, in order, of course, to trap the large-scale bootleggers. The Prohibition office's report contained the following admissions: (1) That government agents had engaged in rum-running between Canada and New York, purchasing and selling beer, whisky and wine. (2) That government agents operated a pool-room and still at Norfolk, Va., for the "purpose of cleaning up rum traffickers." (3) That government agents operated a bridge whist club in New York City "to enable them to establish intimate relations with smugglers." (4) That a government agent in Peoria, Illinois, pretended to be in the liquor traffic for the purpose of obtaining evidence. The news caused indignation, even in the dry Congress, and was followed at once by a statement from Secretary Mellon that under-cover methods would be abandoned. The

New York government night club was disavowed as not having had the sanction of higher officials.

In the summer, Mr. Seymour Lowman announced that the Prohibition Bureau was to be vested with the power of patrolling the border, and that special attention would be given to the Canadian frontier west of Buffalo. According to Mr. Lowman the seepage across the border was considerable and special efforts would be necessary. The Canadian officials reported that declared shipments of whisky from Canada were increasing, for the fiscal year ending March, 1927, totaling \$24,000,000 as compared with \$16,000,000 in 1925. Discussions were carried on with the Royal Canadian Commission for the purpose of actively enlisting Canadian support in the checking of the illicit traffic. Canada, on its side, complained that American bootleggers were smuggling their wares into the Provinces and poisoning Canadian citizens as well as interfering with the regular whisky industry.

Dr. James M. Doran, Prohibition Commissioner, announced that for 1928 the production of industrial alcohol would be reduced by from 5,000,000 to 10,000,000 gallons. During the fiscal year ending June, 1927, the legal production of alcohol totaled 95,000,000 gallons. The movement was prompted by the fact that considerable quantities of industrial alcohol fell into the hands of bootleggers, though this was the first effort on the part of the government to exert control in this industry.

The tendency to remove the Prohibition enforcement work from politics continued. In September, in a speech in New York State, Mr. Lowman said certain caustic things about Governor Smith's failure to enforce the Eighteenth Amendment, only to be silenced at once by his chief, Mr. Mellon.

At the end of the year there were rumors, not denied, that the Coast Guard's work in fighting rum runners had not proved as effective as was being claimed. The New York newspapers reported that for 1927 the combined forces of the Customs Patrol Service, Marine Police and the Coast Guard, operating from New York, had seized more than \$10,000,000 in contraband liquor and alcohol. Forty-six rum ships were captured and 300 men arrested. Stories were current that a new "Rum Row" was in process of being established, "literally in the shadow of the Statue of Liberty, with bases in Staten Island and at North River piers."

DEPARTMENT OF JUSTICE. Assistant Attorney-General Mabel W. Willebrandt, in charge of Prohibition enforcement, reported for the fiscal year ending June 30, 1927, an increase in fine collection and in civil business with a decrease in criminal business. During the year there were 2081 more civil cases terminated than during the previous year and there were 1859 more judgments in favor of the United States. Judgments in favor of the United States totaled \$352,097.25; the amount of fines, forfeitures and penalties imposed totaled \$5,646,709.09. The Assistant Attorney-General did not seem to think that smuggling by water craft had decreased. But during the fiscal year the government seized 320 domestic vessels engaged in the smuggling traffic as compared with 330 in the fiscal year 1925-26. Court decisions helped to clear the way considerably in the fight on water-craft smuggling. The Supreme Court, in *W. E. Dodge*

vs. United States (November, 1926), affirmed the right of any agency to seize smuggling craft, whether they were in Federal waters or no. In the *United States vs. Egan* (May 31, 1927) the Supreme Court upheld the Coast Guard's right to seize American vessels on the high seas, beyond the 4-league limit. During the year, to the eight treaties already in force allowing the boarding, searching and seizing of foreign rum-runners when within one hour's run of the coast, the government added two more, one with Spain (effective Nov. 17, 1926) and the other with France (effective Mar. 12, 1927). The Supreme Court in its decision in *The Ford et al. vs. United States* (April, 1927), approved the seizure of foreign vessels under these treaties, found the criminal prosecution of foreign subjects legal, and declared that persons abroad conspiring with persons in the United States to violate our Prohibition legislation could be prosecuted if apprehended in this country. Under the above treaties 25 British ships were seized during the year; 8 of these were forfeited; 2 were dismissed; 1 was appealed; and 3 were released. Some of the hauls were quite large. The first of these foreign conventions was signed with Great Britain, May 22, 1924. Since that time 48 vessels have been seized of which 20 were forfeited; 13 cases were pending, 7 dismissed, 2 appealed; 4 vessels released, 1 sold on claims, and 1 wrecked.

Another important Supreme Court decision, this time unfavorable to Prohibition enforcement, was handed down December 11 when the court ruled that liquor seizures by New York State troopers were illegal. The prosecution had contended that the troopers were acting as Federal agents but this the court denied and held the seizures illegal in view of the fact that search warrants had not been applied for. The decision was significant in view of the fact that in 1927 five States—New York, Maryland, New Mexico, Nevada, and Montana—had no Prohibition enforcement laws and therefore the troopers could not take the initiative unless they strictly abided by Federal law, that is to say, a search for evidence could not be made without a search warrant.

PHYSICIANS' PRESCRIPTIONS. Early in the summer the physicians assembled at their convention, in Washington, of the American Medical Association, indicated that they meant to give battle to the government's insistence upon limiting the amount of whisky prescribable. The existing law permitted doctors to prescribe a pint of whisky every ten days per patient. The proposal of the American Medical Association called for unlimited prescriptions of whisky, subject, however, "to such reasonable restrictions as may be thought wise and best after a conference with the head of the Prohibition Department." About the question there was considerable debate; how far alcohol was necessary in modern therapy; who is to guarantee that physicians will not prescribe whisky for well persons, etc. But about this fact there was little questioning: that it was up to the individual physician to decide for himself, and not by government fiat, that whisky had medicinal properties necessary in the curing of ill persons.

ANTI-SALOON LEAGUE. The outstanding event in the history of this organization, for the year, was the death of its general counsel, Wayne B. Wheeler (q.v.) Sept. 5. His death was followed by League reorganization. See **ANTI-SALOON LEAGUE**.

One of the results of the League's convention at Washington in December was the declaration of a new policy. League forces were to be divided into two: the old activities of political pressure and legislation seeking were to continue under the general superintendent, Dr. F. Scott McBride (successor to the late Wayne B. Wheeler); a new department for education and propaganda was to be set up under the head of Ernest H. Cherrington. For the latter a fund of \$10,000,000 was to be raised to carry on the work for five years. Mr. Cherrington had proved his worth in the field of publicity for under his direction there had been successfully functioning the Intercollegiate Prohibition Association and the World League Against Alcoholism. The latter's agent was the well-known "Pussyfoot" Johnson who had already established contacts in 35 countries. Dr. McBride, on the other hand, was a strong proponent of Mr. Wheeler's methods, the chief of which was to keep Congress in line. Consonant with this policy, the League consented to move its headquarters from Westerville, Ohio, to Washington. Mr. Cherrington's campaign was released to an early start when S. S. Kresge, five and ten cent store promoter, announced that he was giving half a million dollars toward the work (December 8). Before the banquet at which the announcement had been made was over an additional \$150,000 had been pledged.

DEBATE. *Pro.* In the autumn Senator Borah indicated that he planned to force the Republican Party to declare itself on the Prohibition question. Heretofore he had played a lone hand, but with the acquisition of power as head of the Republican Radical bloc in the Senate, and with the possibility of becoming the dry leader, Mr. Borah's move had interesting political significance.

Senator Borah attacked the doctrine of nullification and called upon those desirous of seeing the law enforced to sit in the conventions and compel the parties to accept the Eighteenth Amendment in their platforms. The Senator, of course, left himself open to attack. If the Eighteenth Amendment was to be enforced by Federal agencies, why then not the Fifteenth? The point was at once made by Senator W. E. Edge, to which Senator Borah replied that he was ready to back enforcement of the whole Constitution. Southern proponents of Prohibition found more trouble in answering the charge and their statements were made under difficulty.

The battle of statistics continued, Roger Babson and Prof. Irving Fisher leading the Prohibition cohorts. Professor Fisher denied that increased arrests for drunkenness, as a recent survey showed, indicated the failure of Prohibition. He declared "that while from 1920 to 1923 there was a tendency to revert to pre-Prohibition conditions, it appears, if these data be a true cross-section of conditions in America, that the movement of reaction has now spent itself."

More interesting, and more important, were the views of health authorities and vital statisticians. At a meeting of the American Public Health Association (Cincinnati, October 19), Dr. Louis I. Dublin declared that beginning with 1920 there had been a continuous rise in deaths from alcoholic poisoning. He denied that it had been established that Prohibition was advancing the health of the adult male population. In fact, male death rates over 35 years had increased

pointed for life, and a legislative assembly of 85 members elected for five years. Quebec is the only province in Canada in which women are not enfranchised or eligible for election to the legislature. Lieutenant Governor in 1927, N. Pérodeau; Premier, Attorney-General, and Minister of Municipal Affairs, L. A. Taschereau; Lands and Forests, H. Mercier; Treasurer, J. Nicol; Secretary, A. David; Agriculture, J. E. Caron; Colonization, Mines and Fisheries, J. E. Perrault; Public Works and Labor, A. Galipeault; Roads, J. L. Perron; Ministers without Portfolio, E. Moreau, L. Lapierre, J. H. Dillon.

QUEENS COLLEGE. A college for women at Charlotte, N. C.; founded in 1771; non-sectarian in purpose, but under the direction of the Presbyterian Church. The enrollment for the autumn of 1927 was 360. There were thirty-two members in the faculty, of whom a vice president and an assistant in modern languages were added in 1927. The library contained 8663 volumes. A new building, costing \$85,000, combining refectory and dormitory space, was added in the summer of 1927. The income for the year was \$130,000. President, William H. Frazer, D.D.

QUEENSLAND. A state in the Commonwealth of Australia situated north of New South Wales; the second largest of the constituent Australian states. Area, estimated at 670,500 square miles; population, according to the census of 1921, 755,972; estimated, July 1, 1927, 885,741. The movement of population in 1925 was: Births, 20,282; deaths, 7545; marriages, 6471. The immigrants in the same year numbered 93,979 and the emigrants, 82,274. Capital, Brisbane, with a population in 1926 (10-mile radius), of 274,260 (census).

During 1925 there were 1707 state schools (including 13 high schools and 156 provisional schools) with 4227 teachers and an average daily attendance of 106,994. The total value of all crops in 1926 was £12,181,917 as compared with £12,526,609 in 1925. The principal crops are green fodder, sugar cane, corn, wheat, cotton, hay, and bananas. The total value of the mineral production in 1925 was £2,012,677. Since the discovery of the gold fields in 1858 the value of the gold output, to the end of 1925, was £85,190,579. Coal is also an important mineral product (1,177,173 tons produced in 1925), and among the other mineral products are copper, tin, wolfram, lead, cobalt, etc. In 1925-26 the imports amounted to £13,756,654 and the exports to £26,384,916. The registered shipping in 1925 consisted of 145 sailing vessels of 2300 net tons and 86 steamers of 24,425 net tons. On June 30, 1926, 6240 miles of railways were open, of which 5964 were being worked.

Executive power is vested in a governor, who acts through a responsible ministry; and legislative power in a single chamber or legislative assembly of 72 members elected for three years (the legislative council was abolished in 1922). Governor in 1927, Sir T. H. J. C. Goodwin (appointed February, 1927); Lieutenant-Governor, W. Lennon; Prime Minister, W. McCormack.

During the first week in September the Labor Government of Queensland and the Railway Union had a short but severe struggle. The railway workers went on a strike and refused to handle the products of a sugar mill which was put on the "black list" because of trouble between the owners and the employees. The government which owned the railway met the situa-

tion by discharging all employees because of the impossibility of operating the road. At the same time it offered to reinstate all men who would promise to abide by the regulations of the railroad. The government offered temporary but practically futile relief by substituting motor transportation in the affected area, but the strike virtually tied up most of the business of the State. For a time there was a fear that a sympathetic strike might be called in the other states of the Commonwealth. The Labor government remained firm, however, and appeared to have the support of the other states as well as of the Commonwealth Government. The result was the complete breakdown of the strike on September 10, and the signing of the Government's agreement by the railway workers.

QUICKSILVER. In 1927 the world production of quicksilver was estimated at 115,000 flasks of 75 pounds each, or in excess of the output for both 1926 and 1925, when 104,000 flasks was the estimated world's production. Also, 1927 witnessed the highest prices ever recorded for the full period of the year, rising in the United States from about \$100 per flask at the beginning of the year to \$130 towards its end. Accordingly, the United States production increased from 20 to 25 per cent over the 7642 flasks which were reported in 1926. Outside of the United States the greatest increase was in Spain, where the Almaden Mines had a production of 52,500 flasks for the season closed on July 1, 1927, which was greater than any year previously reported. In Italy the production in the same period was said to be about the same as that of Spain, the Monte Amiata district increasing its production while the old Idria Mine in the Trentino, formerly Austrian territory, suffered a decline. In the United States the New Idria Mine in California was the largest producer, with the Chisos Mine in Brewster County, Texas, said to be second.

RABIES. An annotation in *The Lancet* (London) for July 16 summed up the status of this malady by stating that outside of Great Britain, Switzerland, and the Scandinavian countries it was still a scourge. The Pasteur treatment of active immunization did not reach a large share of the world's population, and since it must be given to the bitten at once it is not possible to be sure as to the proportion of bites which would have given rise to the disease. Statistics showed that a larger number of people were constantly seeking to benefit by the treatment. According to a recent computation by some Austrian physicians, the expectancy of death in the untreated bitten, the animal being shown to have been rabid, is 10 per cent, while in the bitten who are treated the expectancy of death is less than 1 per cent, including those who reach the institutions at a relatively late period. There had been no essential change in the mode of treatment since 1885, but there was a notable lack of standardization among the various institutes and the emulsion used in inoculation was prepared in a variety of ways. Recently the Phillips method of preparing the emulsion appeared to be responsible for an unusual record—but a single death from rabies in 1540 bitten treated patients. This figure was far below the average obtained in the numerous institutes. In theory this method should be tested everywhere, but, judging from the past, each institute will cling to its own procedure.

corporated in a general church programme adopted triennially.

In 1926 operating on a balanced budget the total expenditures were \$3,866,831.63. Of this sum the total expenditure for missions, domestic and foreign, was \$2,826,230.07, divided in practically even amounts between the domestic and foreign fields. The number of missionaries supported in whole or in part by appropriations through the Department of Missions during the year 1926 was as follows: American missionaries abroad, men 204, women 235; native staff abroad, men 1396, women 784; American missionaries in the United States, men 560, women 113; native staff in the United States, men 100, making a total of 3,392 persons representing the missionary staff in 1926. During the year 48 new missionaries were appointed.

In 1927 there were reported 6207 clergy, an increase of 48 over the preceding year. The total number of communicants was 1,218,941, an increase of 17,954 over the preceding year. The total contributions to all causes within the Church were \$44,743,842.64, an increase of \$1,430,126.06 over the preceding year. In 1927 there were 6000 Church schools, with 495,894 pupils, directed by 58,462 Sunday school teachers, an increase of 1481 over 1926. The fifteen theological seminaries of the Church reported a decrease of nine in the number of candidates for the ministry.

The National Council is assisted in its work by a group of cooperating agencies. The Woman's Auxiliary, through a thank offering each triennium, contributes nearly \$1,000,000 in that period for its work. Other cooperating agencies are the Brotherhood of St. Andrew for men; the Daughters of the King; the Guild of St. Barnabas for nurses; the Churchwomen's League for Patriotic Service; the Knights of St. Paul, the Knights of St. John, the Knights of Washington, and the Order of Sir Galahad, for boys; for girls and young women, the Girls' Friendly Society in America; for young people in general, the Young People's Fellowship. The Church Mission of Help is notable among affiliated organizations dealing with a wide range of Church interest and activity. The Church publishes *The Spirit of Missions*, *The Church at Work*, and *Bulletins* of the National Council, together with material dealing particularly with each department of the National Council. Six independently owned publications make an important contribution to the cultural life of the Church: *The Living Church*, weekly; *The Churchman*, weekly; *The Witness*, weekly; *The Southern Churchman*, weekly; *The American Church Monthly*; and *The Chronicle*, monthly. In addition there are 80 monthly diocesan publications in the home field and a score of others in the mission field.

The year 1927 was marked by the death of two among the bishops of the Church: the Rt. Rev. William Cabell Brown, D.D., of Virginia, and the Rt. Rev. Edwin Stevens Lines, D.D., of Newark (N. J.), who were succeeded in each case by Coadjutor Bishops previously elected: the Rt. Rev. Henry St. George Tucker, D. D., in Virginia, and the Rt. Rev. Wilson Reiff Stearly, D.D., in Newark. The Rt. Rev. Thomas Casady, of Omaha (Nebr.), was elected Missionary Bishop of Oklahoma to succeed the Rt. Rev. Theodore Payne Thurston, D.D., resigned. The Rt. Rev. Nathaniel S. Thomas, D.D., Missionary Bishop of Wyoming, resigned and the vacancy was not

filled during the year. The headquarters of the National Council are in the Church Missions House, 281 Fourth Avenue, New York City.

PRUSSIA, prish'a. A constituent republic of the German republic; a kingdom of the German Empire until the October revolution of 1918; proclaimed a republic Nov. 13, 1918. Capital, Berlin. Area, Apr. 1, 1925, 112,625 square miles, as compared with 135,134 square miles before the war; population, according to the census of 1925, 38,054,172, as compared with 40,165,219 in 1910. The later figures for area and population are exclusive of the Saar district, Eupen and Malmédy, and the territory of Upper Silesia which was ceded to Poland; showing a loss to Prussia, as a result of the Treaty of Versailles, of 21,645 square miles and a population of 4,601,628. The movement of population in 1925 was: Births, 824,761; deaths, 478,855; marriages, 297,237. The chief cities with their populations in 1925, according to provisional figures of that census year, are: Berlin, 4,013,588; Cologne, 698,064; Breslau, 554,801; Essen, 468,696; Frankfurt-on-Main, 461,849; Düsseldorf, 431,096; and Hanover, 422,435. The accompanying table from the *Statesman's Year Book* for 1927 shows the area under the principal crops and the yield in metric tons for the year 1925:

	Ares	Tons
Wheat	2,243,811	2,027,565
Rye	5,887,594	6,226,397
Summer barley	1,843,326	1,485,431
Oats	5,767,896	4,028,840
Potatoes	4,643,879	8,836,890
Hay (meadow)	6,932,318	10,628,112

In 1925 vineyards had an acreage of 39,921 with a yield of 9,411,454 gallons of wine valued at 18,721,144 marks. On Dec. 1, 1925, the livestock included: Cattle, 9,616,560; sheep, 3,177,505; swine, 10,969,519; goats, 2,220,276; horses, 2,712,763; and poultry, 44,001,181. The chief minerals are coal, lignite, iron ore, and salt. The railway mileage, which has been taken over by the federal government, is about 20,000. The government is under a diet and a state council, the members of the former being elected for four years by secret and direct ballot on the basis of proportional representation. The latter is elected by the provincial assemblies on the basis of one for every 50,000 inhabitants. The executive, which exercises the functions of the former king, is vested in the ministry, which is appointed by the prime minister elected by the diet. As a result of the elections of Dec. 7, 1924, the following parties were returned: Social Democrats, 114; Centre (Catholics), 81; German National party, 109; National Socialists, 11; German People's party, 45; Democrats, 27; Communists, 44; Economic party, 11; German Hanoverians, 6; and Polish party, 2; total 450. The Prime Minister in 1927 was Otto Braun (Socialist), appointed Apr. 4, 1925.

PRZYBYSZEWski, STANISLAW. Polish dramatist, died at Warsaw on November 23. He was born in 1868 at Warsaw, and educated at Warsaw, Odessa and Berlin. He was the creator of the Polish modern theatre, and was classed as a dramatist of the first rank. One of his plays *Hopfen and Nietzsche* gained international fame. Although his plays at one time enjoyed great success in Poland and Germany he suffered during and after the World War.

PSYCHICAL RESEARCH. The Third International Congress of Psychical Research was held at Paris from Sept. 26 to Oct. 1, 1927. The papers dealt for the most part with theoretical questions and clinical reports were in a minority. Illustrative of the trend of the theoretical papers was the one by Sir Oliver Lodge on "Radiant Energy and Metapsychical Phenomena." The abstract thus summarizes his paper:

In science, a fact of universal range is this: that every psychical phenomenon is accompanied by a physical phenomenon; and that behind the purely material aspects of the universe there is the physical reality, which doubtless implies matter but which goes beyond matter. Physics in particular shows us that "without a unifying factor, matter would be chaotic. . . . We must seek to discover the nature of these imponderables: electricity, magnetism, light." An intermediary is necessary: he ether.

In psychology, the psychical faculties in whatever connection they may lie with the material organism cannot be explained solely on the basis of material cerebral forces. "The ether of the physicists can therefore be of use to psychology." Those who study the metapsychical phenomena are acquainted with facts that have suggested the idea of the reality of an ethereal body.

For the study of these metapsychical phenomena, a working hypothesis may be suggested. Here as elsewhere action at a distance is impossible; an intermediary, the medium, is necessary; that is to say, a source of energy to be exploited by the intelligent force that manifests. It is this energy which we must seek to give to the phenomena of metapsychics their highest degree of scientific certitude.

Doctor Ferdinand Cazzamalli read a paper on 'Electro-magnetic Waves in Correlation with Certain Psycho-sensorial Phenomena of the Human Brain.' A paper on "Some Critical Aspects of the Margery Case" was read by Malcolm W. Bird, of the American Society of Psychical Research. Two papers were read by Dr. Reitz of Leningrad, one on "Clairvoyance," and the other on "The Transmission of Thought."

A number of clinical papers were read, one of the most interesting being that of Dr. Walter Franklin Prince, of the Boston Society, who told how he had succeeded in curing two persons suffering from characteristic paranoias, of the "obsessing spirit" form. His method, as described in the printed abstract, was as follows:

He creates in the patients, by suggestion, a doubling of personality, the second personality being the presumed obsessing spirit: then he calls up the spirit and engages it in conversation, either directly or by means of automatic writing. The phenomena of obsession decrease progressively.

The International Federation of Spiritualists held a congress at Rochester, N. Y., during the first week of December. Several hundred spiritualists, some from distant parts of the world, attended. The congress placed a marker on the site of the Fox Sisters' home, at Hydesville, 30 miles east of Rochester, where modern spiritism is generally regarded to have originated on Mar. 31, 1848, following the rappings reported from a murdered peddler.

Among the significant papers read at the congress was one by George F. Berry, of Manchester, England, confirming the theory that all psychic phenomena were dependent upon the material substance, ectoplasm. Mr. Berry, who was president of the International Federation, confirmed his thesis by citing from the researches made by Dr. W. J. Crawford, of Queens College, Belfast, Ireland. Dr. Crawford's researches also showed, according to Mr. Berry, that mediums often showed loss of weight and actual shrinkage of feet and hands to half the normal size.

BIBLIOGRAPHY. New books on psychical re-

search include the following: Sir Oliver Lodge, *Science and Human Welfare*; Sir A. Conan Doyle, *Phineas*; Mrs. Champion de Crespigny, *The Dark Sea*; J. W. Dunn, *An Experiment with Time*; Casper S. Yost, *Patience Worth*; William Danmar, *Ghostology*; Walter Franklin Prince, *The Case of Patience Worth*; *The Case for and Against Psychical Research* (Clark University Symposium), edited by Carl Murchison.

PSYCHO-ANALYSIS. According to reports from Vienna at the end of 1927 a break in the ranks of European psycho-analysts was threatened over the question of religion. Keen disappointment was felt in many circles, particularly among Swiss psycho-analysts, over the attack on the general principles of religion carried on by Freud in his latest book, *Der Zukunftsillusion*, and this disappointment seemed likely to culminate in an open break.

Curiously enough, Freud's book does not deal directly with psycho-analysis and mentions it only occasionally. It is in the main a plea for scientific as opposed to religious values; science is exalted and religion is scorned as illusory and irrelevant to life. None the less, the fact that it was Freud who had made the pronouncement was likely to be interpreted, both by psycho-analysts and by the lay public, as indicating a genuine incompatibility between psycho-analysis and religion.

"Religious ideas are illusions," Freud declared in a newspaper interview discussing the contents of the book. "They are ideas contrary to the practical world, cosmic ideas coming from the madness which science in the last centuries has done much to dissipate. I know that religion has rendered many services to human culture, but that is not enough and one sees throughout a thousand years of religious life that religion has not bettered mankind to any appreciable extent."

"It is natural to-day, after what science has done for humanity in the last two hundred years, that people are feeling that religion is a burden. . . . We have reached a stage where the intellectual development of humanity is endangered by the superstitions of religion. There are too many instances on record. But we are now at the dividing point when must come complete severance of the two, when one must disappear before the other, which is to say that science will remain."

"I think mankind must renounce all illusions to allow of intellectual progress. It should do so for the benefit that intellectual soundness will be to the race. Man is helpless with religion, but science is a walking stick to support a progressive world. This is because religion neglects actual life for fiction. It cannot be victorious against actuality, which is science."

Hitherto the attitude of Freud, as expressed in his works on psycho-analysis, had been but mildly hostile to religion. In accordance with the general method of psycho-analysis religious phenomena were often explained as sublimations of the sex instinct and as compensations for repression. Despite this tendency to psychologize—and even to sexualize—religious truth, the method of psycho-analysis was accepted by a great many believing Protestants, and even by Protestant clergymen. These found in psycho-analysis a substitute for the confessional of the Catholic Church—the lack of which had been distinctly felt by a great many Protestant thinkers. One of the leading exponents of psycho-

analysis in Switzerland was Dr. Oscar Pfister, a Zurich clergyman, and hitherto he had found no difficulty in reconciling Protestant religious doctrine with the general method of psycho-analysis. Freud's latest book, however, was reported to have antagonized him, and he was preparing a reply to the doctrines of *Der Zukunftsillusion*. Another critic of Freud's book was Dr. Benedict Stofer, of Vienna, who, after discussing the book with Freud, admitted that it probably would prove a disappointment to those who awaited the last word on the subject of religion. He took the attitude, however, that, though psycho-analysis is a science, it had nothing in contradiction to religion and could be used with benefit by churchmen.

In the *Archives of Psycho-Analysis*, a new quarterly started in the United States under the editorship of L. Pierce Clark, there was an interesting discussion of the question of "lay psycho-analysis." The article, which was written by the editor himself, takes the view that inasmuch as most disorders treated by psycho-analysis are not organic or neurological there is no reason why they could not be adequately treated by psycho-analysts who were not medically trained.

Dr. Clark recognizes that the practice of lay analysis would probably meet with the opposition of the administrators of present medical laws, but urges a campaign of education, both of the public and of medical men.

The same volume of the *Archives* prints a translation of Freud's *Inhibition, Symptom and Anxiety*. The monograph is preceded by a preface by Ferenczi in which he says: "This little work, seemingly so modest, is in reality an attempt by Freud to bring his views on the mechanisms of the neurotic symptom-formation into harmony with the peak of his now successfully established metapsychology."

Among the other studies in the *Archives* are "A Psychological Study of Art vs. Science as illustrated in Leonardo da Vinci" (by L. Pierce Clark); "The Book of the It" (translated from the German by George Groddeck); "A Psycho-historical study of Akhnaton, first idealist and originator of monotheistic religion" (by L. Pierce Clark), and a number of clinical studies.

PSYCHOLOGY. NEWS AND NOTES. The 36th annual meeting of the American Psychological Association was held at Ohio State University, Columbus, Ohio, Dec. 28, 29, and 30. Prof. H. L. Hollingworth delivered the presidential address. A delegation of American psychologists also took part in the meetings of the American Association for the Advancement of Science, which met at Nashville, Tenn., on the same dates.

A special symposium on Feelings and Emotion was held at Wittenberg College, Springfield, Ohio, Oct. 20-23 under the honorary chairmanship of Dr. J. McKeen Cattell. The occasion was the opening of a new psychological laboratory under the direction of Prof. Martin L. Reymer. Among the American psychologists who contributed to the symposium were Professors Cannon, McDougall, Dunlap, Jastrow, Pillsbury, Seashore, Langfeld, Weiss, Hoisington, Howard, Prince, Bentlev, Carr, Washburn, Woodworth, Hollingworth, Stratton, Koffka, Gault and Brett. A number of European psychologists also took part in the discussion, either in person, or through contributed papers.

American psychology suffered a serious loss in

the death of Prof. Edward Bradford Titchener, of Cornell University, whose career is discussed elsewhere in this YEAR BOOK. (See TITCHENER, EDWARD BRADFORD.) Late in the year 1100 Russia came news of the death of Prof. Vladimir Michaelovich Bechterev on Dec. 24, 1927, at the age of 70. Professor Bechterev was one of the pioneers in the behavioristic approach to psychological science. Indeed it was the publication of the researches which he and his colleague Pavlov had carried out on the conditioned reflexes of animals which initiated the behavioristic movement in American psychology.

Professor Bechterev's latest activity was the founding of the Leningrad Brain Pantheon for the collection and study of brains of eminent men. According to the plan the brains were to be kept in glass bowls with gold name plates attached. Already a number of Russians had bequeathed their brains to this Pantheon, the first bequest having been that of Alexander Konty, writer and critic, who died recently. Chaliapin, the opera singer, had willed his brain, as had also a number of other living persons. On the other hand the relatives of Count Tolstoy refused to permit the removal of his brain to this institution. The idea and purpose of the Brain Pantheon is in line with Professor Bechterev's objective—not to say physiological—outlook on mental phenomena. His psychological writings, as translated into German and French, include: *Die Persönlichkeit und die Bedingungen ihrer Entwicklung und ihre Gesundheit; Objective Psychologie* (1913); *La Suggestion et son rôle dans la vie sociale* (1910); and *Psyche und Leben* (1908).

GENERAL AND THEORETICAL PSYCHOLOGY. The confusion of schools and doctrines continued. A reviewer in the *Psychological Bulletin* (vol. 24, p. 376) concludes a survey of recent textbooks in psychology as follows: "There is still very little agreement as to what constitutes 'the science of psychology' unless we restrict ourselves to the introductory pages, which, unfortunately, nearly always promise a more scientific treatment than the following (traditional, metaphysical, literary-poetic, or sermonizing) chapters actually present. Nevertheless, it is a sign of progress that at least in the introductory pages some kind of 'scientific' ideal is upheld. There is, however, even in these most recent books, no clear recognition of (what the reviewer regards as a fact) that a 'science' of human life does not deal with anything immaterial, cannot be anything but (to use the words of A. P. Weiss) *the science which describes the bio-social transformation of the animal-like infant into the civilized adult as we know him.*"

As an illustration of the present level of intellectual activity in psychology we give below Dr. O. L. Reiser's "The Behaviorist's Prayer" as published in the *Psychology Bulletin* (September, 1927). According to all appearances the "prayer" was written without any satirical intention.

The Behaviorist's Prayer

Thou Cosmic Movement Continuum! we petition thee to lend auditory discriminations to these our laryngeal contractions. Lower the threshold of thy sensory discriminations so that our neuromuscular-glandular activities do not expend themselves as wasted reflexes. May the alterations in the configurations of our pitifully finite electron-proton aggregates find sympathetic resonance in thy visual receptors.

May the threshold division of our receptor-conductor-effector mechanisms receive to the full the beneficence of thy cosmic bounty. Bathe our receptors in thy, ir-

analysis in Switzerland was Dr. Oscar Pfister, a Zurich clergyman, and hitherto he had found no difficulty in reconciling Protestant religious doctrine with the general method of psycho-analysis. Freud's latest book, however, was reported to have antagonized him, and he was preparing a reply to the doctrines of *Der Zukunftsillusion*. Another critic of Freud's book was Dr. Benedict Storfer, of Vienna, who, after discussing the book with Freud, admitted that it probably would prove a disappointment to those who awaited the last word on the subject of religion. He took the attitude, however, that, though psycho-analysis is a science, it had nothing in contradiction to religion and could be used with benefit by churchmen.

In the *Archives of Psycho-Analysis*, a new quarterly started in the United States under the editorship of L. Pierce Clark, there was an interesting discussion of the question of "lay psycho-analysis." The article, which was written by the editor himself, takes the view that inasmuch as most disorders treated by psycho-analysis are not organic or neurological there is no reason why they could not be adequately treated by psycho-analysts who were not medically trained.

Dr. Clark recognizes that the practice of lay analysis would probably meet with the opposition of the administrators of present medical laws, but urges a campaign of education, both of the public and of medical men.

The same volume of the *Archives* prints a translation of Freud's *Inhibition, Symptom and Anxiety*. The monograph is preceded by a preface by Ferenczi in which he says: "This little work, seemingly so modest, is in reality an attempt by Freud to bring his views on the mechanisms of the neurotic symptom-formation into harmony with the peak of his now successfully established metapsychology."

Among the other studies in the *Archives* are "A Psychological Study of Art vs. Science as illustrated in Leonardo da Vinci" (by L. Pierce Clark); "The Book of the It" (translated from the German by George Groddeck); "A Psycho-historical study of Akhnaton, first idealist and originator of monotheistic religion" (by L. Pierce Clark), and a number of clinical studies.

PSYCHOLOGY. NEWS AND NOTES. The 36th annual meeting of the American Psychological Association was held at Ohio State University, Columbus, Ohio, Dec. 28, 29, and 30. Prof. H. L. Hollingworth delivered the presidential address. A delegation of American psychologists also took part in the meetings of the American Association for the Advancement of Science, which met at Nashville, Tenn., on the same dates.

A special symposium on Feelings and Emotion was held at Wittenberg College, Springfield, Ohio, Oct. 20-23 under the honorary chairmanship of Dr. J. McKeen Cattell. The occasion was the opening of a new psychological laboratory under the direction of Prof. Martin L. Reymert. Among the American psychologists who contributed to the symposium were Professors Cannon, McDougall, Dunlap, Jastrow, Pillsbury, Seashore, Langfeld, Weiss, Hoisington, Howard, Prince, Bentley, Carr, Washburn, Woodworth, Hollingworth, Stratton, Koffka, Gault and Brett. A number of European psychologists also took part in the discussion, either in person, or through contributed papers.

American psychology suffered a serious loss in

the death of Prof. Edward Bradford Titchener, of Cornell University, whose career is discussed elsewhere in this YEAR BOOK. (See TITCHENER, EDWARD BRADFORD.) Late in the year from Russia came news of the death of Prof. Vladimir Michaelovich Bechterev on Dec. 24, 1927, at the age of 70. Professor Bechterev was one of the pioneers in the behavioristic approach to psychological science. Indeed it was the publication of the researches which he and his colleague Pavlov had carried out on the conditioned reflexes of animals which initiated the behavioristic movement in American psychology.

Professor Bechterev's latest activity was the founding of the Leningrad Brain Pantheon for the collection and study of brains of eminent men. According to the plan the brains were to be kept in glass bowls with gold name plates attached. Already a number of Russians had bequeathed their brains to this Pantheon, the first bequest having been that of Alexander Konty, writer and critic, who died recently. Chaliapin, the opera singer, had willed his brain, as had also a number of other living persons. On the other hand the relatives of Count Tolstoy refused to permit the removal of his brain to this institution. The idea and purpose of the Brain Pantheon is in line with Professor Bechterev's objective—not to say physiological—outlook on mental phenomena. His psychological writings, as translated into German and French, include: *Die Persönlichkeit und die Bedingungen ihrer Entwicklung und ihre Gesundheit*; *Objective Psychologie* (1913); *La Suggestion et son rôle dans la vie sociale* (1910); and *Psyche und Leben* (1908).

GENERAL AND THEORETICAL PSYCHOLOGY. The confusion of schools and doctrines continued. A reviewer in the *Psychological Bulletin* (vol. 24, p. 376) concludes a survey of recent textbooks in psychology as follows: "There is still very little agreement as to what constitutes 'the science of psychology' unless we restrict ourselves to the introductory pages, which, unfortunately, nearly always promise a more scientific treatment than the following (traditional, metaphysical, literary-poetic, or sermonizing) chapters actually present. Nevertheless, it is a sign of progress that at least in the introductory pages some kind of 'scientific' ideal is upheld. There is, however, even in these most recent books, no clear recognition of (what the reviewer regards as a fact) that a 'science' of human life does not deal with anything immaterial, cannot be anything but (to use the words of A. P. Weiss) *the science which describes the bio-social transformation of the animal-like infant into the civilized adult as we know him.*"

As an illustration of the present level of intellectual activity in psychology we give below Dr. O. L. Reiser's "The Behaviorist's Prayer" as published in the *Psychology Bulletin* (September, 1927). According to all appearances the "prayer" was written without any satirical intention.

The Behaviorist's Prayer

Thou Cosmic Movement Continuum! we petition thee to lend auditory discriminations to these our laryngeal contractions. Lower the threshold of thy sensory discriminations so that our neuromuscular-glandular activities do not expend themselves as wasted reflexes. May the alterations in the configurations of our pitifully finite electron-proton aggregates find sympathetic resonance in thy visual receptors.

May the threshold division of our receptor-conductor-effector mechanisms incline to the final beneficence of thy sense, bounding the sense of thy receptors in thy

methods by which the patient's individual problems would receive adequate attention. It has applied these same experiences to the study of the criminal, recognizing that from the first crime was a behavioristic problem.

"The National Committee knew, to begin with, that the old way of handling this problem, namely of dealing with the crime rather than the criminal, had outlived its usefulness; to treat all men who are guilty under the law of a felony as if they were alike, was flying in the face of everything that we have learned in the present century about human beings, and so the National Committee has taken the position that any programme for dealing with crime that has a reasonable chance of advancing the situation must be founded upon a knowledge of the sort of human material that we are dealing with, namely the criminal."

Dr. White's theory of the criminal echoes sentiments that are now quite current among psychiatrists and abnormal psychology and even among the lay public. In a speech before the New York State Crime Commission Governor Smith urged the appointment of a commission of highly-paid psychiatrists and criminologists to take charge of the sentencing of criminals. The plan was both widely praised and widely criticized, the chief criticisms being that psychiatrists tend to be too easy on criminals and also that there are not enough competent psychiatrists to meet the needs.

An editorial in the *Journal of Abnormal Psychology* (October, 1927) denies that abnormal psychology, in its present state, is altogether ready to solve the problem of crime. The editorial said:

This is not the place to insist upon the claims of the lawyer to the status of a scientist. But it is only fair to point out that the reactions of his client to the stimulus of common or statute law is a typical psychological phenomenon and that much of the lawyer's art is concerned with a process of conditioning stimulus or response in order to obtain a desired individual or social adjustment.

Law as a stimulus to conduct needs investigation by psychological methods. The law-maker, whether in the person of the lawyer seeking to mold the legal pattern towards the desired decision of his particular case, the judge with his eye upon a historical and logical consistency or the legislator groping for means to a determined social condition, needs a thorough study of legal stimulus and social reaction thereto. Such a study has never been made.

Dr. Abraham Meyerson's *The Psychology of Mental Disorders*, published during the year, is also skeptical of the psychiatric doctrine of crime. Crime, he believes, is a social and environmental phenomenon, and is conditioned only slightly, if at all, by the innate psychological constitution of the individual. The book, on the whole, is a very sane summary of the present-day theories of abnormal psychology. It treats mental disorders as individual diseases and does not admit the existence of a general state known as insanity.

Another excellent treatise published during the year is Dr. Bernard Hart's *Psychopathology*. Dr. Hart is concerned to demonstrate that psychopathology, despite the air of controversy which hangs over some of its theories, is an established science of which the medical practitioner may well avail himself.

Max F. Meyer's *Abnormal Psychology* is written by an academic psychologist rather than by a medical practitioner. It presents a system—and a system in terms of behaviorism. Other

textbooks on abnormal psychology are E. S. Conklin's *Principles of Abnormal Psychology* and J. E. Wallace Wallin's *Clinical and Abnormal Psychology*.

A book of curious interest is *The Invert and His Social Adjustment*, published by "Anomaly" with a preface by R. H. Thoules, a well-known British psychologist. The book is autobiographical in character, and presents the problem of sexual inversion without moral apologies. One of the theses of the author is that inversion differs radically from bi-sexuality, and that it is congenital in character. Referring to the theory that inversion is the result of childhood influences, the author says that if this were so half the human race would be condemned to the tragedy of inversion.

In addition to those mentioned an important book of the year in this field was J. S. Greene and E. J. Wells, *The Cause and Cure of Speech Disorders*.

SOCIAL PSYCHOLOGY. To judge from the year's books, Social Psychology was abandoning its efforts to become a rigid science and was reverting more and more to the humanistic approach on psychological problems. In place of the usual textbook of social psychology, written on the lines of McDougall or of behaviorism, we have a source book of readings and various books on human interest problems. Prof. William McDougall himself—whose *Social Psychology* went through some twenty editions and started an unending controversy on the nature and number of instincts—came forward this year with a book of popular advice on life's problems (everything from medicine to love and virtue included). The author frankly essays the rôle of sophist, selling wisdom on all manner of personal subjects, and doubtless there can be no objection to this sort of rôle provided the wisdom be not marketed under the ægis of impersonal science and provided that it is presented with some breadth of inspiration and style.

For some years now there has existed in Central Europe an interesting offshoot of the psycho-analytic movement in the shape of a school of individual psychology. The leader of the school was Alfred Adler, a Viennese physician who lectured in several American institutions during the past year. His lectures were published in printed form under the title of *Understanding Human Nature*, and the book furnished an opportunity to appraise his doctrines. Although the slogan of the school is "individual psychology" the subject matter of its researches is in reality social psychology. The school takes its cue from the phenomenon of the inferiority complex and its social and individual ramifications. Whether it be organic inferiority or inferiority of social status, the ultimate effect of this inferiority—as observed by the school—is a compensatory drive for perfection. The individual, defeated in one respect, seeks to realize himself in another. The school has hit upon an important truth—although it is one whose nature the philosophers have rather suspected—that the individual is not fixed in his constitution. He is not a creature of fixed instincts and endowments, but a rather a being that is in movement. It is this movement of the individual psyche that this group has set itself to study.

A list of the more important publications of

the year in this field is as follows: A. A. Roback, *The Psychology of Character*; William McDougall, *Character and the Conduct of Life*; Havelock Ellis, *A Study of British Genius*; Henri Delacroix, *Psychologie de l'art*; Grace A. de Laguna, *Speech, Its Function and Development*; Mehran K. Thomson, *The Springs of Human Action*; P. F. Valentine, *The Psychology of Personality*; Kimball Young, *Source Book for Social Psychology*; H. L. Hollingworth, *Mental Growth and Decline*; Alfred Adler, *Understanding Human Nature*; A. A. Goldenweiser and W. F. Ogburn, *The Social Sciences in their Interrelations*.

PUBLIC FINANCE, UNITED STATES. A review of public finance during 1927, from the Federal standpoint, centres around the income tax situation and the progress made in collecting installments of debt due from foreign countries. In both particulars the year was of substantial interest. Receipts ran unexpectedly heavy, the year ending June 30, 1927, affording the first opportunity for satisfactory analysis of the changes in the principal sources of revenue and in the distribution of the burden of taxation effected by the revenue act of 1926, which had been approved on February 26 of that year. Total ordinary receipts increased from \$3,962,755,690 in 1926 to \$4,129,394,441 in 1927, a net advance of \$166,638,751. The curtailments of tax rate made under the act of 1926 did not suffice to lessen the actual receipts of the Treasury, but on the contrary the income showed an advance, although the bulk of the increase came from sources other than internal revenue taxation. The accompanying table furnishes a general view of the development of the revenue situation within recent years.

Included in the receipts from income tax were back tax collections which amounted to an unusually large sum—\$331,476,826, as compared with a figure about \$35,000,000 less than that in 1926. The Treasury was successful in bringing its work much more nearly up to a current condition than had been feasible at any time in the past. Customs duties increased to \$605,499,983, an advance of approximately \$26,000,000. It was the first time that a year's receipts from customs exceeded \$600,000,000. Internal duties of one kind or another had been reduced considerably in the act of 1926, the result being seen in a shrinkage of about \$211,000,000 of collections from "other internal taxes." The rate changes which had been made in individual income tax in the act of 1926 were expected to reduce the revenue from that source very materially, but as a matter of fact receipts on that score, like receipts in general, were larger than in previous years, partly owing to larger dividend receipts by individual tax payers and partly owing to the fact that the cuts that had been made were in many cases more apparent than real.

FEDERAL EXPENDITURES. Ordinary expenditures for the fiscal year ending June 30, 1927, amounted (excluding public debt requirements) to \$2,640,800,000. The accompanying table furnishes a survey of the principal items of outlay for 1927 as compared with the preceding year.

As is evident from this table, the principal savings for the year were found in interest on the public debt, which was off about \$45,000,000, while minor savings were made in two or three other directions, one of which was outlay for local government and supervision of the Indians. On the other hand, considerable increases were observable, chiefly in connection with military outlays and general regulation and con-

* Excess of credits, deduct.

tiol, under which are included outlays for education and research, and the regulation or promotion of special groups of industries. The actual routine expenditures of the general government were lower by about \$400,000. Analysis of the budget showed, as in former years, the preponderance of outlays for war past and present. Only about one-sixth of the entire outlay was used for ordinary civil functions of all varieties combined. One half of the entire outlay went for the service of the public debt, two-fifths of this half being used for interest and premium payments and three-fifths for debt retirement. Current military expenditures and pensions required about one-third of the entire outlay. In the fiscal year 1927, expenditures for interest on the public debt exceeded by over \$140,000,000 the aggregate amount of ordinary civil expenditures and exceeded the amount of all retirements of the public debt by nearly \$70,000,000.

THE SURPLUS. Excess of receipts over expenditures left the government for the fiscal year with the largest surplus it had enjoyed at any time since the war, the total being about \$636,000,000. The following table furnishes the details of surplus development during the past few years.

ORDINARY RECEIPTS AND EXPENDITURES
CHARGEABLE AGAINST ORDINARY
RECEIPTS, 1920 TO 1927

[On basis of daily Treasury statements (unrevised)]

Fiscal year	Total ordinary receipts	Expenditures chargeable against ordinary receipts	Surplus
1920. .	\$6,694,565,888	\$6,482,050,191	\$212,475,197
1921. .	5,624,932,980	5,538,209,189	86,723,771
1922... 4,109,104,150	3,795,302,499	313,801,651	
1923... 4,007,135,480	3,997,478,020	309,657,460	
1924... 4,012,044,701	3,506,877,715	505,166,986	
1925. .	3,780,143,684	3,329,643,446	250,505,238
1926... 3,962,755,690	3,584,937,878	377,767,817	
1927. .	4,129,394,441	3,493,584,519	635,809,922

This surplus was, however, viewed by the Treasury Department as an "anomaly," inasmuch as about two-thirds of it resulted from sales of so-called capital assets (obligations of railroad companies taken by the government during the war, etc.) and from back collections of taxation, in excess of tax refunds. The result was to give a large "book" surplus, which probably did not represent very accurately the actual income position of the Department for the year. Nevertheless, the situation thus exhibited was such as to inspire confidence in public finance and to strengthen the credit of the government very materially.

PUBLIC DEBT SITUATION. While the French government continued to defer ratification of the debt-funding treaty which had been concluded during the preceding year, it nevertheless undertook to make regular payments under the treaty on the same basis as if the document had been signed. Accordingly, the government was in position to credit the amortization payments under the entire group of debt liquidation arrangements that had been concluded by the World War Debt Funding Commission. During the fiscal year 1927, the entire debt was reduced from \$19,643,183,079 to \$18,510,174,266, an aggregate reduction of \$1,133,008,813. This reduction was brought about through normal retirements of \$519,563,844, which sum was chargeable against ordinary receipts in accordance with the

established debt payment programme, and \$613,444,968 of surplus which was transferred to debt settlement account from ordinary balances. The total amount received from foreign governments under debt settlements (included in the foregoing reductions) was approximately \$160,000,000. The table on p. 675 shows the debt situation in condensed form.

TREASURY FINANCE. The outstanding event of the year in Treasury finance was the maturing of the Second Liberty Loan on November 15. There were outstanding about \$3,083,671,700 Second Liberty Loan $4\frac{1}{2}$ per cent Bonds and \$20,848,350 Second Liberty Loan 4 per cent Bonds. As at the beginning of the year, conditions seemed to warrant the belief that the government could sell securities at a $3\frac{1}{2}$ per cent rate. An offer of refunding notes was made on this basis and a considerable quantity of the bonds were retired prior to July 1. Another offer of similar kind was made during the early autumn with the result that on October 31 all of the loan had been refunded with the exception of about \$757,545,500. The bulk of this latter amount was ultimately taken up through the issuance of Treasury certificates, a small amount of course remaining undeeded, as is usually the case with all large issues of bonds which are in the hands of many small holders. During the year, five issues of interest-bearing securities were offered to the public for cash subscription for the purpose of financing maturing certificates and bonds, and all were successfully floated at rates which, in some cases, ranged as low as $3\frac{1}{8}$ per cent for short-term issues. Unusually favorable conditions for the sale of public securities were attributable to the facts that there had been an exceptionally easy money market during the early part of the year and that this money market was maintained on an unusually favorable basis by the adoption of a very low rate discount policy on the part of the Federal Reserve banks. The combined effect of all these natural and artificial causes thus operating was to bring about a situation in which Treasury obligations could be sold on a more economical footing, so far as the government was concerned, than at any time since the war.

LEGISLATION RECOMMENDED. Further reductions of the income tax had been earnestly demanded by the business community ever since the adoption of the tax revision law of 1920 which had proven in a good many ways disappointing. Comparatively early in 1927, Federal authorities, impressed by the large size of the surplus then in sight, had begun to fore-shadow an income tax reduction law and this was proposed to Congress, after survey and modification by the Ways and Means Committee, at the opening of the session in December, 1927. The act was promptly passed in the House. In accordance with recommendations of the Treasury Department, the proposed measure provided for a reduction of the corporation tax, certain readjustments in the personal income tax schedule, an abatement of miscellaneous taxes (the so-called "nuisance taxes") and a number of other modifications. Contrary to the recommendations of the Secretary of the Treasury, the proposed measure did not provide for the repeal of the estate tax, while it did enlarge the proposed repeals or modifications of the "nuisance taxes" (taxes on admissions, dues, etc.), the total reduction thus provided amounting in the aggregate

PRELIMINARY STATEMENT OF THE PUBLIC DEBT OUTSTANDING OCTOBER 31, 1927, BY ISSUES
[On basis of daily Treasury statements (unrevoked)]

Bonds (pre-war)		
First Liberty loan of 1932-1947	1,089,156,850 00	\$767,271,910 00
Second Liberty loan of 1927-1942	757,512,400 00

gate to about \$280,000,000 instead of \$225,000,000 which had been named by the Secretary of the Treasury as a maximum. Among other important changes the new legislation called for certain alterations in the administrative sections of the law and particularly in the provision of a large expert staff, capable of more promptly disposing of tax appeals and so enabling the Treasury Department to bring its work up to the current condition.

BUDGET ESTIMATES FOR COMING YEAR. Estimates of outlay for the coming year were, as usual, prepared by the Treasury, together with the forecast of the probable situation in the fiscal year 1929. As thus submitted to Congress, the expectation for 1928-29 may be briefly summarized as follows:

The fact that a surplus of \$455,000,000 was thus foreshadowed by the Treasury for the fiscal year ending June 30, 1928, led the United States Chamber of Commerce to make strong recommendation to the Treasury that the curtailment of income taxation to be made in the pending reform measure should be allowed to run up to an aggregate of \$400,000,000—a recommendation sharply rejected both by the Secretary of the Treasury and the President on account of their belief that the items going to make up the surplus would materially fall off during the fiscal year of 1929—a situation which, according to them, would have necessitated almost immediate action reinstating the older income tax requirements. This would, in their view, have been tantamount to introducing an instability

SUMMARY OF RECEIPTS AND EXPENDITURES ON THE BASIS OF DAILY TREASURY STATEMENTS

	Actual, fiscal year 1927	Estimated, fiscal year 1928	Estimated, fiscal year 1929

QUEBEC, kwě-bék'. The largest province in Canada, and one of the four original provinces in the present Dominion of Canada; bounded on the west by Hudson Bay and Ontario, on the north by Hudson Strait, on the east by Labrador, and on the south by New Brunswick, the United States, and southern Ontario. Area, 703,653 square miles; population, according to the census of 1921, 2,361,199, of whom 1,038,128 were rural, 357,295 of British origin, and 1,889,090 of French origin. Capital, Quebec. The chief cities with their populations, according to municipal statis-

year 1926 were as follows: Wheat, 64,000 acres, 1,056,000 bushels; oats, 1,856,000 acres, 56,051,000 bushels; barley, 124,000 acres, 3,013,000 bushels; rye, 12,500 acres, 205,000 bushels; flax, 2500 acres, 22,000 bushels; mixed grains, 115,000 acres, 2,956,000 bushels; other grains, 237,000 acres, 4,923,000 bushels; potatoes, 159,000 acres, 13,769,000 cwt.; roots, 34,000 acres, 5,940,000 cwt.; hay and clover, 4,153,000 acres, 4,610,000 tons; fodder corn, 88,000 acres, 667,000 tons.

Quebec is the chief Canadian province in the production of pulpwood, having more than half of the Canadian production. The value of mineral production in 1925 was \$23,824,912. The total imports for consumption in 1924-25 amounted to \$222,536,180; total exports, \$355,115,463. The revenue for 1927 was \$30,924,997.01; expenditure, \$29,078,702.89. The public debt, as of June 30, 1927, was \$58,812,951.45. Quebec has 5248.22 miles of railway, including 397 miles of electric tramway. At the head of the government is a lieutenant-governor appointed by the governor-general of Canada, who acts through a responsible ministry; legislative power is vested in a bicameral body, a council of 24 members ap-

pointed for life, and a legislative assembly of 85 members elected for five years. Quebec is the only province in Canada in which women are not enfranchised or eligible for election to the legislature. Lieutenant Governor in 1927. N. Pérodeau; Premier, Attorney-General, and Minister of Municipal Affairs, L. A. Taschereau; Lands and Forests, H. Mercier; Treasurer, J. Nicol; Secretary, A. David; Agriculture, J. E. Caron; Colonization, Mines and Fisheries, J. E. Perrault; Public Works and Labor, A. Galipeault; Roads, J. L. Perron; Ministers without Portfolio, E. Moreau, L. Lapierre, J. H. Dillon.

QUEENS COLLEGE. A college for women at Charlotte, N. C.; founded in 1771; non-sectarian in purpose, but under the direction of the Presbyterian Church. The enrollment for the autumn of 1927 was 360. There were thirty-two members in the faculty, of whom a vice president and an assistant in modern languages were added in 1927. The library contained 8663 volumes. A new building, costing \$85,000, combining refectory and dormitory space, was added in the summer of 1927. The income for the year was \$130,000. President, William H. Frazer, D.D.

QUEENSLAND. A state in the Commonwealth of Australia situated north of New South Wales; the second largest of the constituent Australian states. Area, estimated at 670,500 square miles; population, according to the census of 1921, 755,972; estimated, July 1, 1927, 885,741. The movement of population in 1925 was: Births, 20,282; deaths, 7545; marriages, 6471. The immigrants in the same year numbered 93,979 and the emigrants, 82,274. Capital, Brisbane, with a population in 1926 (10-mile radius), of 274,260 (census).

During 1925 there were 1707 state schools (including 13 high schools and 156 provisional schools) with 4227 teachers and an average daily attendance of 106,994. The total value of all crops in 1926 was £12,181,917 as compared with £12,526,609 in 1925. The principal crops are green fodder, sugar cane, corn, wheat, cotton, hay, and bananas. The total value of the mineral production in 1925 was £2,012,677. Since the discovery of the gold fields in 1858 the value of the gold output, to the end of 1925, was £85,190,579. Coal is also an important mineral product (1,177,173 tons produced in 1925), and among the other mineral products are copper, tin, wolfram, lead, cobalt, etc. In 1925-26 the imports amounted to £13,756,654 and the exports to £26,384,916. The registered shipping in 1925 consisted of 145 sailing vessels of 2300 net tons and 86 steamers of 24,425 net tons. On June 30, 1926, 6240 miles of railways were open, of which 5964 were being worked.

Executive power is vested in a governor, who acts through a responsible ministry; and legislative power in a single chamber or legislative assembly of 72 members elected for three years (the legislative council was abolished in 1922). Governor in 1927, Sir T. H. J. C. Goodwin (appointed February, 1927); Lieutenant-Governor, W. Lennon; Prime Minister, W. McCormack.

During the first week in September the Labor Government of Queensland and the Railway Union had a short but severe struggle. The railway workers went on a strike and refused to handle the products of a sugar mill which was put on the "black list" because of trouble between the owners and the employees. The government which owned the railway met the situa-

tion by discharging all employees because of the impossibility of operating the road. At the same time it offered to reinstate all men who would promise to abide by the regulations of the railroad. The government offered temporary but practically futile relief by substituting motor transportation in the affected area, but the strike virtually tied up most of the business of the State. For a time there was a fear that a sympathetic strike might be called in the other states of the Commonwealth. The Labor government remained firm, however, and appeared to have the support of the other states as well as of the Commonwealth Government. The result was the complete breakdown of the strike on September 10, and the signing of the Government's agreement by the railway workers.

QUICKSILVER. In 1927 the world production of quicksilver was estimated at 115,000 flasks of 75 pounds each, or in excess of the output for both 1926 and 1925, when 104,000 flasks was the estimated world's production. Also, 1927 witnessed the highest prices ever recorded for the full period of the year, rising in the United States from about \$100 per flask at the beginning of the year to \$130 towards its end. Accordingly, the United States production increased from 20 to 25 per cent over the 7642 flasks which were reported in 1926. Outside of the United States the greatest increase was in Spain, where the Almaden Mines had a production of 52,500 flasks for the season closed on July 1, 1927, which was greater than any year previously reported. In Italy the production in the same period was said to be about the same as that of Spain, the Monte Amiata district increasing its production while the old Idria Mine in the Trentino, formerly Austrian territory, suffered a decline. In the United States the New Idria Mine in California was the largest producer, with the Chisos Mine in Brewster County, Texas, said to be second.

RABIES. An annotation in *The Lancet* (London) for July 16 summed up the status of this malady by stating that outside of Great Britain, Switzerland, and the Scandinavian countries it was still a scourge. The Pasteur treatment of active immunization did not reach a large share of the world's population, and since it must be given to the bitten at once it is not possible to be sure as to the proportion of bites which would have given rise to the disease. Statistics showed that a larger number of people were constantly seeking to benefit by the treatment. According to a recent computation by some Austrian physicians, the expectancy of death in the untreated bitten, the animal being shown to have been rabid, is 10 per cent, while in the bitten who are treated the expectancy of death is less than 1 per cent, including those who reach the institutions at a relatively late period. There had been no essential change in the mode of treatment since 1885, but there was a notable lack of standardization among the various institutes and the emulsion used in inoculation was prepared in a variety of ways. Recently the Phillips method of preparing the emulsion appeared to be responsible for an unusual record—but a single death from rabies in 1540 bitten treated patients. This figure was far below the average obtained in the numerous institutes. In theory this method should be tested everywhere, but, judging from the past, each institute will cling to its own procedure.

RACIAL STUDIES. See ANTHROPOLOGY.

RACING. Thoroughbred racing in 1927 was far from epochal in the history of the sport, but nevertheless there was a marked increase in interest attached to the various meetings held throughout the United States. England and France. Harry Payne Whitney, with estimated earnings of \$500,000, was once more the leading winning owner in the United States. His stable captured the Preakness with Bostonian and the Kentucky Derby with Whiskery. Brown Bud and Osmand also helped swell the Whitney winnings. Mrs. Payne Whitney proved the greatest money winner on the New York courses, her Greentree Stable netting her nearly \$175,000 in purses. H. F. Sinclair ranked second with about \$160,000. Mrs. John D. Hertz of Chicago, owner of Anita Peabody and Reigh Count, was another owner to reap a rich harvest in stakes. Samuel C. Hildreth topped the trainers by turning out 72 winners, Max Hirsch being second with 38.

Honors among the horses in the older division were shared by Crusader which began the season well, only to be forced out of competition early by injuries. Peanuts, Little Mals and Chance Play. Black Maria proved the best of her sex with Happy Argo leading the sprinting division. Display was exhibiting remarkable stamina as the season drew to its close.

Nimba shone among the three-year-olds with her victories in the American Oaks, the Alabama and the Lawrence Realization. Among the juveniles Reigh Count and his stablemate, Anita Peabody, rated best. Other notable horses in this division were Brooms and Dice, the latter meeting an untimely death.

Earl Sande, one of the most prominent American jockeys, was found guilty of fouling the fleet Reigh Count in the Pimlico Futurity and suspended indefinitely by the Maryland State Racing Commission. He was granted a special hearing and his employer, Joseph E. Widener, made a plea for leniency, but to no avail.

The winners of the principal turf events in the United States were as follows: Futurity, Anita Peabody; Preakness, Bostonian; Kentucky Derby, Whiskery; Hopeful, Brooms; Belmont Stakes, Chance Shot; Withers, Chance Shot; Saratoga Special, Ariel; Travers, Brown Bud; Suburban Handicap, Crusader; Metropolitan Handicap, Black Maria; Saratoga Cup, Chance Play; Brooklyn Handicap, Peanuts; Latonia Derby, Handy Mandy (new record, 2:28 3-5).

Call Boy, owned by Frank Curzon, won the English Derby in 2:34 2-5, record time for the new course. The Grand Prix de Paris went to Piterari, owned by M. P. Moulings. It was estimated that \$1,500,000,000 was wagered on horse racing in Great Britain during 1927.

HAWKES RACING. This sport flourished in 1927, the purse money hung up on the Grand Circuit alone amounting to \$500,000. Guy McKinney, four-year-old trotting stallion, was the leading performer of the year, his 1:58 2-4 for the mile at Phoenix, Ariz., on November 24, setting a new world's record. The Hilly Kitchin was the best of the three-year-old trotters while Piterari carried off the stakes among the two-year-olds. Isador Miller, 1926 3-4 winner of the \$20,000 Hawthorne Stakes, was the greatest winner of the year. The champion was the best of the three-year-olds of 1927, the winner of the \$20,000 Hawthorne Stakes, was the greatest winner of the year. The champion was the best of the three-year-olds of 1927, the winner of the \$20,000 Hawthorne Stakes, was the greatest winner of the year.

RACQUETS. New champions were the order in racquets, squash racquets, squash tennis and court tennis during 1927. Clarence Pell of New York regained the racquets title from Stanley G. Mortimer of Tuxedo while in squash racquets Myles Baker of the Harvard Club succeeded W. Palmer Dixon, former Harvard club captain, as champion. In squash tennis Rowland B. Haines of the Columbia University Club carried off the laurels. Fillmore Van S. Hyde of the Harvard Club not defending his title. G. Suydam Cutting of New York who succeeded to the court tennis championship in 1926 when Jay Gould retired from singles competition after twenty years, failed to defend his title which went to George Huban, a young Englishman, living in Chicago. Gould with William C. Wright, Jr., of Philadelphia again captured the court tennis doubles championship while Pell and Mortimer regained the racquets doubles title from Robert Gardner and Howard Linn of Chicago.

The squash racquets season was enlivened somewhat by the visit paid to Canada by an English team headed by Victor Acazalet. The invaders captured the Lapham Cup in a series of matches played at Toronto, scoring 17½ points. The United States team finished second with 16½ and Canada third with 11. Jock Soutar of Philadelphia successfully defended his world's professional court tennis championship against Walter Kinsella and his racquets title against William Standing. Frank Ward of the City A. C., New York, retained his world's open squash title.

RADCLIFFE COLLEGE. A non-sectarian college for women at Cambridge, Mass.; founded in 1879. The enrollment for the autumn of 1927 was 1068, distributed as follows: regular students, 728; graduates, 299; special students, 43. Instruction was given to the students of the College by 208 teachers from Harvard University. The productive funds amounted to \$1,433,699, and the income for college purposes to \$449,000. President, Ada Louise Comstock, A.M., Litt.D., L.H.D., LL.D.

RADIO. An innovation in broadcasting was inaugurated by the General Electric Co. at its station WGY, near Schenectady, N. Y., in the employment of power of 100 kilowatts. This was the first time so much power had been installed for the purpose of commercial broadcasting. A feature of this development was the new transmitter, which was remarkable for the fact that it occupied less than one-half the space taken up by the 50-kw. transmitter previously used. It had a radio power amplifier whose frequency was controlled by a quartz crystal and a modulator bank, with its modulation reactors and speech input equipment. There were two 100-kw. tubes in the amplifier unit and three in the modulator unit. These tubes, or radiotrons, had copper anodes almost 3 ft. long and 3¼ inches in diameter. Filament and grid leads were brought out through the top of a glass cylinder about 19 inches long and 6 inches in diameter. The radiotron was 50 inches long and required 210 amperes at 22 volts for excitation of the filament. Two radiotrons were ordinarily used in parallel. The antenna was vertical and consisted of a cage 3 ft. in diameter and 20 ft. high. Power operation was necessary for the excitation of these large tubes and the antenna was operated by a motor. The antenna was operated by a motor.

THE FIRST FEDERAL RADIO COMMISSION

LEFT TO RIGHT, COMMISSIONERS HENRY A. BELLOWS, EUGENE O. SYKES, ADMIRAL W. H. G. BULLARD, VICE

Underwood & Underwood

for the transmitter, 60 gallons per minute were required.

For broadcasting at this power, a special license was issued to the General Electric Co., by the Federal Radio Commission. Results of the operation of this station demonstrated that this high power was very effective in overcoming disturbances at considerable distances from the transmitter and the latter covered approximately twice the area reached by the 30-kw. set and gave equally satisfactory reception over the increased range.

The unsatisfactory and confusing situation in regard to broadcasting that existed in 1926 (See *Radio Broadcasting, YEAR BOOK, 1926*) was put into a far more stable condition by the enactment of a law by Congress that created a Federal Radio Commission of five members, effective Feb. 23, 1927. This commission was vested with authority to license broadcasting stations for one year; to determine to whom licenses shall be granted; and to fix wave lengths, power and hours of operation. The general powers of the commission were to be transferred to the Secretary of Commerce from and after one year after its first meeting, which was held Mar. 15, 1927; the Commission, however, was to retain authority over certain controversial matters that might be referred to it. Effective Feb. 26, 1927, the radio service was separated from the Bureau of Navigation, owing to the vast extension of radio in such great variety of directions as broadcasting, photographic transmission, etc.

The International Radio Telegraph Conference held in Washington, D. C., in October, 1927, was one of the outstanding events of the year, bringing together, as it did, the representatives of 80 different governments, who worked together for almost two months in harmony and were able to reach satisfactory conclusions upon highly technical matters. An important feature of the conference was the recognition of amateurs as radio workers deserving of official recognition in the development of this new art.

It was estimated by the Department of Commerce that 18,000,000 radio receiving sets were in use throughout the world providing reception facilities for about 90,000,000 people; but as this number represented only a small proportion of populations existing in zones of constant reception, it was considered that many millions more radio receiving sets could be sold in different parts of the world without reaching the "saturation point."

There was an increasing employment of radio for controlling various apparatus at distant points. In the City of Glens Falls, N. Y., an ingenious system of control was developed by engineers of the General Electric Co. for switching on and off the street lights, which were operated by radio impulse directed by carrier current over wires to the switch operating mechanism.

An interesting development that gave promise of wide application to long freight trains was given a series of tests by the General Electric Co. engineers on the New York Central R. R. by which it was possible to operate a radio telephone between a station and the locomotive cab. The frequency employed was between 2300 and 2750 kilocycles and it was found necessary to use a power of 50 watts delivered to the antenna.

Photo and radio transmission of pictures continued

to be an important feature of news service and the quality and distinctness of the illustrations transmitted showed marked improvement over the earlier work of this kind. An important development was the continuance of research work in what was styled "television," or the simultaneous transmission of a picture and the voice of the speaker in the picture. Successful experiments were reported.

RADIO-ACTIVITY. See *CEPHALOPODS*.

RADIO AND AGRICULTURE. See *AGRICULTURE, U. S. DEPARTMENT OF*.

RADIO FOG SIGNALS. See *LIGHTHOUSES*.

RADIO TELEGRAPHY AND TELEPHONY. The outstanding event of the year was the inauguration, on Jan. 27, 1927, of trans-Atlantic telephony between New York and London on a commercial basis. The success and reliability of this service soon led to its extension to include all stations of the Bell System, and somewhat later, all large centres of telephone traffic in Great Britain. Toward the close of the year, it was possible to link up many of the large cities of Europe in such manner as to take advantage of the radio telephone with North America. Owing to difference in time between London and New York, it was not considered practicable to give a 24-hour service; furthermore, as was to be expected, communication was not invariably satisfactory at all hours; nevertheless, it was reported that an encouraging amount of traffic was obtained and that the use of this new means of rapid communication was on the increase.

By reference to the *YEAR BOOK* for 1926, it will be seen that on each side of the Atlantic there were separate sending and receiving stations, the former being connected with any wire telephone circuit desired, and the latter delivering its amplified impulses to similar land lines. The apparatus was so arranged that, when no one was speaking, the transmitting voice paths were blocked both at New York and London, but the receiving paths were open. When, for instance, a person in New York spoke, his voice currents acted so as to block off his receiving path and allow his voice to go out. When he had finished talking, his apparatus was automatically restored to receiving condition and the person in London, by means of similar apparatus, was then able to speak.

It was expected that early in 1928, the telephonic apparatus being installed would enable radio-telephonic communication to be established between Cuba and Belgium; thus affording another means of speech transmission between America and Europe. The further development of trunk lines between the large cities of the latter continent was continued and was attracting considerable patronage from the public.

RADIUM. Through ownership of deposits of radium and uranium ores in Belgian Congo the Union Minière du Haut Katanga continued in control of the world radium market, and it was not considered profitable to work the uranium deposits in southwest Colorado and southeast Utah, except for limited sales. The Belgian company referred to was producing for markets, annually, through its radium plant in Belgium, operated by a subsidiary, about 20 grams of radium a year, yielding at about \$70,000 a gram. Consequently, it did not produce any radium in 1926, as the breeding plant was shut down for enlargement and improvements. It

mining was continued and 22 short tons of pitchblende, carrying 50 per cent of U_3O_8 , was produced. The plant when completed was expected to have a yearly capacity of six grams and the output for 1927 was estimated at 3 grams. In Portugal, radium mines and concentrating works from which a certain amount of radium was produced were operating in 1927. The American production in 1927, as in 1926, was sold to the companies making radioactive drinking water, salves, complexion preparations, and pads for rheumatic and other ailments. No radium was known to have been isolated from ore mined or shipped during the year 1926 but one company produced a small amount in finishing work at its reduction plant. The yearly purchases of radium were not more than 25 grams and the demand seemed to be restricted. A further consideration was the fact that when more than a few grams of radium were stored in any one place, there was the danger that persons in the vicinity might be injured by escaping gamma rays. The U. S. Bureau of Mines estimated the world's total production at 560 grams, or approximately 1.1 avoirdupois pounds, of which the United States had furnished 250 grams; Belgian Congo, 180 grams; Czechoslovakia, 42 grams; Portugal, 15 grams; Madagascar, 8 grams; Russia (Fergana), 6 grams; Cornwall, 4 grams; and South Australia, 1 gram. In 1926 the United States imported radium salts and radio-active substances valued at \$549,459; in 1927 imports were valued at \$393,662.

RAILROAD LABOR ACT. See LABOR ARBITRATION AND CONCILIATION.

RAILWAY ACCIDENTS. During 1926 the number of persons killed in railway accidents in the United States was 7090, as compared with 6766 in 1925, while the number injured was 130,235, as compared with 137,435 in 1925, according to the report contained in *Accident Bulletin No. 95*, issued by the Interstate Commerce Commission, in 1927. Of the total number killed in train accidents, 360, and of those injured, 3916, there were 190 railroad employees killed while on duty and 1589 injured. The total number of accidents, from collision, derailment or other causes, was 21,077, and these resulted in damage to property totaling \$22,185,306. It was reported that of the 234,280 highway crossings on the railroads of the United States, Dec. 31, 1926, 206,433 were unprotected.

RAILWAY ACCIDENTS BY GROUPS

Group of accidents	Year ended Dec. 31, 1926	
	Number of accidents	Number of casualties
Train accidents	21,077	Killed 360 Injured 3,916
Train-service accidents	48,504	6,829 45,788
Non-train accidents ..	(*)	401 80,586

Group of accidents	Year ended Dec. 31, 1925	
	Number of accidents	Number of casualties
Train accidents	20,785	Killed 418 Injured 8,912
Train-service accidents	46,754	5,946 44,081
Non-train accidents ..	(*)	402 89,442
Total	(*)	6,766 137,435

* No data available.

The annual report of the chief inspector of the Bureau of Locomotive Inspection of the Interstate Commerce Commission for the fiscal year ending June 30, 1927, shows that the number of accidents in connection with locomotives had

decreased by 14.9 per cent from the previous year. The number of injuries had decreased by 21.6 per cent but there was an increase of 27.3 per cent in the number of persons killed. The figures for 1923 showed that 72 persons were killed and 1560 were injured as a result of the failure of some part of the locomotive, while in 1927 the corresponding figures were: killed 28, injured 57.

SAFETY ON BRITISH RAILROADS. In 1927 there were 26 passengers killed in train accidents on British railroads, the largest total since 1906. These fatalities resulted from three accidents, two collisions and one derailment taking place.

The *Railway Gazette* of London, referring to the safety record and making comparison of the years for the total number of collisions and derailments which proved fatal to passengers, stated that there had been a total of 84 in the present century, or a fraction over three each year. In 1926 there were 13 killed in train accidents, but for the 10 years prior to 1926 the total number of passengers killed in train accidents on British railroads was 78, or an average of less than eight yearly.

RAILWAYS. In the United States the Interstate Commerce Commission both in its orders, and in its attitude toward consolidation and toward valuation and the recapture clause, played a predominating part in the development of the railways in 1927. Of course the operation of the roads, which since Mar. 1, 1920, had been under private management, went on in an orderly development only indirectly affected by the policy of the Interstate Commerce Commission, but the whole broad question of the trend of economies in railway matters was governed by the attitude of the Interstate Commerce Commission.

In the Transportation Act of 1920 it was provided that the Interstate Commerce Commission having had made a physical valuation of the railways, the rate of return on the capital invested in the railways as a whole, or for sections of the country as a whole, was to be based on this valuation. This valuation was to be fixed by the Interstate Commerce Commission taking into consideration among other things the cost of reproduction of the railroads new, and Congress left to the discretion of the Commission the manner in which the valuation should be taken. The Commission took Jan. 1, 1917, as the date of valuation and, to get a present value, added to the valuation of that date the capital expenditures; that is, additions and betterments, under the Commission's technical accounting rules, which had been made since Jan. 1, 1917. Valuation hearings had been going on for a long time, and throughout this period the Commission had considered itself as the counsel for the people rather than a judicial and impartial judge. The result has been that from the minutest detail to the largest policy the Commission's valuation engineers have striven to make the "cost of reproduction" figure for each railroad as low as possible. On the other hand, the representatives of the owners of the railroads or the railroad managements have striven to give as high a valuation to their properties as possible.

One question covering a broad interpretation of the intent of the valuation act and involving a question comparable to that raised between Socialism and capitalistic government, was the question of what scale of prices for railroad materials should be adopted—a pre-war schedule

or present prices, which in some cases were 100 per cent or more higher than the pre-war prices. The Interstate Commerce Commission in its tentative valuation of railway properties had used the prices of 1914 as a basis for the "cost of reproduction new" of a railway property.

A tentative valuation is a valuation made by the Commission and its engineers and served upon the railroad company with notice that if the railroad objects to anything in the method used or in the results arrived at, or in the facts presented, it shall present its argument to the Commission before a certain date and before the Commission passes upon the final figure to be used to determine the valuation. The Commission fixes a final value—for sake of illustration we will say \$100,000,000—and in accordance with the Transportation Act the railroad company is permitted to retain annually for distribution to its security holders 6 per cent of this valuation, if it earns that much. That is, in the illustration \$6,000,000, which must cover all bond interest and other interest, borrowed money and all dividends to stockholders. To take an extreme case, if pre-war prices gave a valuation of \$100,000,000 and present prices would give a valuation of \$200,000,000 the greatest amount of earnings which security holders of the railroads could retain would in the first instance be \$6,000,000 and in the second instance \$12,000,000, so that every one, including the Commission itself, recognizes the tremendous importance of the basis used by the Commission in making its valuation, assuming always that the Supreme Court upholds the so-called recapture clause of the Transportation Act.

The Interstate Commerce Commission and its legal department agreed with the railways upon making a comparatively simple case of valuation the test of this most important fundamental question. It therefore used the valuation of the St. Louis & O'Fallon, a short railroad of a few miles, earning considerably over 6 per cent on the tentative valuation, using 1914 prices as a basis in the test case. The Commission in its decision finding that the St. Louis & O'Fallon Railroad owed the government a comparatively large sum for excess earnings during the period Jan. 1, 1917, to Dec. 31, 1926, stated in its finding that, while the amount involved was in this case a few hundred thousand dollars, the principle used in making the valuation applied to all the railroads of the United States. In deciding this case therefore the sum taken from the railway security owner represented a great many million dollars and was of the utmost importance. Thus, using the O'Fallon case avowedly as a test case, the Commission found that the railroad company owed the government a sum which represented excess earnings above 6 per cent on a value where unit prices of materials were on the basis of 1914.

The New York stock market apparently almost entirely disregarded this decision. The stock of a road such as the Norfolk & Western or New York Central, which, if valued in accordance with the principles used by the Interstate Commerce Commission in the St. Louis & O'Fallon case, would owe the government huge sums of money and would presumably be limited as to dividends in the future, sold at prices that could only be justified by present dividends, and prospects for an increase in dividends in the future dependent on the earning power of the

property without the recapture of any part of the earnings by the government.

Notwithstanding the action of the Stock Exchange, or at least public opinion as expressed in Stock Exchange prices, bankers, in making advances to railroads either through a loan covered by a bond issue or the purchase of stock, had undoubtedly continually in mind the possible effect of the St. Louis & O'Fallon decision.

The Transportation Act as passed Feb. 28, 1920, and amended June 7, 1922, provides that the Commission "shall investigate and report the value of all property owned or used by every common carrier subject to the provisions of the Act."

The Transportation Act of 1920 provides that "if any carrier receives for any year a net railway operating income [which means income after the payment of operating expenses, taxes and rentals but before deducting interest on borrowed money] in excess of 6 per cent of the value of the railway property, one-half the excess shall be placed in a reserve fund established and maintained by such carrier, and the remaining half shall, within the first four months following the close of the period for which such computation is made, be recoverable and paid to the Commission for the purpose of establishing and maintaining a general railroad contingent fund."

CONSOLIDATIONS. With the question of valuation and of earnings which may be retained dependent on the United States Supreme Court's interpretation of a number of things, including the authority of the Commission to collect excess income, its method of valuation and, more fundamental than all, the right of the Congress to pass a law authorizing the collection of excess earnings still in uncertainty, some private attempts were made to carry out in part the intention of the Transportation Act in providing for consolidation of railroads into a limited number of systems. The Transportation Act provides that such consolidation would be in accordance with the plans laid down by the Interstate Commerce Commission, but while a tentative plan was made by the Commission, after a report by the Commission's expert, Prof. W. Z. Ripley of Harvard University, the Commission refused to indicate even the outlines of a final plan and refused to sanction the consolidations even by stock purchase to give control of one road by another. The Kansas City Southern Railway Company asked the Interstate Commerce Commission to sanction the purchase of control, directly or indirectly, of the stock of the St. Louis-Southwestern Railway Company and the Missouri-Kansas-Texas Railway Company, but this sanction was denied by a majority of the Commission in a report which gave a long list of convincing reasons why the Commission should not give its sanction to the operation of the three roads under unified control and ended by denying such sanction. Thus, no progress was made toward the consolidation, either under orders of the Commission or under private initiative of the separate railroad companies, into a limited number of railway systems as contemplated by the Act of 1920.

The fact that prices of railroad securities as reflected on the New York Stock Exchange were still high as compared with the prices of foreign government securities and industrial corporation securities, does not change the fact that the In-

terstate Commerce Commission during the year 1927 showed a decided tendency, so far as it was upheld by the courts, to regulate railways in the interests of the general public rather than that of the owners of railroad securities, and in the interests of certain liberal economists Socialistic, upheld by the Commissioners individually.

FINANCIAL RESULTS. In the calendar year 1927 the total operating revenue of the railroads amounted to \$4,225,090,000, which was less by \$224,900,000 or 5.3 per cent, than total operating revenues in 1926. In part this decrease in earnings was offset by a decrease in expenses, but net railway operating income, from which interest on borrowed money and return on capital invested in railroad securities must be paid, amounted to approximately \$1,115,000,000, or about \$117,000,000, or 9.5 per cent less, than 1926. An analysis of this decrease in earnings shows that the receipts per ton mile in 1927 were 1.075 cents as against 1.081 cents in 1926 and the receipts per passenger mile were 2.00 cents in 1927 as against 2.0361 cents in 1926. There was very little change in the proportion of the various classes of commodities carried to total tonnage freight, the principal changes being that the tonnage of coal in 1927 made up 17.81 per cent only of total tonnage of freight as compared with 18.62 per cent in 1926, and the tonnage of merchandise in 1927 made up 37.52 per cent in 1927 as against 36.36 per cent of the total tonnage of freight in 1926. In other words there was a decrease in the proportion of freight carrying a low ton-mile rate and an increase in the proportion of freight carrying a high ton-mile rate, but, notwithstanding this, there was a decrease on the average in the receipts per ton-mile of freight.

In 1927 the report to the Interstate Commerce Commission showed that in September, 1927, the average net ton-miles per train hour was 9967, the highest for any month in the history of American railroads, and, comparing with 9865 ton-miles per train hour carried in August 1926, the highest previous average for any one month.

Another index of railroad efficiency is the number of miles made on an average by freight cars during the month. In 1927 the average for the month of October was 34.7 miles per day and in the same month in 1926 the number was 34.3, and the average in 1922 to 1926 inclusive for October was 30.9 miles per car per day.

NEW CONSTRUCTION. The total number of miles of first track built in 1927 was, according to the *Railway Age* compilation, 778.76 miles as against 1004.72 miles of new first track built in 1926. In Canada the new first track built in 1927 was 309.67 miles and 334.90 in 1926. The *Railway Age*, from which these figures are taken, has for a number of years kept a uniform compilation of new mileage built. While the figure of new mileage built for 1927 was much smaller than that for 1926, it was larger than the figure for any other year since 1917. The total number of second-track miles built in 1927 was 446.08 and in 1926, 472.53.

The total mileage of railroad abandoned and taken up in 1927 in the United States was 202.42 miles and the mileage of line abandoned but not taken up was 79.55 miles. In Canada 39.33 miles were abandoned and taken up and 15.64 miles were abandoned but not taken up.

NEW RAILWAY EQUIPMENT ORDERED AND BUILT. Again according to the compilation made by the *Railway Age* the total number of locomotives ordered in 1927 was 734 as against 1301 in 1926. This was for domestic use only. Including the locomotives from American builders for use in Canada and for export to other countries, the total number was 846 in 1927 and 1542 in 1926. As contrasted with the number ordered, the number actually built, including the output of shops in Canada and locomotives built in railroad company shops, in 1927, was 1176 as against 1770 in 1926.

The number of freight cars ordered in 1927 was 74,785, which included the cars ordered in America for use in Canada and cars ordered for export. The comparable figure for 1926 was 70,495. For domestic use only the freight cars ordered in 1927 totaled 72,006 and in 1926, 67,029. There was built a total of 64,477 cars in American shops for both domestic and foreign use and in Canadian shops 2851. Thus, in 1927 the total built in the United States was 64,477 as against 91,633 in 1926, and in Canada 2851 as against 1645.

The number of passenger cars ordered in 1927 for domestic, Canadian and export use was 1803 as against 2162 ordered in 1926. Of those ordered in 1927, 1612 were for domestic use and in 1926, 1868 for domestic use. The total number of passenger cars built in 1927 was 1835 and in 1926, 2286. In Canada in 1927 the total built was 126 and in 1926, 285.

The Baltimore & Ohio Railroad Company ordered 3000 70-ton steel hopper cars, 1000 of which cost \$2313 each and 2000 of which cost \$2294 each. The Chicago & North Western also ordered some 70-ton steel hoppers for which it paid \$2516 each. A large order for 40-ton steel underframe box cars was placed by the Pere Marquette and the price paid was \$2201 per car. Another road, the Baltimore & Ohio, placed a large order for box cars with a capacity of 50 tons each. They were of steel and varied in price from \$1856 to \$1934. Passenger cars of course show a large variation in price, particularly because of the difference in interior decoration required by different conditions. For instance, the Chicago, Rock Island & Pacific placed an order for coaches which were to be 74½ feet long and cost \$28,634. The Mobile & Ohio placed an order for coaches which were to be 69 feet long and cost from \$25,575 to \$28,100 each, while the Southern Pacific ordered coaches to be 80½ feet long and which varied in price from \$27,866 to \$33,171.

There was a wide variation in price of locomotives ordered in 1927 due to differences in type, weight, equipment, etc. Thus, the Erie ordered twenty-five locomotives weighing 143,000 lb. each and costing \$100,200 each, while the same road ordered 30 switching locomotives weighing 230,210 lbs. each and costing \$55,800 each.

The *Railway Age* commenting on the types of new locomotives being developed on American railroads called attention to the use of four-wheel trailers for locomotives, and the tendency toward a more general use of this wheel arrangement on locomotives, which was marked in 1927. The *Railway Age* says "the primary object of the four-wheel trailer truck is to secure larger boiler capacity and better boiler proportion. A larger boiler capacity means more horse power

and more horse power means the maintenance of existing schedules with heavier trains in passenger service, and the hauling of heavier trains or increases in speed, or combinations of both of these factors in the case of freight train service."

ELECTRIC TRACTION. The new electrification projects announced in 1927 included electrification of about 50 miles by the Reading Company on its lines in the Philadelphia district, the extension of the Pennsylvania Railroad's electrification of lines in the Philadelphia district, the electrification of the west side yards of the New York Central in New York City, the electrification of the Great Northern between Cascade Tunnel and Skykomish, Washington, and the completion of the Chicago, Milwaukee & St. Paul electrification of its entrance into Seattle, Washington. See RAILWAYS, ELECTRIC.

RECEIVERSHIPS. The only roads of any consequence which went into receivership in 1927 were the Central of Vermont with 493 miles of line and approximately \$23,481,000 of funded debt and \$3,000,000 of stock, and the Missouri & North Arkansas with 365 miles of line, \$5,000,000 of funded debt and \$3,000,000 of stock. The total mileage of railroads placed in the hands of receivers in 1927 was 924.

The Chicago, Milwaukee & St. Paul with 11,205 miles of line operated, of which over 10,000 were owned, went into the hands of receivers in March, 1925, and it was announced that the receivership would be short and the reorganization plans quickly carried out. The Interstate Commerce Commission carried on at intervals during 1927 an investigation of the circumstances surrounding the receivership of the Chicago, Milwaukee & St. Paul, and although the district court approved of the sale of the railroad property of the old Chicago, Milwaukee & St. Paul to the proposed new company, the Chicago, Milwaukee, St. Paul & Pacific, nevertheless the new company had not during 1927 taken over the operation of the railroad and it was still being operated by representatives of the courts.

DIVIDEND CHANGES. During the very prosperous year 1926 a number of roads were earning sufficient to increase the rate of dividend on their stocks and rumors of increases were widespread. During 1927 the New York Central, effective August 1, increased the annual rate on the stock—there is only one class—from 7 per cent annually to 8 per cent, and the Southern Railway, which began its initial dividends at the rate of 5 per cent on its common stock in 1924 and increased this rate, effective Feb. 1, 1926, to 7 per cent, announced that on Feb. 1, 1928, a quarterly dividend of 2 per cent would be paid on the common, which places this stock on an 8 per cent annual basis.

NEW RAILROAD SECURITIES ISSUED. The most important single issue of securities from the point of size, was the issue by the Baltimore & Ohio of \$63,242,500 common stock, offered to holders of preferred and common stock to the extent of 30 per cent of their holdings at \$107.50 per share, and the issue of \$49,056,700 7 per cent cumulative preferred stock by the New York, New Haven & Hartford, offered at \$100 per share to stockholders of record Aug. 29, 1927, on the basis of 1 to 4 and to the holders of convertible debenture bonds at the ratio of one share of new preferred to each \$400 par

value of common stock or convertible debentures held. The New York Central offered \$38,325,000 new common stock to its stockholders as of record Aug. 10, 1927, at \$100 per share, on the basis of 10 per cent of their holdings of stock. These issues of stock are mentioned before the issues of bonds sold to refund maturing bonds because of the great significance that railways had sufficiently good credit to sell their stock rather than to borrow money through the issue of bonds.

Of the bond issues, an issue of \$95,000,000 Missouri Pacific First and Refunding, Series F, 5 per cent bonds was made and offered to the public at par. These bonds mature in 1977. The New York, New Haven & Hartford in addition to selling its preferred stock, sold \$31,000,000, 4½ per cent bonds due 1937, offered to the public at 91¼, yielding 5 per cent to maturity. In addition to the bond and stock issues sold there was a considerable volume of equipment trust issues sold. The Interstate Commerce Commission announced that it would require competitive bidding for issues of equipment trust certificates, and at least in theory this system was used during 1927. Since, however, competitive bidding did not necessarily mean that the issue should be awarded to the bidder who offered the lowest price for money, that is, would pay the highest price for the certificates, it meant that at least during 1927 the Commission recognized that the best bid for equipment trust certificates as for other securities might be a slightly higher bid by bankers affiliated with the road than by other bankers who during a time of prosperity might bid a low price for equipment trusts, but could not be counted upon during a period of poor security markets to make any bid whatsoever for a road's securities when money was needed imperatively for refunding or for other purposes.

John H. Dunn, signal editor of the *Railway Age*, in an article commenting on signal construction in 1928 says:

A new high record was established in 1927 for the installation of signaling facilities in the United States and Canada. Automatic signals were completed on 5127 miles of road, 142 interlocking plants were built and 2074 automatic highway crossing signals were installed, which, with remote control layouts, automatic interlockings and other apparatus, represented a volume of signaling equipment greater than that installed in 1926, which was the previous peak year of history.

The outstanding development of the year was the placing in service of the first complete installation of the centralized dispatching system on the Ohio division of the New York Central, as described in the *Railway Age* of August 20. This installation represents the accomplishment of the idea of operating trains by signal indication without written train orders or operators at intermediate stations, all switches and signals being power-operated and under the control of the dispatcher at a central point. While much of this control equipment is a radical departure from former practice, the system is a natural outgrowth of the extension of power interlocking and signals controlled from towers or stations. No mechanical locking is provided between the levers in the machine on this dispatching system, the locking being accomplished by relays and circuits, an idea discussed with reference to interlocking plants, but accomplished first on this installation. The Central of Georgia also installed a unique system of train direction on 24 miles of single track during the year, on which train movements are directed by signal indication under the control of operators. The Pere Marquette has under construction a system of centralized dispatching on 20 miles of single track.

The installation of automatic train control in compliance with the two orders of the Interstate Commerce Commission has been completed with the exception of a few details on four roads. The important development in this field during 1927 was the extensive installation of the new code system of continuous control. The

thought that the train control orders of the commission would reduce the volume of automatic signal construction decidedly has proved to be ill-founded, as is demonstrated by the large signaling programs of the past two years.

In 1927 the Interstate Commerce Commission reported that the total mileage of track which had not been protected heretofore by automatic block signals, but which during the year was given automatic block signal control, was 5127 miles. This compares with 4992 miles, the corresponding figure for 1926.

Besides the installation of block signals which is intended primarily to prevent collisions between trains on the same track, there was a large amount of work done on highway crossing protection. In 1927, 2135 automatic railway crossing signals were installed as compared with 1560 in 1926. As indicative of what the trend of thought among railway signal engineers has been, it is interesting to note that of the 2135 automatic highway crossing signals established in 1927 there were 733 of the wigwag type and 1412 of the flash light type. In cities, in many instances, the railroads have installed at street crossings the colored light signals in accordance with the system used at cross streets by the cities themselves. One other development has been a new type of crossing gate adaptable for electric operation with automatic control by track circuit, which was tested out during 1927 in Chicago.

In addition to the highway protection there were 142 interlocking plants installed, of which 31 were automatic interlocking, at railroad crossings, which make it as nearly as possible safe for one track to cross another railroad track.

Another development was the installation of desk levers so that a distance could be controlled from a tower by the signal operator. The levers involved in this installation in 1927 totaled 2480.

A device which was tried out in 1927 dealing both with economy in operation and with the safety of employees was a device for retarding cars in classification yards. This device permits the retarding of a car being switched by gravity from one track to another, by a mechanical device controlled in a signal tower of the yard. A large number of accidents to railroad employees is occasioned by a car running at too high a speed when being switched into a train. Too slow a speed makes for uneconomical switching of cars while too high a speed endangers the lives or safety of the men engaged in doing the switching. It is hoped that by the use of the new device for retarding cars switching will be speeded up as a whole while accidents due to careless switching will in large part be eliminated.

Prior to 1927 the Interstate Commerce Commission had ordered certain railroads to install automatic train control devices on one or more divisions of their road. In 1927, four roads made extensive installation of train control devices beyond the territories specified by orders of the Commission. See RAILWAY ACCIDENTS, and paragraphs on *Railways* or *Transportation* under the different States and countries.

RAILWAYS, ELECTRIC. The year was notable for the completion of the Illinois Central electrification at Chicago; the opening of a ten-mile link into Seattle, Wash., on the Chicago, Milwaukee & St. Paul giving this road a total of 655 miles of electrically operated line into

Seattle and Tacoma; and the almost completed newly located line of the Great Northern in the Cascade Mountains. An unusually powerful storage battery locomotive with gasoline-electric auxiliary was put in switching service at Chicago by the Chicago & Northwestern. Incorporating features of both storage battery and electric drive, this locomotive proved very satisfactory in the particular kind of work for which it was designed. Power could be supplied from either the battery or the gas-electric unit. If the battery were inadequate to supply unusual demands for power, the gas engine-driven generator was so connected as to supply energy to the motors. When running on battery alone, the engine set charged the batteries. The locomotive was of the steeple cab type, with two four-wheel trucks, and weighed 118½ tons.

The Illinois Central improvement at Chicago included electric operation of suburban traffic from Chicago to Matteson, 28 miles; to South Chicago on a 4.8-mile branch and to Blue Island over another line 4 miles long. At the close of the year, more than 90,000 suburban passengers were being handled every week day in 418 electric trains. Improvement in the running time of trains was accomplished, to the extent of from 15 to 30 per cent. The system was 1500-volt, direct current from overhead conductors, and the motor cars, each of which seated 84 passengers, were equipped with four 250-horse power motors.

The electric system installed for suburban traffic at Melbourne, Australia, in 1926, was reported to be so satisfactory that the Government of New South Wales decided to undertake the electrification of the suburban lines around Sydney.

Motor-generator locomotives built for the New York, New Haven & Hartford in 1926 were highly successful and seven more were under construction during 1927. (See YEAR BOOK, 1926, *Railways, Electric*.) There were also under construction several motor-generator locomotives for the Great Northern Railway, for operation on 11,000-volt, single-phase current, which is supplied to the traction motors at 1500 volts, direct current. These engines had two three-axle trucks, each of which was equipped with three 750/1500-volt motors. The 11,000-volt power from the overhead trolley was transformed down to 2300 volts on the locomotive for the operation of a single-phase motor, which in turn operated two 1250-kw. direct current generators furnishing energy to the driving motors. These locomotives were intended for use on an 80-mile stretch between Skykomish and Wenatchee, Wash.

The Paulista Railway, in Brazil, ordered four 115-ton, 3000-volt, freight locomotives for freight service. Several of the same type already were in use on that line.

For special localities, as in and near large cities, the Diesel-electric locomotive received considerable serious attention. One of these was in service on the New York Central, in New York City and another of 600 horse power, weighing 60 tons, was at work on the Long Island R. R. Both of these were in switching service. A Diesel-electric motor car was built for the Canadian Pacific having a 300-h.p., 800-rpm. engine that weighed only 6900 lbs.; a remarkably light engine. The Erie also had two Diesel-electrics, one in yard service at Akron, Ohio, and

the other geared higher, for local passenger service.

An innovation in interurban railway cars was noted as the use of a worm-drive transmission between motors and axles, as well as the use of roller bearings throughout. See RAILWAYS.

RAND, CHARLES FREDERIC. An American mining engineer, died at West Orange, N. J., on June 21. He was born in Canaan, Maine, on Oct. 21, 1856, and was educated in the public schools at Portland, Me. He began his business career in 1880 by operating an iron ore mine in the Lake Superior district. From 1891 to 1896 he was manager and treasurer of the Rockefeller mining properties in Washington. In 1902 he organized the Federal Mining and Smelting Company and consolidated the lead mines of the Coeur d'Alene district of Idaho. He discovered large soft iron ore deposits on the north coast of Cuba, developed manganese mines and built the Barraco Railroad there between 1894 and 1920. He was president of the American Institute of Mining and Metallurgical Engineers, 1913-14.

RANDOLPH, HAROLD. American pianist and teacher, died at Northeast Harbor, Me., July 6. He was born at Richmond, Va., Oct. 31, 1861. Having completed his studies at the Peabody Conservatory in Baltimore, Md., under Carl Faelten (piano) and Asger Hamerik (composition), he began his career as a concert pianist in 1885. At the same time he became organist at the Roman Catholic Cathedral in Baltimore, remaining there till 1890, and from 1890 to 1906 he was organist at the Emanuel P. E. Church. In 1898 he succeeded Hamerik as director of the Peabody Conservatory; under his administration it became one of the foremost music schools of the United States. The ever-increasing responsibilities of this position greatly lessened, although they did not entirely terminate, his appearances as a concert pianist.

RAPID TRANSIT. **NEW YORK SUBWAYS.** While little advance was made during the year towards solving the fundamental questions involved in the complex rapid transit situation in New York City, nevertheless a number of large contracts for extensions were let and there was considerable progress in construction. The Queensboro subway was completed at both ends, giving service between Times Square, Manhattan, and Flushing, the former terminal being ready for service at the end of the year. Rapid progress was made on the construction of the Eighth Avenue subway, while the Fifty-third Street tunnel, under the East River from Eighth Avenue to Long Island City, was under active construction, the contract price for the three sections of this work being around \$24,000,000. Work was started on the line from Church and Fulton Streets, Manhattan, to Cranberry Street, Furman and High Streets, Brooklyn, the latter project involving the expenditure of more than \$22,000,000. Late in the year a contract was let for the Nassau Street, Manhattan, loop. The Board of Transportation reported that the contracts awarded or bid for during the year 1927 were as follows:

City's new subway system	\$68,816,122.51
B. M. T. system	12,888,581.15
I. R. T. system	888,947.80
Miscellaneous contracts	191,030.05
Total	81,784,681.51

Considering the city's new subway system, contracts awarded in 1927 included sections along and under Fifty-third Street, East River and Welfare Island from Eighth Avenue, Manhattan, to Long Island City; Broadway from 173rd to 177th Street; Fulton Street and East River route from Park Place and Church Street in Manhattan to Jay and Nassau Streets in Brooklyn; Jay Street from Nassau to Wiloughby Street; Jackson Avenue, Long Island City, from Arch Street to Queens Street, and Forty-fourth Drive from Jackson Avenue to East Avenue; Manhattan Avenue, Newtown Creek, Vernon and Jackson Avenues from Freeman Street in Greenpoint to Arch Street in Long Island City.

These contracts and also actual construction or bids in hand for the city's new subway system, 35 in number, brought the total to 19.65 miles of subway lines and 68.06 miles of track, extending the length of Manhattan Island to the Long Island section of Queens and the Greenpoint and Heights section of Brooklyn.

Contracts were also placed for a storage yard at 207th Street and the Harlem River. Among the contracts awarded during the year was one with the New York Consolidated Railway Company, a subsidiary of the Brooklyn-Manhattan Transit Company of which \$10,458,034 was for the Nassau Street subway and \$1,311,922.85 was for the completion of the Fourteenth Street-Eastern subway to East New York, which was to be completed in the spring of 1928. The Board of Transportation also completed the lengthening of 40 B.M.T. stations at a cost of \$1,100,340. On the Interborough lines construction contracts totaling \$338,948.80 were awarded, of which \$228,888 was for the Corona-Flushing line.

During the year the Board of Transportation added a four-track subway for Fulton Street, Brooklyn, extending into Queens, and modified the proposed Livingston Street route and substituted a route in Schermerhorn Street from Court Street to Fulton Street to form a connection with the Brooklyn crosstown line and with the Jay Street, Cranberry Street, and Smith Street-Gowanus Canal line, the latter having been modified from a subway to a viaduct over the canal.

In the summer of 1927 the New York Port Authority organized a Suburban Transit Board, which included the Board of Transportation of New York, the various railroads with suburban traffic, the North Jersey Transit Commission, and the Westchester County Commission, to prepare a comprehensive suburban traffic plan for the metropolitan area of New York.

PHILADELPHIA SUBWAY. At the end of the year the new subway in Philadelphia which had been under construction for about three years was reaching completion so far as the work north of the City Hall on Broad Street was concerned. Contracts aggregating about \$25,000,000 were let during the year for work on South Broad Street; while a beginning was made of delivery of operating equipment, but no decision had been made as to the method of operation.

CINCINNATI. During 1927 a study of transportation system of the city of Cincinnati was undertaken in order to determine the best possible use of a subway which had been completed at a cost of \$6,100,000, with the object of bringing several interurban lines into the

centre of the system. Since this work had been done most of the local transportation lines had gone out of business, largely on account of the enormous development of automobile traffic, so that the city was left with an unused project on its hands. It was decided to utilize this subway which had been constructed in the bed of an old canal, and it was believed that about \$7,000,000 would be required for extensions to connect with street car lines and \$3,000,000 for equipment. It was proposed to lease the subway as built to a street railway company for operation and making a unified system that would take care of the city's traffic. While the subway itself was unused the ground obtained by roofing over the tunnel was being developed as boulevard and parking space.

LONDON. During the year a report was submitted by an advisory committee to the British Ministry of Transport stating that the effective relief of the congested traffic situation in London was possible only by a unit management and control, replacing a badly organized and competitive system of lines by a single comprehensive system and Board of Management, including the underground and other local railways, the tramways and omnibus undertakings. This would not involve public ownership but a definite system of organization where the officials of various companies would constitute the central Board of Management and would have a dual responsibility to the owners of their undertakings and to a superior authority. It was believed that with proper coordination there was sufficient traffic in London to provide a satisfactory return on the large amount of capital already invested but the committee also believed that the present competitive methods must be eliminated and various economies instituted, as well as certain new construction. The Committee was convinced that the unified transport agencies would provide the only permanent solution of the whole problem of London passenger transportation.

SYDNEY, NEW SOUTH WALES. The first part of the rapid transit electric railway system was opened in December, 1926, and included underground lines in the port district and surface lines connecting with the suburban railways and extending across the great cantilever bridge over the harbor to connect with lines in North Sydney. This work consists of the diversion of suburban traffic entering Sydney from the south by the eight-track city railway, which, running parallel to the main-line railway as far as the Central Terminal Station, would go underground to the Wynyard Station, from which four high-level tracks were planned to run across the new bridge, while two low-level tracks would loop around the business district and return to the Central local station. From Redfern, the round-trip route by the city loop is 5.5 miles, with 18 miles of track. During 1927 the section from Central to St. James was in operation. The entire project was of interest, as special solutions had been developed for various stations.

JAPAN. During the year plans for an extensive rapid transit system to relieve traffic conditions at Osaka, Japan, were discussed and a new system, somewhat over 33 miles in length, to cost 162,300,000 yen, was proposed, where 20 miles of the system would be elevated and the remaining part underground. The municipal authorities had sanctioned plans prepared by their engi-

neers, but no definite action had been recorded by the central government in Tokyo. It was estimated that about eight years would be required to complete the undertaking.

RATCHFORD, MICHAEL D. An American labor leader, died at Massillon, Ohio, December 12. Born in County Clare, Ireland in 1860 he went to the United States when a boy of 12 and soon went to work in a coal mine in Ohio, although he continued his schooling as best he could at night. He worked as a miner for more than 20 years before he assumed a position of leadership in the industry. In 1895 he was elected president of the Miners' Union in Ohio, and in the following year he was elected president of the United Mine Workers of America for a two-year term.

RAYON. World production of rayon in 1927, according to *Textile World* (New York), was estimated at 265,900,000 pounds, which was an increase of 46,000,000 pounds over the estimated production for 1926. In addition to the production of the United States, discussed at greater length below and which formed over one-third of the total, Italy produced over 37,000,000 lbs.; Great Britain over 36,000,000 lbs.; Germany, 33,500,000 lbs.; France, 19,800,000 lbs.; Belgium, 16,500,000 lbs.; Holland, 16,500,000 lbs.; Switzerland 9,000,000 lbs.; and Japan 9,000,000 lbs. It was evident that this fibre had firmly established itself and that the various products were accepted by consumers on their own merits and not merely as a substitute for other fabrics. There were constant improvements in the manufacture and treatment of the fibre, and new uses for it constantly were being found. Rayon was being combined with cotton, natural silk, wool, and linen, and the manufactured fabrics were used for clothing, for household furnishing, and for decorative purposes. The increased use of rayon has resulted in the introduction of new colors and designs in the textile industry and affords new qualities of durability.

The United States in 1927 produced 75,050,000 pounds of rayon including yarns of all types and grades, of which amount the Viscose and du Pont companies together accounted for 50,000,000 pounds. These two companies accounted for 75 per cent or 64,395,000 pounds of the total U. S. distribution of 84,671,000 pounds which included surplus stocks carried over from the previous year. Not only was the American production absorbed but also imports amounting to some 16,000,000 pounds. The following figures give the 1927 production of the leading plants in the United States:

Plant	1927
Viscose Co.	41,000,000
du Pont Rayon Co.	15,100,000
Tubize Artificial Silk Co.	7,500,000
Industrial Rayon Corp.	3,450,000
Celanese	3,500,000
Belamose	1,400,000
Delaware	250,000
Acme	500,000
Others	2,100,000
Total	75,050,000

Imports of rayon into the United States in 1927 totaled 16,211,160 pounds, valued at \$13,587,220, or an average of 83¾ cents per pound, which with duty added was equivalent to \$1.28¾, according to statistics issued by the U. S. Department of Commerce. The 1927 fig-

ures showed an increase of 60 per cent in volume and 50 per cent in value over the totals for 1926, and 847 per cent in volume and 492 per cent in value over 1924, the imports for the latter year being 1,711,987 pounds valued at \$2,204,558.

READ, MELBOURNE STUART An American educator died at Hamilton, N. Y. on April 4. Born in Berwick, Nova Scotia on Sept. 27, 1869, he was graduated from Acadia College in 1891, and from 1892 to 1895 was the Sage Fellow in philosophy at Cornell, receiving the Ph.D. degree in 1897. Dr. Read became associate professor of philosophy at Colgate in 1895 and professor and head of the department in 1900, serving until his death. He was acting president of the college from 1920 to 1921, and president pro-tem 1921 to 1922. His published works included *English Bibliography, Theory* (1902) and *Introductory Psychology* (1911).

RECLAMATION. The policy of the United States government to reclaim arid land had been pursued vigorously, but it had been found except in unusual cases that it was impossible to obtain repayment on the outlay and accordingly there was a tendency to abandon such work. In 1927, however, there was a resumption of this development and during the year two important projects were under consideration or in course of preparation in eastern Oregon; while the Echo Reservoir project for supplementary water supply to the Utah areas was well under way. The Oregon projects involved so extensive an outlay for the irrigation works that it seemed quite unlikely that the landholders would ever be able to repay the government for the capital outlay. During the year a number of tracts in the Southeastern States were examined as to their possibility for colonization once they had been reclaimed for agricultural purposes. It apparently was the policy of those most interested in this work to await activity by the Federal government in the form of suitable appropriation. The tendency seemed to be to hold that the United States government, having made a beginning with the irrigation of arid land, should also proceed to other sections where drainage would reclaim territory hitherto unsuitable for agriculture. See **SOILS**.

RÉCLUS, ARMAND. French explorer and author, died in Paris on January 10. Born in Paris in 1845, at an early age he entered the French navy. His name was closely linked with the early exploration of Central America. In 1878 when Bonaparte Wyse obtained the concession to build the Panama Canal he appointed Réclus to carry out the explorations and it was the line which Réclus traced that was later adopted for the canal. He wrote several books, the most notable of which were *The Interoceanic Canal* and *Panama and Darien*. He was a brother of Jacques Elisée Réclus, the famous geographer.

RED BANK. Battle of, see **Celebrations**.

RED CROSS, AMERICAN. An organization chartered by Act of Congress in June, 1900, and incorporated in January, 1905. Its purpose is to supply succor to sufferers from the evils of war, and likewise to furnish similar aid in time of peace to sufferers from disaster or from any widespread pestilence or famine. The society is a member of the League of Red Cross Societies, made up of similar societies in 54 nations. All powers of control, management, and administration are vested in a central committee, of eigh-

teen persons, six of whom are appointed by the President, six elected by the chapters, and six by the board of incorporators.

On June 30, 1927, there were 3527 chapters of the American Red Cross. Home service work for disabled veterans and their families was carried on by 2651 chapters, which spent \$1,769,000, while the national organization spent an additional \$1,161,223.86 for the same purpose. Home service to ex-service men and their families included assistance in filing death and disability claims for Federal and State benefits, such as compensation, bonus, etc., and social or financial aid while adjustment of claims was pending. Hospital service was conducted in 83 government hospitals, including those of the Veterans' Bureau, Army, Navy, and National Soldiers' Homes, and in 8 contract hospitals.

The year brought many opportunities to the Red Cross for rendering service, for it was a period of unprecedented disasters. There was an average of one disaster every five days and two were of unusual violence and magnitude. From mid-September to Christmas, 1926, the Red Cross was engaged in relief operations in Florida, following the most disastrous hurricane in the history of the country. Four months after that task was completed Red Cross relief machinery was in operation along the Mississippi River, along a "front" of 1000 miles which extended inland from 50 to 150 miles east and west. Eight states were affected and more than 600,000 depended upon Red Cross aid for their very sustenance. From April until June, 1927, while actively engaged in flood relief in the Mississippi Valley, the organization provided relief in 21 other disasters affecting 12 states, in one alone of which approximately 17,000 people were assisted. The report for the fiscal year showed that the Red Cross rendered aid in a total of 111 disasters, of which 91 were in the United States and 20 in foreign lands, the latter including: Bulgaria, Jugo-Slavia, Azores, Turks and Caicos Islands, Bimini Island, Dominican Republic, Haiti, Cuba, Mexico, Armenia, Albania, Japan, and the Grand Bahamas. Among the insular possessions of the United States, victims of disasters in the Philippines, Alaska, and Porto Rico were assisted, while assistance was also given to American refugees in China and Syria. In the case of only two disasters, the Florida hurricane and the Mississippi flood, did the Red Cross make a nation-wide appeal for funds. A total of \$8,216,893.31 was expended by national headquarters and by Red Cross chapters for disaster work in the United States during the fiscal year ended June 30, 1927. Nearly \$20,000,000 in addition was collected for relief in the two disasters mentioned. The society spent \$256,962.60 for assistance to victims of disasters in foreign lands.

The Nursing Service of the organization had 45,242 nurses enrolled as a reserve and a source of supply for the army, navy, Public Health Service, United States Veterans' Bureau, and for duty in emergencies, of whom 27,426 were active. In 1927, 60,850 students, 43,422 of them school students, were instructed in home hygiene and care of the sick, of whom 39,440 received certificates. At the close of the fiscal year there were 731 public health nurses supported entirely or in part by the Red Cross. They made 1,000,239 home visits, and inspected 910,349 school children. The Nutrition Service conducted 3736

classes and reached 131,426 school children with nutrition instruction.

The year marked the thirteenth anniversary of the establishment of the Life-Saving Service, in which 134,582 men, women, and children were enrolled; during the year 13,819 adults and 18,687 juniors passed the tests. Volunteer workers in chapters during the year made 175,481 garments, 2,057,912 surgical dressings, and completed more than 100,000 pages of Braille. About 250 chapters maintained motor corps services for disaster and other emergency uses. The Red Cross first aid instruction car was in continuous operation, visiting 120 cities, where 1019 meetings and demonstrations were held, with a total attendance of 190,751. Approximately 24,819 certificates were issued to those taking systematic courses of instruction in first aid. Welfare service was provided for families in communities where no other agency existed for such service, an average of 8586 families being aided each month.

On June 30, 1927, there were 5,822,757 children enrolled in the American Junior Red Cross. At the close of the membership year, August 31, the senior membership was 3,087,789. Revenues during the fiscal year were \$23,300,000, leaving a balance in the treasury of \$29,168,899.45, as against \$17,236,480.40 in 1926. The unobligated funds remaining in the treasury on June 30 totaled \$2,773,591.71 after \$16,945,837.45 had been budgeted and \$8,449,470.29 set aside for specified activities.

In virtue of his office, the President of the United States is president of the American Red Cross. Other officers in 1927 were: vice presidents, Robert W. de Forest and William H. Taft; chairman of the central committee, John Barton Payne; counselor, William D. Mitchell; treasurer, Charles S. Dewey; secretary, Mabel T. Boardman; vice chairman in charge of domestic operations, James L. Fieser; vice chairman in charge of insular and foreign operations, Ernest P. Bicknell. Work is centralized in three administrative divisions, one at the National Headquarters, in Washington, one in St. Louis, and the other in San Francisco.

REED COLLEGE. A coeducational, non-sectarian liberal college of arts and sciences at Portland, Oregon; founded in 1911. The enrollment for the autumn term of 1927 was 322, of whom 160 were women and 162 men, distributed as follows: freshmen, 135; sophomores, 76; juniors, 43; seniors, 36; graduate students, 2; special student, 1; new students with advanced standing, 20; old students returned, 11. The faculty numbered 30. The productive funds for the year ending Aug. 31, 1927, amounted to \$1,721,745.23, and the income for the year to \$86,558.28. The library contained 33,466 volumes. President, Norman Frank Coleman, LL.D.

REEVES, ALFRED GANDY. An American law teacher and author, died in Brooklyn, N. Y., on January 10. He was born in Millville, N. J., on Dec. 3, 1859, and was graduated from Princeton in 1884 as head of his class. In 1887, he graduated at Columbia Law School, again being head of his class. With two associates, Professors Chuse and Petty, in 1881 he established the New York Law School and for many years he taught there the law of real property, wills and administration of estates, trusts, etc. His principal published works, *Reeves' Cases on Wills* (1891) and *Reeves on Real Property* (1909), were widely read.

REFINING OF METALS. See **METALLURGY.**
REFORMED CHURCHES THROUGHOUT THE WORLD HOLDING THE PRESBYTERIAN SYSTEM, ALLIANCE OF. This organization was formed in London, England, in the year 1875 with the one great purpose, to encourage comity, cooperation, and efficiency in the accomplishment of Christian work. There are 106 churches connected with the Alliance, located on all the six continents. The members and adherents of the Presbyterian and Reformed Churches in the world number about 50,000,000, including those in the Evangelical Church in Germany, which has about 113,000. It was planned to hold the Thirteenth Council either in Canada or the United States. The president in 1927 was the Reverend Charles Merle d'Aubigne, D.D.; the general secretary was the Reverend W. H. Hamilton; and the American secretary was the Reverend Henry B. Master, D.D., whose offices were at 912 Witherspoon Building, Philadelphia, Pa.

REFORMED EPISCOPAL CHURCH. A denomination formed in December, 1873, by clergymen and laymen who had withdrawn from the Protestant Episcopal Church. It was the outcome of an intense discussion carried on over ritualistic tendencies. As indicated in its name, the denomination held that it supported the principles of the Anglican Church of the time of the Reformation, and of the Protestant Episcopal Church as organized after the American Revolution. Doctrine and polity, otherwise in general accord with those of the Protestant Church, were anti-sacerdotal. A General Council of the denomination meets triennially, and sat at Philadelphia, in May, 1927. Since the episcopate is regarded as ancient and desirable but not as existing of Divine right, bishops do not constitute a separate house in the General Council. The denomination maintains a theological seminary at Philadelphia, Pa., and issues from that city a periodical, the *Episcopal Recorder*. Statistics for 1927 were: churches, 86; ministers, 91; church members, 18,300; Sunday school enrollment, 16,600. Bishop Robert L. Rudolph of Philadelphia, was presiding bishop of the General Council.

REFUSE, MUNICIPAL. See **GARBAGE AND REFUSE DISPOSAL.**

REGIONAL PLANNING. See **CITY PLANNING.**

REID, THE REV. DR. GILBERT. American missionary, died at Shanghai, China, on September 30. He was born at Laurel, N. Y., Nov. 29, 1857, and graduated from Hamilton College, Clinton, N. Y., in 1879, and from Union Theological Seminary, New York City, in 1882. Ordained to the Presbyterian ministry in the latter year he went to Chefoo, China, as a missionary. Throughout his life, which was spent in China, he was a champion of the interests of the Chinese, and he had one of the most romantic careers in the Orient. He started the International Institute in China and was its first director. He was wounded in the Boxer siege in Peking in 1900, and while in Shantung on one occasion he was stoned and left for dead by a mob. In 1917, when editor of the *Peking Post*, because of his opposition to China's entering the World War he was deported by the American authorities at the request of the Chinese government. He was sent to Manila for a year and then returned to the United States. He was author of numerous books on Oriental questions and served for several

years as correspondent of *The London Times*, *The New York Herald-Tribune* and other well known papers.

REINDEER. See ALASKA.

RELATIVITY, THEORY OF. No significant new developments affecting the theory of relativity took place in 1927. Several of the experiments upon the results of which Einstein originally founded his theory were again repeated, with increased refinement; but, except in the case of Miller's repetition of the Michelson-Morley experiment at Cleveland, no appreciable effects due to the motion of the earth were found. The interpretation and significance of Miller's results are still uncertain; and repetitions of the same experiment by other investigators fail to show any effect.

St. John's investigations of solar spectrum wave-lengths have continued to result in the accumulation of strong evidence for the existence of the Einstein spectral displacement: Lines at the centre of the solar disk show more than the theoretical displacement at high levels, and less at low levels, probably because of Doppler effects due to descending currents at high levels and ascending currents at low levels such as are known to exist in the atmospheres of the sun and stars; at the limb, where the effect of radial currents would disappear, the displacements are nearly of the predicted amount.

The theory of relativity, however, has, since its inception, developed far beyond its original limits, and has become a powerful general method for investigating and coördinating physical phenomena; and, however its details may have to be modified to accord with future experimental results, its viewpoint and methods are permanent acquisitions of great value to mathematical physics.

RELIGIOUS DENOMINATIONS. See articles on the respective denominations.

REMENSNYDER, JUNIUS BENJAMIN. An American clergyman, and author, died in New York City on January 2. He was born at Stanton, Va., Feb. 24, 1843, and graduated from Pennsylvania College, Gettysburg, in 1861, and from its theological department in 1865. He served in the Union army in 1862 and 1863, and was ordained to the Lutheran ministry in 1865. After pastorates in Philadelphia and Savannah, he was called to New York in 1880, and for 42 years was pastor of St. James's Lutheran Church. At the time of his death he had been pastor emeritus for three years, retiring upon completion of 59 years in the ministry. Dr. Remensnyder originated the movement which united the Lutheran bodies in adopting a common service ritual in all American Lutheran churches. He was elected president of the General Synod in 1911. His published works include: *Heavenward* (1874); *Doom Eternal* (1880); *Luther* (1883); *Lutheran Manual* (1893); *Mysticism* (1908); *The Problem of Life* (1913); *What the World Owes Luther* (1918); *Shadows of Life* (1919).

REMSEN, IRA. American chemist and educator, former president of the Johns Hopkins University, died at Carmel, Cal., on March 4. Born in New York City on Feb. 10, 1846, he studied at the College of the City of New York and at the age of 19 was graduated with the degree of A.B. Two years later he obtained his M.D. degree from the College of Physicians and Surgeons of Columbia University. He then pursued chemical courses at Munich and Göttingen and in 1870 he received the degree Ph.D. from the latter university. He was professor of chemistry at Williams College, Mass., from 1872 until 1876, when upon the organization of the Johns Hopkins University he was made professor of chemistry in the new institution, with which he was prominently identified for the remainder of his life. He was professor of chemistry from 1876 to 1913, director of the chemical laboratory from 1876 to 1908, president of the university from 1901 to 1912, and thereafter president emeritus and professor emeritus. Dr. Remsen carried out a number of important investigations in both organic and inorganic chemistry, but these were mainly in the realms of pure science, as he would not commercialize his scientific work. The Society of Chemical Industry in 1904 conferred upon him its gold medal in recognition of his discovery of saccharin. *The American Chemical Journal* was founded by him in 1879, and despite the large amount of other work devolving upon him he edited the journal for more than 40 years. He served as president of the American Chemical Society in 1902, the American Association for the Advancement of Science in the same year, and was one of the few foreign members of the London Chemical Society. In September 1923 he received from the American Chemical Society the Priestley medal, awarded for distinguished services in chemistry. He received the degree of LL.D. from Columbia, Princeton, Yale, Harvard, Toronto, Pennsylvania State College and the University of Pittsburgh. His writings include *Principles of Theoretical Chemistry* (1876); *Introduction to the Study of Compounds of Carbon, or Organic Chemistry* (1885); *Introduction to the Study of Chemistry* (1887); *Elements of Chemistry* (1888); *Inorganic Chemistry* (1889); *A Laboratory Manual* (1889); *Chemical Experiments* (1895).

RENNETT, HUGO ALBERT. American educator, died at Washington, D. C., on December 31. He was born in Philadelphia, Pa., in 1858, and was graduated from the University of Pennsylvania in 1876. He held the chair of romance philology at the University of Pennsylvania from 1892, and was a member of the faculty for more than 40 years. He was the author or editor of many books on Spanish literature, and his collection of Spanish books, regarded as the most valuable private collection, was purchased by the University of Pennsylvania in April, 1927.

RENSSELAER POLYTECHNIC INSTITUTE. A non-sectarian institution for the technical training of men at Troy, N. Y.; founded in 1824. In 1927 there were 1422 students enrolled for the autumn term, distributed as follows; civil engineering, 438; mechanical engineering, 242; electrical engineering, 492; chemical engineering, 135; business administration, 41; pre-medical, 27; physics, 16; chemistry, 7; special students, 5; graduate students, 19. The teaching staff numbered 113, an increase of 7

over 1926. The productive funds amounted to \$4,400,000, and the income for the year to \$599,000. The total value of the property of the Institute, including market value of securities and value of buildings and equipment, was more than \$10,000,000. The gifts for endowment during the year amounted to \$136,700, and those for buildings to \$87,500. The library contained 18,365 bound volumes and 19,963 pamphlets. President, Palmer C. Ricketts, ED., LL.D.

REORGANIZED CHURCH OF JESUS CHRIST. See LATTER DAY SAINTS, REORGANIZED CHURCH OF JESUS CHRIST OF.

RESEARCH COUNCIL, NATIONAL. A co-operative organization of scientific men of America, interested in pure and applied science, including engineering and industry. It was established in 1916 by the National Academy of Sciences at the request of the President of the United States, for the purpose of coordinating the research facilities of the country for work on war problems involving scientific knowledge. By executive order it was reorganized in 1918 as a permanent body, its essential purpose being to promote scientific research and the application and dissemination of scientific knowledge for the benefit of the national strength and well-being. It maintains a close cooperation with governmental scientific bureaus and their activities, and has the formal recognition and co-operation of 75 major scientific and technical societies throughout the country, its membership being composed in large part of appointed representatives of these societies.

The activities of the Council are conducted by a series of major divisions, arranged in two groups. Each division has a chairman and from twenty to twenty-five members. One group comprises seven divisions of science and technology, representing physics, mathematics, and astronomy; chemistry and chemical technology; biology and agriculture; the medical sciences; psychology and anthropology; geology and geography; and engineering and industrial research. The other group consists of five divisions of general relations: state relations; educational relations; foreign relations; government relations; and research information. Among the larger undertakings of the Council during 1927 were: The maintenance of about 160 research fellowships in physics, chemistry, mathematics, the biological, and the medical sciences; work on the preparation and publication of International Critical Tables of Numerical Data in Physics, Chemistry, and Technology, of which two of the planned five volumes were issued during the year; the establishment, in cooperation with the American Petroleum Institute, of a Central Petroleum Institute which began a series of fundamental investigations in the physics, chemistry, and geology of petroleum, of which investigations about thirty were under way; medical problems of animal parasitology, especially ascariasis in children; scientific problems of sex; medico-legal problems; blood grouping; physical causes of deafness in children; problems in tropical agriculture and biology; state archeological surveys; fellowships in child development; seed germination; fatigue of metals; structural welding; highways research; chemistry of carbohydrates; problems of coastal subsidence and elevation; and others.

The financial support of the Council is derived, first, from a gift of \$5,000,000 from the Carnegie

Corporation of New York to the National Academy of Sciences, part of that sum to be devoted to the erection of a suitable building to house the Academy and Council, the income from the rest to support the work of the Council; and second, from other gifts from various sources, mostly made for the specific support of particular undertakings. These sources include the Rockefeller Foundation, General Education Board, International Education Board, Laura Spelman Rockefeller Memorial, Commonwealth Fund, and various individuals and industrial concerns. The Council maintains two regular series of publications; *Bulletins*, of which 62 had been issued up to the end of 1927, and the *Reprint and Circular Series*, of which 80 had appeared. It publishes, in addition, miscellaneous publications and its *Annual Report*.

The general administrative officers of the Council in 1927 were: Chairman, Gano Dunn; first vice chairman, Thomas H. Morgan; second vice chairman, R. A. Millikan; third vice chairman, John C. Merriam; treasurer, George K. Burgess; permanent secretary, Vernon Kellogg. George E. Hale of the Mount Wilson Observatory, Pasadena, California, was honorary chairman. Headquarters of the Council are on B Street, between 21st and 22nd Streets, Washington, D. C.

RESERVE OFFICERS, RESERVE OFFICERS TRAINING CORPS. See MILITARY PROGRESS, under *United States*.

REUNION, rā'y'nyōn'. An island belonging to France, about 420 miles east of Madagascar. Area, 970 square miles; population, according to the census of 1921, 172,190, of whom 167,947 were Europeans, mainly of French origin. The chief towns with their population in 1921 were: St. Pierre, 27,805; St. Denis, 21,538; St. Paul, 19,456; and St. Louis, 14,803. The chief port is Pointe-des-Galets. The principal products are rum, sugar, manioc, coffee, tapioca, vanilla, spices, etc. The production of rum in 1925 was 1,043,963 gallons, the greater part of which was exported. The exports in 1926 amounted to 164,896,000 francs and the imports to 164,883,000 francs. The chief exports were sugar and rum, and the chief imports rice and grain. In 1925, 111 vessels entered and 109 vessels cleared from ports of the island. There are about 80 miles of railways. The budget for 1925 balanced at 29,815,728 francs, and the debt on Jan. 1, 1925, was 566,500 francs. The government of the island is administered by a governor, aided by a privy council and an elected council-general. Reunion is represented in the French Parliament by one senator and two deputies.

REVOLUTION, AMERICAN, ANNIVERSARIES. See CELEBRATIONS.

RHEUMATISM. One of the most significant developments of social medicine of recent years was the formation in various countries of societies for the prevention of rheumatism and chronic joint diseases which play so conspicuous a rôle in determining disability and loss of working days. Nearly one-sixth of the working men suffer from this factor. In 1926 an International Committee for the Study of Rheumatism was represented by membership from the following countries: The United States, Austria, Czechoslovakia, Belgium, Denmark, France, Great Britain, Holland, Hungary, Italy, Japan, Norway, Roumania, Russia, Spain, Sweden and Switzerland. National societies have at the same time been formed and the German

Society for Warfare against Rheumatism held its first session on August 2. See also HEART DISEASE.

RHINELAND. See GERMANY, under *History*
RHODE ISLAND. POPULATION. According to a State census made in 1925, the population was 679,260, as compared with 604,397 at the United States Fourteenth Census in 1920, and 595,986 at the census of 1915. The estimated population on July 1, 1927, was 704,000. The capital is Providence.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1927	46,000	61,000 *	\$1,327,000
	1926	47,000	60,000 *	1,478,000
Corn	1927	10,000	380,000	456,000
	1926	9,000	369,000	424,000
Potatoes	1927	2,000	220,000	341,000
	1926	3,000	450,000	810,000

* tons.

MINERAL PRODUCTION. The total value of the State's mineral products in 1925 was \$1,151,857; in 1924, \$1,132,641. The production of stone, the largest single element in this total, was 153,230 short tons in 1925; in 1924, 171,350 tons. The product was valued at \$724,428 for 1925; for 1924, at \$742,701. Sand and gravel and some lime and graphite were also produced.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending November 30, 1926, were \$6,568,384; their rate per capita was \$9.49. They included \$433,238 apportioned for education. Totals not included in the above, of \$516,263 in interest and \$3,624,489 in outlays for permanent improvements, brought the aggregate of State expenditure to \$10,709,136. Of this, \$3,625,408 was for highways; \$938,827 being for maintenance and \$2,686,581 for construction.

Revenue receipts were \$9,898,960; or per capita, \$14.02. Of their total, property and special taxes yielded 44.9 per cent, attaining a per capita rate of \$6.30. Earnings of departments and compensation paid the State for officials' services furnished 6.7 per cent of revenue; 36.9 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a gasoline sales tax.

Net State indebtedness on November 30, 1926, was \$11,060,134, or \$15.98 per capita. Property subject to ad valorem taxation bore a valuation of \$1,237,174,813. State taxes levied thereon were \$1,484,003, or \$2.14 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on January 1, 1927, was 190.29. No further construction of track mileage in 1927 was reported.

EDUCATION. Besides establishing the minimum length of the school year at 180 school days, the General Assembly extended the statute covering the Americanization of the foreign born so as to provide home classes for women. Appropriations, according to Commissioner of Education Ranger, in the *Journal* of the National Education Association, were made to a total of \$1,250,000 for buildings for the State College and for the Rhode Island College of Education. The school population of the State, including individuals between the ages of four and 21 years,

was given in 1927 as 201,045. There were enrolled in the public schools 112,869 pupils. Of these 98,300 were in the elementary schools and 14,565 in high schools.

CHARITIES AND CORRECTIONS The State Public Welfare Commission, a body of twelve appointed members serving for terms of six years, managed and controlled in 1927 the group of institutions situated on the State Farm at Cranston. These, with their respective totals of inmates on Nov. 30, 1927, were: State Reformatory for Women, 102; State Hospital for Mental Diseases, 1741; State Infirmary, 710; State Prison and Providence County Jail, 530; State Reform Schools (Sockanosset School for Boys and Oaklawn School for Girls), 218. Exeter School (for the feeble-minded) had 434 inmates and a Home and School (for dependent and neglected children) had a population of 243. The Children's Bureau had charge or oversight of 406 children in free homes and of 509 in paid homes. The Mothers' Aid Bureau furnished assistance to 303 families, 1329 individuals. A State Probation Department and a Psychological Division were maintained under the supervision of the State Public Welfare Commission. Under the appropriation supplied by a million dollar bond issue ratified at the election of 1927, construction of a women's dormitory extension at the State Hospital for Mental Diseases, a male ward at the State Infirmary, an attendants' building and a girls' dormitory at Exeter School and an addition to the office building of the State Prison were undertaken.

LEGISLATION. The General Assembly convened in regular annual session January 4, and adjourned April 21. It passed measures providing for a bond issue, previously approved by electors of the State, to a total of \$7,685,000 for construction projects, including a Washington Bridge, a State office building, additions to the State College of Education and to penal and charitable institutions. From one cent, the State tax on motor gasoline was raised to two cents a gallon. A redistricting of the State for the election of State senators was provided. It allowed each city or town one senator for every 25,000 qualified electors, or residual major portion of that number, and prevented the loss to any city or town of any part of its existing representation. The proposal was to be submitted to popular vote in 1928. Similarly to be submitted to a referendum vote, was a measure abolishing the property requirement for voters in cities, and permitting its abolition in towns such as might so choose; this amendment of the State voting qualifications removes one of the last of the States from the once long list of those requiring a substantial property interest as an essential to the franchise. Biennial registration of voters, biennial elections and a grant to qualified voters absent from the State to vote by mail were also passed, to go before the people in referendum votes.

For support of the regular activities of the State government during the ensuing year there was appropriated \$6,371,237. The State Board of Agriculture was reorganized and erected into a department headed by a full-time commissioner; likewise the system of testing cattle and slaughtering the tuberculous, which had been criticized, was reformed. A commission was created to construct the Washington Bridge. Women were made subject to jury duty "unless unable

or unwilling." A commission was created by act to survey the water supply situation of the State. By resolution, Congress was asked to put immigrant quotas on the basis of the 1920 census. By statute, the possession of dangerous weapons was regulated. Other acts created a judicial council; established rotating funds for the use of State departments; and increased the penalty for driving a vehicle while intoxicated.

POLITICAL AND OTHER EVENTS. In October the final link in an improved highway between Providence and Fall River was opened. A new Newport County court house was completed, and was opened in September, and in Providence the County Court House Commission received plans for the new structure to be erected there. The closing of the Social Mill, one of the large textile establishments of Woonsocket, in February, caused apprehension that this plant, like the Nourse mill, closed the year previous, would be dismantled.

OFFICERS. Governor, Aram J. Pothier; Lieutenant-Governor, Norman S. Case; Secretary of State, Ernest L. Sprague; Treasurer, George C. Clark; Auditor, Philip H. Wilbour; Attorney-General, Charles P. Sisson.

JUDICIARY. Supreme Court: Chief Justice, William H. Sweetland; Associate Justices; Chester W. Barrows; Charles F. Stearns, Elmer J. Rathbun, John W. Sweeney.

RHODES, JAMES FORD. An American historian, died at Brookline, Mass., on January 22. He was born in Cleveland, Ohio, May 1, 1848, and was educated at New York University and the University of Chicago. In 1867 he went to Paris to attend lectures at the Collège de France, following which he took a course of metallurgy at the School of Mines in Berlin. He investigated the iron and steel industries in Germany and Great Britain, and after his return to America he conducted similar investigations in the southern part of the United States. From 1870 until 1885 he was engaged in his father's iron and steel business in Cleveland. He then decided to pursue his historical studies and began the preparation of a *History of the United States from the Compromise of 1850* (7 vols., 1893-1906), a political narrative and analysis of the events growing out of slavery, the Civil War, and Reconstruction. It is a most authoritative work for the period with which it deals. The author's style is by no means unattractive, and the work is uniformly impartial and characterized by a great amount of candor, sincerity, fairness and thoroughness. Mr. Rhodes was also the author of *Historical Essays* (1909); *Lectures on the American Civil War*, delivered at Oxford University in 1913; *History of the Civil War* (1917); *History of the United States from Hayes to McKinley* (1919, and rev. ed. 8 vols. 1920); *The McKinley and Roosevelt Administration* (1922). He was awarded the Loubat prize of the Berlin Academy of Science (1901); the gold medal of the National Institute of Arts and Letters (1910), and the Pulitzer prize of Columbia University for history (1918). Many American and several foreign universities including Oxford gave him honorary degrees.

RHODESIA, rō-dē'zhī-ā or -zī-ā. The name given to a stretch of British territory in Central Africa, extending northward from the Transvaal to the borders of the Belgian Congo and Tanganyika Territory, constituting a British

protectorate; bounded on the east by Portuguese East Africa, Nyasaland and the Tanganyika Territory, and on the west by the Belgian Congo, Portuguese West Africa and Bechuanaland. It is divided into Northern Rhodesia and Southern Rhodesia by the Zambesi River; Southern Rhodesia comprises Matabeleland and Mashonaland.

NORTHERN RHODESIA. In 1911 this region was formed from the former provinces of Northeast and Northwest Rhodesia. Area, 287,950 square miles; the permanent European population in December, 1925, was 4624 and the native population, 1,140,642. The seat of the government is at Livingstone, on the Zambesi. The chief crops are corn, cotton, wheat, tobacco, fruits, and rubber, and the minerals include gold, copper, zinc, and lead. The total value of all minerals mined in 1925 was £78,477, to which lead contributed £51,455. Imports in 1925 amounted to £1,817,907; exports, £432,997. The chief exports are live animals, lead, copper, corn, flour, hides and skins, and tobacco. The administration consists of a governor and executive council and a legislative council, partly official and partly elected, the official members having the majority. Governor after Apr. 1, 1924, when the British South Africa Company was relieved of the administration, Sir Herbert J. Stanley.

SOUTHERN RHODESIA. The area of this section of Rhodesia is estimated at 149,000 square miles and the population, according to a census taken in May, 1926, 39,174 Europeans and about 834,473 natives. Capital, Salisbury.

According to the foreign trade statistics for the calendar year 1926, the combined trade of the colony amounted to £12,350,147, an increase of £1,734,760 over 1925 figures. For the past five years imports and exports have advanced progressively, the 1926 trade being about 45 per cent above the 1922 level, when the total amounted to £8,506,804. As was to be expected, the notable feature of the 1926 trade was the marked expansion in imports, which rose from £4,892,180 in the preceding year to £6,349,799. In the native products which the country exports, there were considerable gains made during 1926 in shipments of tobacco, chrome ore, coal and agricultural products. The advance in tobacco exports was particularly striking evidence of the favorable progress of the industry. Raw cotton registered an increase in the actual quantity exported but a decrease in value. Raw asbestos and gold exports declined.

Maize is the largest crop, the 1925-26 yield being 1,400,000 bags, the second highest on record. Tobacco, however, was the crop that was attracting most attention, and the 1926 crop of 5,000,000 pounds of Virginia and 346,000 pounds of Turkish tobacco was expected to be exceeded in 1927, partly as the result of the importation of American experts to teach the most modern methods of growing the product. Southern Rhodesia is highly mineralized, and is in the fortunate position of having valuable coal reserves strategically placed with respect to a vast surrounding territory.

The total revenue of the colony as brought out in the returns for the year ended Mar. 31, 1927, passed the £2,000,000 mark, and a substantial budget surplus developed in spite of an unforeseen increase in expenditures on roads and bridges, and for medical prevention work.

Executive power is vested in a governor aided by an executive council; legislative power in an

elected legislative assembly. Governor and Commander-in-Chief in 1927, Lieut.-Col. Sir John R. Chancellor; Prime Minister and Secretary for Native Affairs, Sir C. P. J. Coghlan.

RICE. Production estimates for 1927 received from eight important rice growing countries by the International Institute of Agriculture, Rome, indicated the yield for these countries to be 883,893,000 bushels of rough rice, or an increase of 8 per cent over the production of 1926 and of 7 per cent over the average yield for the five years 1921-1925. The rice areas of these countries showed a reduction of 5.3 per cent as compared with the average acreage for 1921-1925. The estimated yields in 1927 for the leading rice growing countries reporting were as follows: Japan 538,742,000 bushels, Korea 152,098,000 bushels, Madagascar 42,842,000 bushels, Italy 34,073,000 bushels, and Spain 13,784,000 bushels. India in 1926 reported a production of 2,259,757,000 bushels. China in normal times is estimated as producing about 30 per cent of the world's rice crop. As estimated by the Department of Agriculture the United States, in 1927, produced 40,321,000 bushels on 989,000 acres, or at the rate of 40.7 bushels per acre. In 1926 the production was 41,730,000 bushels on 1,034,000 acres, the rate per acre being 40.4 bushels.

The average farm price on Dec. 1, 1927, was 93.8c. per bushel, and on Dec. 1, 1926, \$1.096 per bushel. At these prices the total value of the crop of 1927 was \$37,728,000, and of the crop of 1926, \$45,722,000. The yields of the eight states reporting rice production were estimated as follows: Louisiana 17,316,000 bushels, California 8,960,000 bushels, Arkansas 7,438,000 bushels, South Carolina 90,000 bushels, Missouri 75,000 bushels, Georgia 48,000 bushels, and Mississippi 25,000 bushels. The average farm price on Dec. 1, 1927, in these states ranged from 86c. per bushel in Texas to \$1.30 per bushel in South Carolina. The average yield per acre ranged from 16 bushels in Georgia to 56 bushels in California. The exports of rice from the United States for the calendar year 1927 amounted to 239,596,461 pounds, and of rice flour, rice meal and broken rice to 70,402,695 pounds. During the same period 43,229,507 pounds of cleaned rice, 10,675,855 pounds of uncleaned rice, and 2,365,779 pounds of rice flour, rice meal, and similar rice products were imported.

United States grades for milled, brown and rough rice were promulgated by the Secretary of Agriculture and were to become effective Sept. 15, 1927. Rice grading schools were conducted during the year in Missouri and Arkansas. Progress was reported from California in the handling by farmers of the rice grain in bulk rather than in sacks.

RICE INSTITUTE. An institution of higher education at Houston, Texas, opened in 1912. The enrollment for the autumn term of 1927 was 1318, and the faculty numbered 88. The plant, equipment, and productive funds of the institution were estimated at \$14,000,000, and the income from endowment for the fiscal year 1926-27 was in excess of \$800,000. The library contained approximately 55,000 volumes. President, Edgar Odell Lovett, Ph.D., Sc.D., LL.D.

RICKETS. Professor A. Orgler, one of the leading authorities on this disease, gave a summary of our knowledge of it in the *Klinische Wochenschrift* for Aug. 6, 1927. Progress had been great during the previous five years, but,

although there had been striking advances in treatment and prevention, there was not much known of the nature of the malady, so that the knowledge was still empirical. Rickets is clearly a disease of nutrition or metabolism of the character of an acidosis, but the latter may not represent the intimate nature of the disease. The urine in the latter shows increase in acidity and under the influence of high solar and other ultra-violet rays and cod liver oil the urine becomes normal. The most important discovery of recent years was the rôle of vitamin D in the prevention and cure of the disease, and the benefit derived from the oil was probably due to its content of this substance. Not only does direct exposure of the children to the ultra-violet rays exert a curative action, but the application of the same rays to the necessary food articles gives them new therapeutic values.

In addition to cod liver oil, milk, inert oils and various substances containing lipoids such as ergosterin have been subjected to the action of the rays, which are believed to transform certain indifferent substances into vitamin D. This use of the rays caused the mere question of diet to recede in importance.

Ergosterin, or ergosterol as it is termed in the United States, is an exact chemical substance akin to cholesterol which is supplied by manufacturers in both activated and inactivated forms, activation being effected with various forms of ultra-violet rays, one of which is the magnesium spark lamp. During the year it received an extensive trial in many clinics in Europe and the United States, and while the good results were not uniform they were in some cases startling in their rapidity and thoroughness. Although some of the clinicians assumed that the benefit was due to the vitamin D of the food medicine, others made no reference to the latter. One author preferred to term the unknown active principle the "antirachitic protective and curative substance" which is presumably absent, or present in insufficient quantity, in the rachitic infant. See **FOOD AND NUTRITION**.

RIDEOUT, HENRY MILNER. An American author, died at sea on September 17. He was born in Calais, Maine, on Apr. 25, 1877, and graduated from Harvard in 1899, but remained at the university as instructor in English until 1904. He edited several text books in collaboration with Charles T. Copeland. Mr. Rideout was a prolific author of short stories and novels, usually salted with adventure. Among the titles are *The Siamese Cat* (1907); *Dragon's Blood* (1909); *The Twisted Foot* (1910); *White Tiger* (1915); *The Winter Bell* (1922); *Man Eater* (1924).

RIGGE, WILLIAM FRANCIS. An American astronomer, died at Omaha on March 31. He was born in Cincinnati, Ohio, Sept. 9, 1857, and after the grammar school entered St. Xavier College, Cincinnati, and graduated in 1870. In 1875 he entered the Jesuit Order and commenced a three years' course in philosophy, mathematics and the sciences. He was ordained priest in 1890, and a year later became teacher of mathematics and astronomy in St. Louis University. In 1896 Father Rigge went to Creighton University, Omaha, and remained there as professor of astronomy until his death. Through his efforts the Creighton Observatory was built and a science department established. His published works are *The Graphic Construction of Eclipses and Occultations* (1924) and *Harmonic Curves*

(1926). For the latter work he spent 10 years in devising and perfecting a machine for drawing such curves. He also contributed to many scientific magazines.

RINKOLITE. See **CHEMISTRY**, under *Mineralogical Chemistry*.

ROADS AND PAVEMENTS. With county, State and Federal-aid highways rapidly being spread in one great network over the whole United States there was no longer much difference between highway improvement and city pavement except that granite or other stone block pavements were still being put down sometimes in city streets under very heavy traffic. Even here the demand was growing for a smoother type of pavement, either all concrete from base to surface or a heavy base of concrete surfaced with asphalt—alternative types of construction widely used on the country highways subjected to heavy traffic.

FEDERAL-AID ROADS. During the fiscal year ended June 30, 1927, about 8300 miles were added to the improved roads in the Federal-aid highway system, bringing the total length of these roads up to 64,209 miles according to the annual report of the United States Bureau of Public Roads. Federal aid to State road construction totaled \$81,371,000 for the year, the excess over the annual appropriation of \$75,000,000 for this purpose having been made up from unexpended balances of the previous year. "The annual highway bill of the country," the report mentioned states, "is in excess of a billion dollars, including all expenditures of the Federal, State, county and other local government, for construction, maintenance and administration." The Federal contribution to this amount "is less than 8 per cent, and the States alone spent, from their own funds, more than six times the amount they received from the Federal government." The Federal-aid highway system comprises a total of 185,000 miles, as laid out a few years ago, of which about a third had already been improved with Federal assistance. Bridges over 20 ft long built by States with Federal aid in 1926-27 aggregated almost fifty miles in length. Of these bridges, the one across the Choctawhatchee River in Florida between Westville and Cayville is more than two miles long, and two others are each more than a mile in length. See **AGRICULTURE**, U. S. DEPARTMENT OF.

GASOLINE AND AUTOMOBILE TAXES. For the 48 States of the Union, according to *American Highways* (the official organ of the Association of State Highway Officials, Washington, D. C.), taxes on gasoline and automobiles totaled almost \$475,000,000 for the year 1926. Massachusetts and New York were the only States in the Union at the close of 1927 without gasoline tax, Illinois and New Jersey having provided for such a tax for the first time during the year. Ohio's gasoline tax, according to *American Highways* was five cents, an amount which was also levied in the States of Arkansas, Florida, Kentucky, New Mexico, and South Carolina. One State has a 4½ cent rate, while in nine the rate is four cents, in two 3½ cents, in 17 three cents, in 12 two cents—the latter being the rate in the two accessions to the list in 1927, Illinois and New Jersey, but in New Jersey the local personal property tax on automobiles was abolished by the new law.

SNOW AND FLOODS. About 117,000 miles of main roads in 36 States of the Union, according

to figures compiled by the American Automobile Association, were to be kept clear of snow in the winter of 1927-28 at an estimated cost of over \$5,000,000. The Association also estimated that for every hundred dollars spent on snow removal a thousand dollars is gained in increased efficiency of transportation and business. The average cost of highway snow removal in 1926-27 was set by the association named at \$43 per mile for the 106,000 miles kept clear that winter, ranging from \$6 a mile in Virginia to \$135 a mile in Wisconsin. Thousands of miles of roads were submerged in the Mississippi Valley by the floods of 1927, but mile for mile the damage done by the mere submergence was small compared with the ruin to hundreds of miles of road in the flooded districts of New England in November. In Vermont and New Hampshire, particularly, not merely the roadbeds but for many long stretches the roadways for many feet beneath were washed out. In special one-day sessions in each of the states named, Vermont appropriated \$8,000,000 and New Hampshire \$3,000,000, for the reconstruction of the roads and bridges.

A NEW HIGHWAY PROBLEM. The completion of great bridges and tunnels on main highway routes is introducing a new problem in highway construction. Large as is the cost of the Holland vehicular tunnel between New York City and Jersey City, put in operation late in the year, it was only a beginning of what is required to accommodate the 20,000,000 or more of vehicles that will pass through the tunnel yearly. On the New York side, existing streets, although inadequate, serve the incoming and outgoing traffic, but on the New Jersey side it was necessary to build many miles of new highway extending through Jersey City across the meadows through Newark and on into Elizabeth, at a total cost of some \$30,000,000. This highway was to be about 13 miles long.

FOREIGN. Contracts were let early in 1927 and later construction was started on a central highway for Cuba extending the whole length of the island from Pinar del Rio to Santiago. For this distance of 705.6 miles the road was to be paved to a width of 20.66 ft. with an American type of bituminous surfacing on a concrete basis, with thickened outer edges. The construction work was let in two contracts, 70 per cent going to the proprietors of the type of surfacing adopted and 30 per cent to a Cuban firm. Unit prices of the two contracts total about \$76,000,000. The National Assembly of Czechoslovakia authorized a national highway fund of \$30,000,000 in 1927 to be used during ten years for the construction and maintenance of roads. Another law provided for national taxation of motor vehicles for the benefit of the highway fund, as also were devoted the receipts from import duties on mineral oils and automobile tires.

COUNTY AND CITY WORK. As illustrating the division of a county highway appropriation among several branches of the work, it may be stated that of \$8,000,000 bonds for highway purposes voted by Allegany County, N. Y., \$4,500,000 will go for new construction; \$1,088,000 for what is termed "joint road" improvement; \$1,162,000 for reconstruction and widening; \$800,000 for grade crossing elimination; \$500,000 for the elimination of dangerous curves; and \$400,000 for the erection of safety barriers. To supervise this work the county commissioners set up a department of public works and appointed a

chief engineer, the latter to be assisted by an engineering staff.

Detroit may be cited as an illustration of extreme activity in paving due to its rapid growth for some years past. During 1927 Detroit paved 168 miles of street on a total area of 3,338,000 sq. yd. at a total cost of nearly \$11,000,000. In addition it paved 233 miles or 2,346,000 sq. yd. of alleys at a total cost of \$5,500,000. For the five years 1923-1927 Detroit paved 544 miles of streets and 223 miles of alleys at a total cost of over \$50,000,000, this sum not including money spent for maintenance and repaving of existing streets. Even with all this activity only 1380 out of a total of 2670 miles of streets were paved at the close of the year, and only 410 out of 1850 miles of alleys. These activities and the work yet remaining to be done are explained in part by the fact that in 1924-25 Detroit annexed 46 square miles of outlying territory in which there were 990 miles of unpaved streets.

BIBLIOGRAPHY. New books and new editions are: Agg and Brindley, *Highway Administration and Finance* (New York); Harrison, *Management and Methods in Concrete Highway Construction* (New York); Green, *The Science of Road Making* (London); Neumann, *Der Neueste Strassenbau* (Berlin).

ROBBINS, WILFORD LASH. An American clergyman and theologian, died at Bethel, Maine, on September 5. Born at Bethel in 1859, he was graduated from Amherst in 1881 and received his theological education at the Episcopal Theological Seminary at Cambridge, Mass. He was ordained in 1884 and advanced to the priesthood the following year. After two years as rector at Lexington, Mass., he became dean of All Saints' Cathedral in Albany. He was well known for his sympathy with high-church doctrine. He was elected dean of the General Theological Seminary in New York City, serving from 1913 until 1916. He received the degree of D.D. from St. Stephens' College, 1891; Amherst, 1903; Princeton, 1908, and the General Theological Seminary in 1912. He was made LL.D. by Hobart in 1903. He wrote *An Essay Toward Faith* (1900); and *A Christian Apologetic* (1902).

ROBINEAU, GEORGES. A French financier, died in Paris on April 9. He was born at Bar-le-Duc in July, 1860, and was educated in that town. Specializing in finance, in 1886 he entered the Bank of France where he gradually rose successively through responsible posts to become governor, 1920-1926. During these years of his governorship of the bank his attitude was subject to considerable controversy. He was reproached with being too conservative and with placing the interests of the bank above those of his country. He strongly opposed any resort to inflation, even though compelled to continue printing bank notes during 1925 and 1926 to meet the needs of the treasury, and he remained a firm believer in the ultimate recovery of the franc. When Caillaux took office in June, 1926, as minister of finance he stipulated for a free hand as regards the personnel of the bank and Governor Robineau resigned.

ROBINSON, FREDERIC CAYLEY. An English artist, died in London on January 5. Born at Brentford, near London, on Aug. 18, 1862, he received his early education at Cliftonville, Kent, and later studied at the Royal Academy Schools in London, and in Paris and Italy. Much of his art shows the influence of Puvis de Chavannes,

but may be identified more closely with the work of the Pre-Raphaelites than with modern tendencies. This is especially indicated in the carefully drawn, minutely finished details and in the elongated, quaintly mediæval effects. His "Souvenir of a Past Age" was exhibited in the Royal Academy in 1895 and later went to Adelaide, Australia. "Close of Day" (1896) was hung at the Paris International Exhibition. His "Youth" went to South Africa, "A Winter Evening" and "The Fisherman" are in the Italian National collection, and "The Death of Abel" is in the Luxembourg in Paris. A pastoral painted in 1924 was purchased for the British nation. He illustrated Genesis for the Medici Society. Robinson was also interested in marine paintings and spent two years aboard a small yacht to paint "Outward Bound" and "Drifting."

ROCHESTER, UNIVERSITY OF. A coeducational, non-sectarian institution of higher education at Rochester, N. Y.; founded in 1850. It consists of three schools: the College of Arts and Sciences, composed of a college for men and a college for women; the Eastman School of Music; and the School of Medicine and Dentistry. A school of nursing is maintained in conjunction with the Strong Memorial Hospital, the property of the University. The enrollment for the autumn session of 1927, exclusive of extension division and special music students, totaled 1487, distributed as follows: arts and sciences, 953, of whom 503 were men and 450 were women; bachelor of music course, 305; certificate of music course, 41; home economics, 15; medicine and dentistry, 80; nursing, 56. For the summer session 838 were enrolled in the arts college, and 479 in the music school. There were 1750 in the extension division. The faculty had 283 members, as follows: college of arts and sciences, 105, 27 of whom were new appointments; school of music, 83; school of medicine and dentistry, 101, of whom 47 were on full time. The productive funds as of June 30, 1927, were \$25,614,000 and the total resources, including land, buildings, equipment, and endowment, were approximately \$43,187,910. The main libraries contained over 125,000 volumes, the Eastman library over 16,500, and the school of medicine library over 3000. During the year a twelve-story building was constructed for the school of music to provide much needed practice rooms, gymnasium and other facilities. Ground was broken on May 21, 1927, for the first of the new buildings of the college for men; other buildings were begun during the year, to be completed by 1930. President, Rush Rhees, A.M., D.D., LL.D.

ROCKEFELLER FOUNDATION. An institution chartered in 1913 "to promote the well-being of mankind throughout the world." The scope of its activities in 1927 was in a broad way indicated by the names of the two divisions through which it carried on its work: the International Health Division and the Division of Medical Education.

The Rockefeller Foundation during 1927 (1) gave funds for land, building, equipment, operation, or endowment to 19 medical schools in 14 countries, including the faculties of medicine at the Universities of Montreal; Edinburgh; Strassburg; Cambridge; Brussels; São Paulo, Brazil; University College, London; University of Lyons; American University of Beirut; Chulalongkorn University, Bangkok, Siam; and the University of Zagreb, Jugo-Slavia (toward the

maintenance and equipment of a department of hygiene); to the College of Medicine of the State University of Iowa, and to various other medical schools in Japan, China, Italy, and France.

(2) The Foundation continued to support the Peking Union Medical College and to promote the better preparation of Chinese medical school matriculants by giving aid to improve the teaching facilities of the departments of physics, chemistry, and biology in the following institutions: Fukien Christian University, Foochow; National Southeastern University, Nanking University, and Ginling College, Nanking; Lingnan University, Canton; Nankai University, Tientsin; St. John's University and Shanghai College, Shanghai; Shantung Christian University, Tsinan; Soochow University, Soochow; Yenching University and Tsinghua College, Peking; and Yale-in-China, Changsha. (3) Assistance was also given to the departments of physics, chemistry, and biology in 13 Chinese institutions and in Chulalongkorn University, Bangkok. (4) Funds were given to the University of London for the purchase of a site.

(5) With a view to improving facilities for the training of public health workers, contributions for building, equipment, maintenance, or endowment were made during the year to nine institutes of hygiene or public health, namely: the School of Hygiene of the University of Toronto, for endowment; the Harvard School of Public Health, for endowment; the Institute of Hygiene, São Paulo, toward the construction and equipment of a new building; the State Institute of Public Health, Prague, Czechoslovakia, for building and equipment; the London School of Hygiene and Tropical Medicine, toward land, building, endowment, and maintenance; the State Hygienic Institute, Budapest, Hungary, toward building and equipment; the State Institute of Hygiene, Oslo, Norway, for building; the School of Hygiene, Warsaw, Poland, for salary and traveling expenses of a biochemist appointed to organize and direct the Department of Biochemistry; the School of Public Health, Zagreb, Jugoslavina, for the completion of its new building. Aid was also given toward the improvement of public health teaching in the Medical School of Harvard University and the Imperial College of Tropical Agriculture, Trinidad. (6) Seventeen nurse-training institutions in nine countries also received aid. (7) Laboratory equipment or scientific journals were supplied to institutions in 19 countries of Europe where the post-war economic pressure is still felt. (8) Assistance was given to 21 governments to bring hookworm disease under control.

(9) Funds were contributed toward the support of approximately 260 county health units in 23 States of the United States, and toward budgets for health work among the flood sufferers in 83 counties of six States in the Mississippi flood area; and aid was given to 26 local health programmes in 14 foreign countries. (10) Assistance was given in organizing or maintaining certain essential departments in the national health services of 19 foreign countries and in the state health services of 19 states of the American commonwealth. (11) Eight states of Brazil were aided in taking precautionary measures against yellow fever. (12) The Foundation participated in malaria control demonstrations in 8 Southern States of the United States, and in 11 foreign countries.

(13) In West Africa the Foundation's Yellow Fever Commission continued its studies on the Gold Coast and in Nigeria. Because of the failure of the staff to isolate *Leptospira icteroides* or to determine the means whereby the West African disease was spread, the problem changed from one of control to one of determining the identity of the disease. The 1927 programme comprised therefore (a) a careful study of all reported cases to determine their epidemiology and clinical manifestations, (b) further studies of the gross and microscopic pathology of the disease, (c) laboratory investigations, including primarily a search for a susceptible animal so that the disease might be transmitted and studied experimentally and its method of transmission in nature determined. Yellow fever was widespread on the West Coast during the year. Late in 1926 there had been an outbreak in Senegal and a recrudescence occurred in May, 1927, which developed into a considerable epidemic. A series of outbreaks occurred in native towns on the Gold Coast northeast of Accra; the French provinces of Dahomey and Togoland were infected, and cases were reported from Monrovia in Liberia.

(14) The foundation aided the advancement of biological science by support of the Institute of Biological Research of the Johns Hopkins University and by contributions to the International Abstracting Service for the publication of *Biological Abstracts*; to the State University of Iowa for research in brain physiology; to Yale University for anthropoid research; to the Australian National Research Council for biological studies in Australian universities; to the Bernice P. Bishop Museum, Honolulu, for research in Polynesian anthropology; and to the University of Hawaii toward the support of the departments of biology and psychology. (15) Eighteen hospitals in China received assistance. (16) The Foundation provided directly, or through some other agency, fellowships for approximately 800 men and women from fifty-two countries. (17) It paid the traveling expenses of more than a score of officials or professors making study visits to the United States or foreign countries, either individually or as members of commissions. (18) It lent staff members as consultants and made small gifts to many governments and institutions. (19) It gave assistance to the following items in the programme of the Health Section of the League of Nations: International interchanges of public health personnel; epidemiological and public health intelligence service; training of government officials in vital statistics; the epidemiological intelligence bureau in the Near East; and the centre of public health documentation in the Health Section, and (20) made surveys of health conditions and of medical and nursing education in several countries. (21) The Foundation aided mental hygiene projects in the United States and Canada, demonstrations in dispensary development in New York, research and teaching in hospitals and clinic services, and various studies and other undertakings in medical and nursing education and allied fields.

In Canada the provincial governments of Quebec and British Columbia were aided in developing rural health programmes. In Quebec four county health units were in operation at the end of the year, two of them joint units serving two counties each, and three additional

units had been authorized. In British Columbia authorization had been given for the establishment, near Victoria, of a local health unit similar in character to a county health unit. In Spain the government was assisted in anti-hookworm work in the mines of Jaen and Cordoba provinces and in Jugo-Slavia a demonstration in rural health work was carried on in Macedonia (Southern Jugo-Slavia), while at the invitation of the government a member of the field staff of the International Health Division made a survey of public health conditions in Bosnia and Herzegovina. In Palestine the Foundation made a small contribution toward drainage projects and provided the services of a sanitary engineer who assisted the government in malaria control measures. The Philippine Islands health authorities were aided in malaria studies, and representatives of the International Health Division served as advisers on the malaria control programme and on the development of a public health diagnostic laboratory service for the Islands. Services in hookworm work were rendered in many countries.

In Italy the Foundation continued to cooperate with the National Department of Health and the government of Rome in field studies of malaria and demonstrations of malaria control, and assistance was given in organizing anti-larva campaigns and in training personnel in a number of the provinces.

ROCKS. See GEOLOGY.

RODNEY, GENERAL GEORGE BRYDGES. An American soldier, died at San Francisco, Cal., September 21. He was born at New Castle, Del., on Oct. 17, 1842, and had his early schooling in Philadelphia, Pa. At the outbreak of the Civil War he enlisted as private of Pennsylvania artillery. He was breveted captain at the battle of Stone River for bravery and later major. At the close of the war he was appointed lieutenant in the Fourth United States Artillery serving continuously in this arm. He became colonel of artillery in 1901, and brigadier-general in 1903, just before he retired.

ROENTGEN RAYS. See HEART DISEASE.

ROGERS, HOWARD JASON. An American lawyer and exposition official, died in New York City on September 28. He was born at Stephentown, N. Y., Nov. 18, 1861, and graduated from Williams College in 1884. He was admitted to the bar in 1887, and in 1893 supervised the New York State Educational Exhibit at the Chicago Exposition. In 1895 Mr. Rogers was appointed Deputy State Superintendent of Public Instruction in New York. In 1900 he went to the Paris Exposition as head of the department of education and social economy of the American Commission. He was chief of the department of education at the St. Louis Exposition, and had charge of the New York State exhibit at Seattle in 1909. From 1919 to 1922 he was manager of the Atlantic division of the Red Cross and was executive director of the New York County Chapter of the Red Cross after 1924. Columbia University made him an honorary Master of Arts and Northwestern a Doctor of Laws. The international scope of his work is evidenced by the conferring upon him of orders by France, Japan, Germany, Poland, Italy, Sweden and Belgium.

ROMAN CATHOLIC CHURCH. The year 1927 at the Vatican was noted for the many especially American incidents. On February 12

and on March 29 the Pope gave special audiences to two groups of officers and sailors of the U. S. Navy, addressing them in most affectionate terms. In June, to the Rev. Dr. Edmund Walsh, S.J., and to Cardinal Dougherty of Philadelphia he praised the generosity of the Catholics of the United States in responding to his appeal for the Near East Relief Fund. Mayor Walker of New York had an audience on September 9, when the Pope again paid a high tribute to American charity. On September 28 a party of 200 members of the American Legion were received and the Pope thanked and blessed them and the whole American people. He also on the same day expressed his admiration of and commendation for the work of the Knights of Columbus.

In his annual review of the year, in response to the greetings of the Cardinals on December 24, the Pope said he had some causes for joy, but the persecutions of the Church in Mexico, Russia, and China were "savage and barbarous episodes unequaled in cruelty and atrocities." He protested against the imputation that he had a political motive in his condemnation of *L'Action Française*. He took pride in the development of religious education in Italy and rejoiced in the happy outlook for the general welfare of the Church during the coming year. On March 31 he had received a delegation of the exiled Mexican bishops and promised to do whatever he could to alleviate the economic condition of the persecuted clergy of Mexico, and expressed the greatest admiration for the heroic conduct of the Mexican Catholics.

THE CARDINALS. Seven cardinals were created during the year and seven died. At the January consistory Mgr. Lorenzo Lauri, Apostolic Nuncio to Poland, and Archbishop Giuseppe Gamba of Turin were added to the Sacred College. At the consistory of June 20, Archbishop Van Roey of Malines and Archbishop Hlonda of Posen were created cardinals. The Pope also delivered an allocution in which he reviewed the state of the Church in China, Mexico and France. For the latter country he expressed regret at the disobedience of the Daudet faction who were a "continued scandal." He praised the mission work in China and the clergy and faithful of Mexico "bleeding for the cause of religious liberty." At the secret consistory on December 19 the Pope created five new Cardinals: Archbishop Alexis H. Lépicier, a Servite; Archbishop Raymond M. Rouleau of Quebec, a Dominican; Archbishop Pedro Segura y Saenz of Burgos, Spain; Archbishop Henry C. Binet, of Besançon; and Dom Justinian Szereedyi, a Benedictine who was also appointed Archbishop of Gran and Primate of Hungary.

The seven Cardinals who died during the year were: Vittorio A. Ranuzzi, Camerlengo of the Sacred College, February 16; Cagiano de Azevedo, Chancellor of the Church, July 11; John Czernoch, Primate of Hungary, July 26; Henry Reig y Casanova, Primate of Spain, August 25; Patrick O'Donnell, Primate of Ireland, October 22; Alessandro Lualdi, Archbishop of Palermo, November 12; John Bonzano, former delegate to the United States, November 26. In September Cardinal Louis Billot resigned because of old age, and retired to a house of the Jesuit Order, to which he belonged.

THE HIERARCHY. The annual meeting of the hierarchy at Washington, September 14-15 was

attended by 68 members including the four cardinals. A letter was received from the Pope congratulating them on their successful activities and praising the work of the National Catholic Welfare Conference. A new plan of contributions for missions was adopted; Catholic school promotion and vocations were discussed; and a request was forwarded to Rome for authorization of the celebration of the feasts of the Jesuit martyrs, Jogues, Brebeuf and their companions. The following new bishops were appointed: the Rev. Thomas J. Toolen to Mobile, Ala., February 27; the Rev. Edward J. Finnegan to Helena, Montana, and the Rev. Henry P. Rohlmann, to Davenport, Iowa, May 17; the Rev. Joseph N. Dinand, S.J., to Jamaica, August 21; the Rev. Emmet J. Walsh to Charleston, S. C., June 20; Mgr. John B. Peterson, Auxiliary Bishop of Boston, October 8; Mgr. Thomas O'Reilly to Scranton, Pa., the Rev. Edward Kelly to Boise, Idaho, the Rev. Francis Johannes to Leavenworth, Kan., and the Rev. John McNamara, Auxiliary Bishop of Baltimore, December 16. In the mission field the Rev. Pascal Robinson of Baltimore was consecrated titular Archbishop of Tiana, June 24; the Rev. Patrick J. Byrne of Washington, D. C., Prefect Apostolic of Peng Yang, Korea, November 14; and the Rev. John A. O'Shea, C. M., of Deep River, Conn., Bishop Coadjutor of Kanchow, China.

These deaths occurred among the hierarchy: Archbishop Denis J. O'Donnell, retired Bishop of Richmond, Va., June 1; Archbishop Robert Seton, Titular Bishop of Heliopolis, March 22; Archbishop John F. Canevin, retired Bishop of Pittsburgh, March 22; Archbishop J. J. Hart, formerly of Manila, P. I., Bishop of Omaha, October 29; Bishop W. T. Russell of Charleston; S. C., March 18; Bishop John J. O'Connor of Newark, N. J., May 20; Bishop Daniel M. Gorman of Boise, Idaho, June 9; Bishop Joseph G. Anderson, Auxiliary Bishop of Boston, July 2; Bishop Peter J. Muldoon of Rockford, Ill., October 8; Bishop Patrick R. Heffron of Winona, Minn., November 23.

STATISTICS. The statistics given in the *Official Catholic Directory* for 1927 showed gains in the number of priests, churches, schools, seminaries and other units. The total Catholic population was recorded as 19,483,296, an increase of 804,574. There were in charge of this body 17 Archbishops (four of them Cardinals); 99 bishops; 24,900 priests (a gain of 638), ministering in 17,651 churches, an increase of 271. The ecclesiastical seminaries numbered 141 with 13,988 students, 1393 gain. In the 6995 parish schools there were 2,167,241 pupils, a gain of 94,775. The colleges for boys numbered 179 and academies and colleges for girls, 732. In the 296 orphan asylums were 45,979 inmates. The hospitals numbered 613 and the homes for the aged, 128. Incomplete returns from the various dioceses listed 35,751 converts during the year. The reports of the 23 Catholic army chaplains showed that the Catholic services were attended by 301,038 worshipers. The latest, though not complete, records showed that there were 760,000 Catholics in the service of the United States during the World War, or 20 per cent more than the percentage of the Catholic population called for. There were five Catholics in the Senate and 35 Representatives in Congress. In the *English Catholic Directory* the Catholic population of England and Wales was given as 2,143,305, an

increase of 87,445; priests, 4160, an increase of 35; Scotland 617; churches, England and Wales, 2135; Scotland, 432; schools, elementary, 1267; secondary, 486; pupils, elementary, 370,012; secondary, 54,465; converts, 11,714.

EDUCATION. The twenty-fourth annual meeting of the Catholic Educational Association was held at Detroit, June 27-30. There were 2242 Catholic high schools in the United States with an attendance of 204,815 pupils, an increase of 61 schools and 19,717 pupils over the previous year's figures. Of these schools, 57 per cent were located in 26 of the 103 dioceses. The graduates numbered 25,311, an increase of 4809. The Catholic colleges had 74,849 students, an increase of 14,680. The women students were 35,437. The students in ecclesiastical seminaries were 15,836. Summer schools were conducted in 80 institutions. During the year Bishop Thomas J. Shahan, rector of the Catholic University at Washington, D. C., resigned after a service of 18 years.

CONVENTIONS. The annual Supreme Convention of the Knights of Columbus, held at Portland, Oregon, August 1-3, showed that the total membership was 690,732, an increase of 51,047 for the year. The programme of war welfare work was ended June 30, towards the administration of which \$43,000,000 was expended from June 16, 1917. The total assets of the order on June 30, 1927, were \$25,527,861. The Convention of the National Council of Catholic Men met in Detroit, October 16-18, and of the Women, at Washington, September 24-28. At the former, Walter T. Johnson was elected national president and at the latter Miss Mary G. Hawkes to the same office for the women. The Catholic Press Association convention was held at Savannah, Ga., May 17-19; the National Conference of Social Work, at Des Moines, Iowa, May 11-18; the National Conference on Industrial Problems at Detroit, July 1-2; and the National Conference of Catholic Charities at Los Angeles, Cal., September 4-8.

BIBLIOGRAPHY. Among the more significant books of the year were: Hilaire Belloc, *The Catholic Church and History*; Martin J. Scott, S.J., *Things Catholics are Asked About*; J. A. McClorey, S.J., *The Republic and the Church*; *Selected Letters of Baron Friedrich Von Hugel, 1896-1924*, Bernard Holland, editor; B. O. A. Windle, *The Evolution Problem as it is To-day*; *The Encyclicals of Pius XI*, James H. Ryan, editor; Francis X. Doyle, S.J., *The Defense of the Catholic Church*; C. C. Martindale, S.J., *The Faith of the Roman Church*; Ailbe J. Luddy, O. Cist., *Life and Teachings of St. Bernard*; O. F. Donovan, *The Story of the 28th International Eucharistic Congress*; Peter Guilday, *The Life and Times of John England, First Bishop of Charleston*; Marjorie Erskine, *Mother Philippine Duchesne*; Carlo Prati, *Pope and Cardinals in Modern Rome*; Martin J. Scott, S.J., *Isaac Jogues, Missionary and Martyr*; William Barry, *Roma Sacra: Essays on Christian Rome*; Georgiana P. McEntee, *The Social Catholic Movement in Great Britain*; Pierre J. Marique, *The History of Christian Education*; Thomas Walsh, *The Catholic Anthology*; Pierre du Jaric, *Akbar and the Jesuits*; L. C. Fillion, S.S., *The Study of the Bible*.

ROMANCE LANGUAGES AND LITERATURE. See PHILOLOGY, MODERN.

ROME. See ARCHAEOLOGY.

ROSS, MRS. JANET ANNE. A British author, died at Florence, Italy, on August 23. She was born in Scotland in 1842, and was educated privately. The eldest child of Sir Alexander Duff-Gordon, at the age of 18 she married a banker of Alexandria, Egypt. In 1863 she became Egyptian correspondent of the *London Times*. She left Egypt in 1867 and settled in Italy, where she spent the rest of her life. Few women have known intimately so many remarkable people as she. Among her publications were *Italian Sketches*, *Three Generations of English Women*, *Florentine Villas*, and *Lives of the Early Medici*.

ROTARY CLUBS. Organizations established for the purposes of developing the highest ideal of unselfish service; of making practical application of that ideal to the business and professional life of the individual members, to organizations of which they may be members, and to the communities and nations in which they may live; and of advancing international peace and good will through a fellowship of business and professional men of all nations united in the ideal of service. Membership in the clubs is limited to one representative of each business, profession, or institution in a community. The first Rotary Club was formed in Chicago, in 1905, by Paul Harris, a lawyer; three years later the second club was formed in San Francisco. In August, 1910, the first 16 clubs held a convention at Chicago to form a National Association, and in 1912 an International Association was formed to include clubs at Winnipeg, Canada, and London, England.

On Nov. 3, 1927, the Rotary International consisted of 2692 clubs with an approximate membership of 132,000 in 43 countries. There were 2109 clubs in the United States, 87 in Canada, 263 in Great Britain and Ireland, and 233 in other parts of the world. The official publication of the organization is *The Rotarian*, a monthly printed at Chicago. *The Rotary Wheel* is the official publication for Great Britain and Ireland. Officers for 1927-28 were: President, Arthur H. Sapp, Huntington, Indiana; vice presidents, Walter D. Cline, Wichita Falls, Texas, Leonard T. Skeggs, Youngstown, Ohio, and I. B. Sutton, Tampico, Mexico; secretary, Chesley R. Perry, Chicago, Ill., and treasurer, Rufus F. Chapin, Chicago, Ill. Headquarters of the Rotary International are at 221 East Cullerton Street, Chicago, Ill., with a branch office at 2 Pelikanstrasse, Zurich, Switzerland.

ROTHWELL, WALTER HENRY. American orchestral conductor, died at Los Angeles, March 13. He was born at London, Sept. 22, 1872. Having received his musical education at Vienna and Munich, he began his career as a concert pianist, but turned to conducting in 1895, when he became assistant conductor to Gustav Mahler at Hamburg. After filling positions in various German theatres, he went to the United States in 1904 as conductor of Savage's *Parsifal* production, in English, and remained with the Savage organization for the next four years. From 1908 until its dissolution, in 1914, he presided over the destinies of the St. Paul Symphony Orchestra. During the five years following this engagement he lived in New York as teacher and coach. From 1919 until his death he was conductor of the Los Angeles Philharmonic Orchestra. In 1908 he married Elizabeth Wolff, one of the principal sopranos of the Savage Company.

ROUMANIA. See RUMANIA.

ROVERSI, DR. LUIGI. Italian author and American editor, died in New York on January 5. Born in Bologna, Italy, in 1859, he was graduated from the University of Bologna with high honors. He took a special art course at the Royal Academy of Fine Arts at Bologna, and was editor of *La Stella d'Italia* from 1882 to 1885. Going to America, from 1885 to 1889 he was editor of *Il Progresso Italo-Americano* in New York City, a position he left to become secretary to the director of the Metropolitan Museum of Art. Since 1904 he was editor and writer for several Italian newspapers and magazines and had lectured for the Board of Education in New York, Newark, and Jersey City. His published works are *Essays on Italian Art*; *State and Church in Italy* and *Ricordi Canavesani*.

ROVSING, THORKILD. A Danish surgeon, died in Copenhagen on January 14. He was born in Flensborg, Denmark, in 1862, and graduated in 1885 from Copenhagen University where in 1889 he received the degree of M.D. and was appointed professor of clinical surgery. His contributions to abdominal surgery were especially important, and many of his published works were translated into German and English.

ROWING. College rowing in 1927 was featured by two sensational upsets, the victory won by the Columbia varsity eight in the Poughkeepsie regatta and the triumph of Harvard over Yale in their annual clash on the Thames. The success of Columbia put an end to the long string of victories achieved by Western crews in the intercollegiate classic on the Hudson, while the Crimson oarsmen finally turned the tables on their rivals who had scored six successive wins. Princeton also deserved high place in the ranking through its defeat of Yale in the Carnegie Cup regatta and its triumph in the Childs Cup contest.

Columbia's winning time for the four-mile course at Poughkeepsie was 20 minutes, 57 seconds. Washington finished second in 20:53-5, California third in 21:12 2-5, Navy fourth in 21:21 1-5, and Cornell fifth in 21:23. The freshman eight-oared event went to the Navy with Syracuse second, Columbia third, Cornell fourth and Pennsylvania fifth. Washington won the junior eight-oared race, Columbia finishing second, California third and Pennsylvania fourth.

The fifty-fifth national championship regatta of the National Association of Amateur Oarsmen of America, held at Wyandotte, Mich., was featured by the performances of Joe Wright, Jr., son of the man who has contributed so much to Canadian rowing and who had served many years as coach of the University of Pennsylvania crews. Young Wright after winning the Canadian singles title and barely missing victory in the Diamond Sculls, England, captured the association and senior singles and the quarter-mile events at Wyandotte. The winners in other events at the national championships were: senior eight-oared shells, Wyandotte B. C.; intermediate eight-oared shells, Argonaut R. C.; senior four-oared shells with coxswain, Penn B. C.; senior doubles, Bachelors' B. C.

Cambridge University repeated its recent successes over Oxford University in their annual race on the Thames. The winner's time was 20 minutes, 14 seconds.

RUBBER. The American rubber industry, depending on raw materials shipped from foreign countries, where various schemes of restriction to control the production were practiced, manifested great interest during the year in acquiring supplies of its own upon which it could depend for raw rubber. The Ford Industrial Company of Brazil, a subsidiary of the Ford Motor Company of Detroit, acquired 3,700,000 acres in the Amazon Valley on which it proposed to undertake rubber cultivation on a large scale. The Firestone Company, which in 1926 had arranged for a lease of 1,000,000 acres in Liberia, as described in the YEAR BOOK for 1926, made further progress with its rubber planting project. In Sumatra the Goodyear interests increased their plantation holdings to about 50,000 acres by an addition of 29,000 acres, so that American holdings in this island, including those of the U. S. Rubber Company and the Continental Rubber Company, together with the plantations of the Manhattan Rubber Company in Java, amounted to some 200,000 acres under development. In the Philippine Islands progress was made in furthering rubber cultivation and it was proposed to amend the land laws so as to allow ownerships of sufficient areas for the economic production of rubber. In the Southwest, the Continental Rubber Company was developing guayule growing, while in Florida Thomas A. Edison had been carrying on experiments, with 3000 rubber and near-rubber plants, for which he claimed encouraging results.

The British policy of the restriction of rubber exports continued to be widely discussed in 1927 and at the end of the year this policy, described in previous issues of the YEAR BOOK, had been in force for five years. During the first and second restriction years the new policy failed to stimulate the market price of rubber as to result in increasing the exportable allowances, but in 1925 it became possible for producers to increase production and this continued in 1926, although the regulations were changed somewhat at this time. In the meantime, the consumption of rubber had increased to a very marked degree and in the three-year period, 1925-27, the world consumption totaled 1,674,000 tons, the yearly amounts being: 1925, 553,000 tons; 1926, 541,000 tons; and 1927, about 580,000 tons.

A significant feature of recent years has been the constantly declining degree of control of the world's production of crude rubber exercised by British colonies and territories. In 1922 British possessions produced 67 per cent of the world's rubber, but this declined to 53 per cent in 1925 under the policy of restriction. In 1926, when production was practically unrestricted, the British share amounted to 59 per cent, but in 1927 it was estimated at only 54 per cent, while for 1928, if no change was manifested, the British territories were estimated to be in a position to cultivate less than 50 per cent of the world's annual rubber production. With the decline of rubber in British possessions there was corresponding increase of production in the Netherland East Indies, where Dutch native rubber had increased from 20,000 tons dry weight, produced in 1922, to about 93,000 tons in 1927. There was also an increase in the production of rubber in Indo-China and Siam, guayule rubber in Mexico, as well as of wild rubber in Brazil and Africa.

The world's production of all grades of rubber for the year 1927 was estimated at 625,000 tons, as compared with 614,000 tons in 1926. The importation of all grades of crude rubber into the United States in 1927 totaled 432,316 tons. The estimated consumption of crude rubber in the United States in 1927 was placed at 375,000 tons, while the consumption of reclaimed rubber amounted to 200,000 tons, this product finding increased use in the American rubber industry. The price of rubber in the New York market was fairly steady, compared with the downward sweep of prices in 1926. The prices of ribbed smoked sheets opened in January at 38½ cents and continued around this price or slightly above until June, when the market weakened and 35 cents was the price on June 15. Low prices continued until November, when a steady rise set in until December 1, when the market was about 40¼ cents, continuing firm until the end of the year when the market closed at 41½ cents.

During 1927 the exports of rubber goods from the United States totaled \$69,593,120 in value, or an increase of 15 per cent as compared with \$60,061,332 in 1926, and 32 per cent as compared with the 1925 figures. This advance over previous years occurred in the automotive rubber goods trade particularly and was in spite of increasing competition on the part of European manufactures and a decrease in unit prices for practically all commodities. The exports for 1927, with values, were classified as follows: automotive rubber, \$42,617,897 as compared with \$33,173,896 in 1926; footwear \$8,599,201, as compared with \$9,155,606 in 1926; mechanicals, \$6,890,175 as compared with \$6,628,946 in the previous year; and other rubber manufactures, \$11,485,847, as compared with \$11,092,884 for 1926.

The total imports of rubber and manufactures in 1927 had a valuation of \$348,967,116 as compared with \$515,957,485 in 1926. The principal item was rubber (crude, and milk of), 954,817,255 pounds, valued at \$339,874,774, as against 925,877,712 pounds in 1926, with a value of \$505,817,807; while imports of jelutong or pontianak amounted to 17,437,943 pounds, valued at \$2,448,657, and of guayule to 11,174,253 pounds valued at \$2,659,325; and other crude, scrap and reclaimed rubber, 21,497,456 pounds, valued at \$907,450.

According to the statistics compiled by the Rubber Association of America, the importations of crude rubber into the United States during the calendar year 1927 totaled 432,316 long tons, distributed as follows: Plantations, 405,543 tons; Paras, 17,576 tons; Africans, 2073 tons; Centrals, 3235 tons; guayule, 3856 tons; and Manicoba and Matto Grosso, 33 tons. On a basis of monthly importations April held the record with 48,873 tons, while February showed the smallest imports, with 27,600. In the receipts of plantation rubber for the year New York held first place with 364,170 tons, Boston second, with 16,953 tons, followed by Baltimore with 10,206 tons, Los Angeles with 8464 tons, and Philadelphia with 4919 tons.

The exports of rubber and rubber manufactures in 1927 were valued at \$68,657,874, as against \$59,205,260 in 1926.

The principal items of manufactured domestic rubber exported in 1927 were as shown in the following table:

were purchased during the year 109 locomotives, 100 freight cars, and 130 passenger cars. The number of locomotives included 130 that were received from Germany during 1926 on account of war reparations.

GOVERNMENT. Under the constitution of Mar. 28, 1923, which nationalized all forests and subsoil, executive power is vested in the King and a council of ministers, the King having a suspensive veto over the laws passed by parliament; and legislative power is vested in a senate of 170 members and a chamber of 347 members. The senate is composed of life members and various officials; the deputies in the lower house are elected by all tax-paying citizens 21 years of age. Kings in 1927, Ferdinand I (q.v.) and Michael (see below). The cabinet at the beginning of 1927 was composed as follows: Prime Minister, General Averescu; interior, M. Goga; Foreign Affairs, M. Mitileanu; Agriculture, M. Garoflid; Education, I. Petrovici; Finance, General Averescu; Labor, M. Jasi; Public Worship, M. Goldis; Justice, M. Cudalbu; Industry and Commerce, M. Berlescu; Secretary for Bessarabia, M. Nita; Secretary for Bukovina, M. Popovici; War, General Mircescu; Communications, General Valeanu; Public Health and Social Welfare, M. Lupas; Public Works, M. C. Meissner.

HISTORY. The situation in Rumania in the early months of the year was seriously complicated by the severe illness of King Ferdinand and the consequent question of his successor in case of death. Early in February the National Peasants' Party requested the government to call a Crown Council meeting for the purpose of removing the barriers against the return of Carol as heir apparent to the throne. As noted in the preceding YEAR BOOK, he renounced all his right to the throne and the heir apparent became Michael, his son, who was born Oct. 25, 1921. General Averescu stated in no uncertain tones that his government would not accede to the wishes of the Peasants' Party and that the question of succession was definitely settled. He furthermore ordered the suppression of all newspapers which advocated the return of Carol to Rumania. Whether or not this discussion concerning Carol or the foreign relations of Rumania, which are discussed under ALBANIA, ITALY, BULGARIA, and JUGO-SLAVIA, was the cause, the Averescu cabinet was requested to resign by King Ferdinand early in June. The press interpreted this move as a victory for the former premier, Jon Bratiano, whose resignation was discussed in the preceding YEAR BOOK.

A new cabinet was immediately formed under the premiership of Baron Stirbey, whose first act was to dissolve Parliament and call for new elections early in July. Baron Stirbey's stewardship was short-lived, however, since he depended for his retention of power on a coalition of the Liberal Party and the National Peasant Party. In preparation for the new elections he desired to have the two parties nominate one set of candidates. The National Peasant Party refused to stand by such an agreement and Stirbey was compelled to resign. Ferdinand turned to Jon Bratiano, the brother-in-law of Baron Stirbey and the real head of the Liberal Party, which in a sense, was a misnomer, because the Liberal Party was the most conservative in Rumania. The other members of Bratiano's cabinet were: Finance, V. Bratiano; Interior, J. Duca; Agriculture, M. Argetoianu; Education, M. Letu;

Public Worship, A. Lapedatu; Justice, S. Popescu; Health, J. Inculetz; Labor, N. Lupu; Communications, M. Aglescu; Public Works, M. Mosoin; War, General Angelescu; Commerce, M. Mrazec. Premier Bratiano took the portfolio of Foreign Affairs himself. As a result of the elections held on July 7, Bratiano gained control of four-fifths of the parliament.

On July 20, occurred the event that all Rumanians and most of the world had been expecting to hear momentarily since the beginning of the year, the death of Ferdinand I (q.v.). The death of Ferdinand immediately brought up the succession question in all its vigor. The National Peasants' Party, the strong supporters of the return of Carol, had just been severely defeated by the Liberals under Bratiano, who was firmly opposed to Carol's coronation. Of course, elections in Rumania in the past few decades had not meant much. The party in power, whether under the leadership of Bratiano or General Averescu, had always been able to do quite as it pleased with the election of members to Parliament. According to the succession law passed after the renouncement of his claims by Prince Carol, his son Michael was to attain the throne. Simultaneously with the passing of Ferdinand five-year-old Michael became King of Rumania under the control of a regency which had been created by Parliament a year and a half before. The regency consisted of Prince Nicholas, the second son of Ferdinand, the Patriarch Miron Christea, and the first president of the Supreme Court, M. Buzdugan. Two of the members of this regency were mere tools of Bratiano and, as such, would be expected to do his will.

It certainly did not seem possible in any way for Carol to return to the throne with such conditions as these. In passing, it might be said that Bratiano had practically ruled Rumania throughout the entire lifetime of Ferdinand and was hostile to Carol because he was said to listen to the anti-Bratiano parties of the kingdom. According to press reports Carol confidently hoped to be recalled to Rumania to take up the position he voluntarily renounced, but the year closed without any such call coming. Bratiano very ably saw to it that no military uprising in the country took place as a vehicle for the return of Carol.

The position of former Queen Marie was rather pitiful. It was rumored that she had hoped to be the sole regent and was extremely disappointed when this failed to materialize. She went into virtual retirement and refused audiences to any one. Needless to say many "Carolist movements" were reported in the press during the fall, and, while there may have been some truth in them, no real agitation with any chance of success was stirred up. Rumors were also rife that the regency was causing Bratiano considerable trouble, but, outwardly at least, he had the situation well in hand and ruled with as much power as Mussolini exercised in Italy.

Just as Bratiano seemed to have completely tightened his hold on Rumania he was stricken by the hand of death on November 24. As intimated above, Bratiano had been the "man behind the throne" in Rumania during the entire reign of Ferdinand. During his reign, Bratiano had been Prime Minister eleven times. There was no period of political unrest following his death, however, because the premiership was

KING MICHAEL
Became King on Death of His Grandfather

RUMANIA

turned over to his brother, Vintila Bratiano. He immediately squelched any attempt at revolution by stating, "Tell the people that, whatever may befall Rumania because of my brother's death, there can be no revolution, no serious disturbances, no change in the constitution or the regency. Our people are by temperament too philosophic, too hard-working, too obedient to constituted authority, to be interested in revolutionary ideas." While former Prince Carol watched events from his seclusion in France, Vintila Bratiano declared that his return was just as remote as it had ever been. See BRATIANO, JON.

For a discussion of the anti-Semitic outbreaks throughout the country during the year consult the article JEWS.

RUSSELL, THE RIGHT REV. WILLIAM T. American Roman Catholic bishop, died in Charleston, S. C., on March 18. He was born in Baltimore, Md., on Oct. 20, 1863, and was educated at Loyola College and St. Mary's Seminary, Baltimore; the Catholic University in Washington, and the American College in Rome. After being ordained a priest in 1889 he was pastor of St. Jerome's Church at Hyattsville, Md., until becoming secretary to the late Cardinal Gibbons in 1894. He served in that position until 1908 when he went to Washington to be rector of St. Patrick's Church. In March 1917 he was consecrated Bishop of Charleston, and he was created a domestic prelate to Pope Pius X in 1911. His published work, *Maryland, the Land of Sanctuary* (1907) gained Bishop Russell much recognition as a historian. He was a member of the American Historical Association and the Maryland Historical Society.

RUSSELL SAGE FOUNDATION. An institution established by Mrs. Russell Sage in memory of her husband. The endowment was \$10,000,000, to which \$5,000,000 was added by will. It was incorporated by an act of the Legislature of New York in April, 1907, for "the improvement of social and living conditions in the United States of America." The Foundation does not relieve individual need but studies and interprets facts with regard to social conditions and methods of social work, makes the information available by publications, conferences and other means of public education, and seeks in these and other ways to stimulate action for social betterment. The Trustees of the Foundation are: Robert W. de Forest, president; Lawson Purdy, vice president and treasurer; John M. Glenn, secretary and general director; Frederic A. Delano, John H. Finley, Mrs. Frederic S. Lee, Dwight W. Morrow, Mrs. Finley J. Shepard and Harold T. White.

The work of the Foundation is carried on through departments whose titles and directors are as follows: Charity Organization, Mary E. Richmond; Industrial Studies, Mary van Kleeck; Publication and Library, Frederick W. Jenkins; Recreation, Lee F. Hammer; Remedial Loans, Leon Henderson; Statistics, Ralph G. Hurlin; Surveys and Exhibits, Shelby M. Harrison, who is also vice general director of the Foundation. A consultation service on problems of delinquency and penology is under the direction of Hastings H. Hart.

The aim of the Charity Organization Depart-

ment is to study and publish in the field of social case work and family welfare. In recent years the department's attention has been directed chiefly toward the laws governing marriage and their administration. The department continued its interest in child marriages, a subject on which it published a book in 1925. It was noteworthy that several states, including Pennsylvania, New York, Minnesota and Connecticut, passed laws during the year intended to prevent or discourage too early marriages. A book on marriage and the state, and a manual of statutes and case decisions bearing on marriage were being prepared by the department.

During the year a French edition of Miss Richmond's book *What is Social Case Work?*, translated by Dr. René Sand, was published; also the reports of two studies, *Securing Employment for the Handicapped*, published by the Welfare Council of New York, which resulted in the establishment of a Joint Employment Bureau for the Handicapped in New York City, and *Postponing Strikes*, an account of 18 years' experience in Canada under the Industrial Disputes Investigation Act. The latter study, which was made for the light it might throw on the problem of strike prevention in the United States, revealed that the act has been administered so as to bring in the good offices of the government as an agency of conciliation in industrial disputes, and that, administered in this way, it has been notably successful.

The work of the Department of Industrial Studies is to investigate industrial conditions in order to discover facts which may be a guide for public opinion and a basis for constructive action to improve conditions of work and industrial relations. The Department of Recreation aims to assist in bringing about adequate provision for all forms of wholesome recreation by studying the best methods of promotion, organization and administration of recreation facilities and encouraging their adoption.

Miss van Kleeck continued to serve as chairman of the Committee on Governmental Labor Statistics, appointed by the American Statistical Association. The Department of Statistics makes statistical investigations relating to social conditions. It also reviews all statistical material intended for publication by the Foundation.

As Secretary of the Committee on Governmental Labor Statistics of the American Statistical Association, Mr. Hurlin directed the preparation of a report on methods of compiling employment statistics which was published during the year by the Foundation under the title, *Employment Statistics for the United States*. The Report holds that for the prevention of the distress from unemployment in times of business depression, to which large groups of workers are periodically subject, comprehensive current information on the trend of employment is needed.

The aim of the Department of Remedial Loans is to conduct a campaign of education for the protection of small borrowers from extortion, to urge the passage and enforcement of adequate laws for the regulation of the small loan business, and to encourage the formation of credit unions. The uniform small loan law prepared by the Foundation and now in force in 24 states, was adopted during the past year by Missouri and Wisconsin. Campaigns for its adoption failed in three other states: Minnesota, Kansas

and Alabama. Bills introduced for the repeal of the Uniform Law failed of passage in Virginia, West Virginia, and Tennessee, the only states where such attempts were made. The constitutionality of the law was sustained by court decisions in Colorado and Virginia. In addition to extending the uniform law and assisting in its administration the department continued its efforts to encourage credit unions as a practical and constructive means of meeting the need for small loans.

The Department of Surveys and Exhibits aims to study and develop the social survey as an aid in community improvement, and to study and develop exhibits and other methods of presenting information about social conditions and social work to the public. A book on *Publicity for Social Work* has been completed and published.

Further study was made of maintenance of Federal prisoners in county jails; comprehensive studies were also made of the jail system in the State of New Jersey and of the prisons in New York City; the jails of Tacoma and Seattle, Washington, were inspected, and advice was given in regard to many local projects for the construction of new penal institutions and for the reconstruction of old ones. A brief inquiry was conducted on the subject of prison industry.

The Library of the Foundation is open to all who are interested in social welfare. During the fiscal year ending Sept. 30, 1927, the attendance of readers and others reached the total of 23,300. The number of books circulated for use outside of the Library was 18,721. Six numbers of the bi-monthly bibliographical bulletin were issued on the following subjects: (1) Labor banks; (2) State boards of administration, control, charities and correction, public welfare, et cetera; (3) Crime prevention and repression; (4) Books on social subjects published in 1926; (5) Adult education; (6) Employment for the handicapped. In addition, the Library, in response to requests, prepared 195 typewritten bibliographies on various social topics. The Library contained about 27,000 bound volumes and 92,000 pamphlets.

The Foundation continued its financial support of the Regional Plan of New York and Its Environs during the past year. The final report, including a plan for the harmonious development of the region will, it is expected, be completed within a year. Three new publications were issued during 1927: *Planning the New York Region*, the third report of progress issued by the Plan, includes as one of its most important features a statement of the general principles upon which the final plan is to be based; *Land Values*, distribution in the New York region and its relation to various factors in urban growth, gives a comprehensive view of changes in values of real estate in Manhattan and in other sections of the region; *Retail Shopping and Financial Districts* is the final monograph in the economic series and deals with the present and future location and space requirements of these two important elements of the city. A notable increase in interest and activity in city planning took place during the year throughout the region. One indication of this was the appointment of 18 new city planning commissions, bringing the total number in the region up to 50. A county planning federation in Westchester

was also organized. In many of these developments the regional plan staff were of assistance. The Committee on Regional Plan cooperated on numerous occasions with the New York City Committee on Plan and Survey.

RUSSIA. A republic comprising the greater part of the former Russian Empire; officially entitled the Union of Soviet Socialist Republics. Capital, Moscow.

AREA AND POPULATION. According to the Soviet Union Information Bureau, which supplied much of the material used in this article, the area of the Union of Soviet Socialist Republics was 8,200,000 square miles at the close of 1927. The population, according to the census of 1926-27, was 140,304,933. This is an increase of 15,000,000 in the past six years and is several millions larger than the population of the same territory in 1913. The gain in population is attributed largely to the steady reduction in the death rate, particularly from epidemic diseases. The death rate in Moscow in 1926 was 13.4 per thousand. The rural districts had yielded results more slowly to the public health campaign. Of the total population, 82 per cent was rural and 18 per cent urban. The number of unemployed (as of Oct. 1, 1927) was 1,127,000.

The Union of Soviet Socialist Republics is composed of six constituent republics with their respective populations, as follows: Russian Socialist Federated Soviet Republic, 100,593,870; White Russian Soviet Socialist Republic, 4,924,624; Ukrainian Soviet Socialist Republic, 28,887,007; Transcaucasian Federation, 4,395,161; Uzbek Soviet Socialist Republic, 5,058,161; Turkoman Soviet Socialist Republic, 1,030,549. The Russian Socialist Federated Soviet Republic contains 76 per cent of the population of the Union and 94 per cent of the area. It contains eleven autonomous republics, twelve autonomous areas and two autonomous districts and three regions ("oblast" or "krai"), with further subdivisions into provinces, counties, districts, and townships. The other constituent republics embrace similar subdivisions of autonomous republics and areas, along racial or national lines.

The census showed a strong trend of population to the cities, in line with the industrialization of the past few years. Since the urban census of 1923 Moscow and Leningrad had each increased their population by over 500,000. Other large cities had gained an average of 30 per cent in population in the three years. Population of the principal cities, census of 1926-27: Moscow, 2,019,453; Leningrad, 1,616,118; Kiev, 493,873; Baku, 446,832; Odessa, 411,416; Kharkov, 409,505; Rostov-on-Don, 304,812; Tashkent, 312,811; Tiflis, 282,918.

EDUCATION. Public education in the Soviet Union is a charge against the six constituent republics and against the localities concerned. Local appropriations are in the aggregate somewhat larger than those of the republican governments. Total appropriations for education were \$344,535,000 in 1926-27 as compared with \$287,370,000 in 1925-26. It was officially stated that the percentage of literate persons in the population in 1927 was 44.5 as compared with 35.5 per cent in 1920, an increase of nearly 30 per cent in seven years. Between 65 and 70 per cent of the children of school age were reported in schools in the spring of 1927, and universal

compulsory education was predicted by 1933. In 1926-27 the number of common schools was 106,729 with 9,800,000 pupils, as compared with 104,610 schools and 7,200,000 pupils in 1914-15. The number of pupils in secondary schools in 1926-27 was 783,000, as compared with 564,000 in 1914-15. At the close of 1926 there were 46,759 "stations for eliminating illiteracy" with 1,515,069 pupils. Of these 88 per cent were in the villages. It was stated that during the previous five years 5,300,000 persons, mostly adults, had been taught to read and write in such stations. Enrollment in vocational institutes was reported as 102 per cent greater than in 1914-15 and in higher educational institutions, 48.8 per cent greater.

PRODUCTION, ETC. Land and natural resources are held in trust by the government for the general population, and may not be acquired by private title. Every citizen is entitled to secure land for cultivation, the form of tenure being that of perpetual leasehold. Natural resources are exploited by state trusts, by mixed companies, under concession, in which the state has a participating interest; or by private companies under concession. Such private concessions run for a limited time (generally 15 years). The transport system, and the posts, telephones, and telegraphs, are operated as government departments. Industry is conducted largely by state trusts. Private factories employing not over 20 persons may operate without formality. For enterprises employing 21 to 100 persons permission of local authorities is required, and for larger enterprises a special leasing or concession agreement from the government is necessary. Many industrial enterprises are conducted by the cooperatives.

Reports of the harvest received late in 1927 indicated a grain crop of about 73,200,000 metric tons, as compared with 74,385,000 metric tons in 1926. Total pre-war production in the same territory is estimated at about 75,000,000 metric tons. The cotton crop of 1927 was estimated at about 900,000 bales as compared with 760,000 bales in 1926 and a five-year pre-war average of 953,000 bales. The sugar beet crop of 1927 was estimated at 9,500,000 tons as compared with 6,300,000 tons in 1926 and 10,230,000 tons in 1913. The other technical crops in the Soviet Union were substantially above the pre-war level. In 1927 the number of horses was 29,000,000, cattle, 66,000,000, and swine, 22,000,000. All livestock except horses were above the pre-war figure. In the fall of 1927 there were 30,000 tractors in use, compared with 22,500 in the fall of 1926 and 500 in 1913. The total sown area in 1927 was about 256 million acres, as compared with 265 million in 1913. During the agricultural year 1926-27, ending June 30, 1927, grain exports were 3,068,000 metric tons, as compared with 2,643,800 tons in 1925-26.

The industrial output for 1926-27 (fiscal year ending September 30) was 18 per cent above 1925-26 and above the pre-war level for the first year since the revolution. In 1921 the monthly output was less than 15 per cent of that of 1913, and the recovery was particularly rapid during the past three years. The only large-scale industries still below the pre-war level in 1927 were the metal industry and ore mining. In the fall of 1927 it was announced that \$809,754,840 had been allotted for capital improvements in State industry in 1927-28, 19 per cent more

than in 1926-27. The funds are derived from profits, depreciation account, and government budget appropriations. One-quarter of the allotments were to go for construction of new plants. The figures do not include governmental appropriations of \$75,000,000 for the development of the regional electric power system. The number of workers employed in State industry was 2,012,000 in July, 1927, as compared with 1,901,227 in July, 1926.

The total ascertained coal deposits in the Soviet Union were estimated at 428,300 million metric tons. Production in 1926-27 was 30,940,000 tons as compared with 24,389,000 tons in 1925-26 and 28,356,000 tons in 1913.

Oil production for the fiscal year ending Sept. 30, 1927, was 10 per cent above 1913 and oil exports more than doubled the figure for 1913. Production was 10,814,000 tons, as compared with 8,142,000 tons in 1925-26 and 9,215,911 tons in 1913. Exports were 2,038,000 metric tons, as compared with 1,473,150 in 1925-26 and 914,032 in 1913. The increase in production for the year was 25 per cent, as compared with 1925-26, and in exports 38.4 per cent. New drillings for the year were 1,229,344 feet, as compared with 936,500 feet in 1925-26. Drillings in 1913 were 990,300 feet. During 1926-27 the sum of \$95,481,000 was spent on capital improvements in the industry and the sum of \$95,326,500 has been allotted for the fiscal year 1927-28.

During 1927 several contracts for marketing Soviet oil in the Near East were announced between the Neftsyndicat (Soviet Oil Syndicate) and the Standard Oil Company of New York. They run for several years and aggregate 312,000 tons of oil annually. Similar contracts with the Vacuum Oil Company bring the total of oil furnished to these two American companies to about 430,000 tons a year. Soviet oil production in 1927 passed the Mexican production for the first time in 25 years and was second only to that of the United States. The oil reserves of the country are the largest in the world. At a conservative estimate they are figured at 2,000,000,000 metric tons, though this does not include a number of regions as yet inadequately investigated.

The Soviet textile industry increased its output from 15 to 20 per cent in various branches during 1926-27, and the production was materially above the pre-war level. The cotton industry turned out 274,000 metric tons of yarn as compared with 243,000 in 1925-26, and 2,324,000,000 meters of finished goods as compared with 2,019,070,000 meters in the previous year. The woolen industry turned out 39,200 metric tons of yarn as compared with 32,900 in 1925-26. The linen industry produced 67,400 metric tons of yarn as compared with 64,800 in 1925-26. During 1927-28 the sum of \$101,182,050 was allotted for capital improvements in the textile industry, as compared with \$75,138,500 in 1926-27.

The metal industry of the Soviet Union increased its output by 100 per cent in 1924-25, by an additional 62 per cent in 1925-26, and by 26 per cent in 1926-27. In 1926-27 the output of metals was 77 per cent of that of 1913. Production of agricultural machinery and of several kinds of technical machinery was far above the pre-war level. The statistics of iron and steel production, in thousands of metric tons are shown in the following table:

IRON AND STEEL PRODUCTION, RUSSIA

	1926-27	1925-26	1913
Pig iron	2,973.8	2,202.6	4,206
Martin steel	3,551.5	2,910.9	4,247
Rolled iron	2,723.9	2,240.9	3,509

Announcement was made in the fall of 1927 that plans were under way for a large expansion of gold mining. American equipment was to be largely used. Individual producers and private concessionaries were to be encouraged in the gold fields. The known gold resources of the country were estimated at close to 3000 metric tons. Production was about half pre-war. The platinum industry, which virtually ceased during and after the period of civil wars, was in process of a similar restoration. Before the war Russia had virtually a monopoly of production.

COMMERCE. The foreign trade turnover over all frontiers is shown in the following table:

1913.....	\$1,490,495,000
1922-23.....	199,800,000
1923-24.....	434,910,000
1924-25.....	666,925,000
1925-26.....	733,130,400
1926-27.....	762,869,500

Exports for 1920-27 increased 15 per cent, as compared with 1925-26, and imports decreased 8 per cent. The increase in exports included a gain of 30 per cent in value in the export of grain products and of 20 per cent in value of oil products. The favorable balance of trade for 1926-27 was \$28,688,500, as compared with an unfavorable balance of \$45,320,000 for 1925-26.

The principal exports (European frontiers) are shown in the following table:

	1926-27		1925-26	
Products	Metric tons	Rubles	Metric tons	Rubles
Grain				
products	2,226,800	204,970,000	2,048,800	156,011,000
Oil products				
cotton	2,005,100	82,818,000	1,422,800	69,487,000
furs	2,700	80,318,000	2,000	63,220,000
Timber	2,132,200	70,263,000	1,666,700	52,080,000
Butter	30,800	34,224,000	27,200	30,850,000
Eggs	586,430	23,954,000	41,400	23,629,000
Manganese ore	784,700	24,090,000	678,000	21,285,000
Oil cakes	845,900	22,251,000	400,100	23,673,000
Flax and tow	41,800	19,266,000	69,600	44,782,000
Casings	2,800	9,664,000	2,500	9,280,000
Sugar	69,600	9,114,000	1,800	176,000
Poultry	9,300	7,112,000	4,200	2,936,000
Bristles	1,200	6,709,000	1,500	10,279,000
Seeds	31,100	4,152,000	141,800	14,181,000
Caviar	1,200	3,502,000	2,900	5,831,000
Hemp	1,800	253,000	7,000	2,297,000

* cases.

The principal imports are raw cotton, industrial machinery, agricultural machinery including tractors, non-ferrous metals, leather, wool, tea, and paper.

During the fiscal year 1926-27 the foreign trade turnover on the European frontiers was as follows: Exports, 678,200,000 rubles, imports, 623,800,000 rubles, total, 1,302,000,000 rubles (\$870,530,000).

The figures for American-Russian trade by Soviet customs statistics, are as follows:

	Exports to United States	Imports from United States
1913.....	\$7,290,000	\$40,780,000
1923-24.....	4,877,500	49,955,000
1924-25.....	14,471,500	103,618,000
1925-26.....	15,759,000	62,881,500
1926-27.....	13,285,500	74,953,100

The principal Soviet imports from the United States for two fiscal years follow:

	1926-27	1925-26
Cotton	\$42,372,366	\$31,394,709
Industrial equipment	6,932,526	6,365,622
Agricultural machinery	5,451,338	8,665,879
Metals	5,211,287	2,282,713
Chemical products	885,017	633,382
Binder twine	757,920	184,951
Automotive equipment	784,047	1,462,964
Typewriters, adding machines	443,659	569,848

The principal Soviet exports to the United States are furs, manganese, precious metals, sheep casings, flax and tow, hides and skins, bristles, and licorice root.

FINANCE. By the end of June, 1924, Soviet currency was established on a gold basis, and since that time there have been no unsecured paper issues. The budgets of Soviet fiscal years, ending September 30, in million of rubles (1 ruble equals \$515) were as follows:

	1923-24 (actual)	1924-25 (actual)	1925-26 (actual)	1926-27 (estimated)
Revenues	2,298.1	2,905.1	8,900.7	5,071.5
Expenditure	2,298.1	2,875.6	3,867.8	5,002.4

Expenditures for 1926-27 include 100,000,000 rubles set aside as a reserve fund. The details of the revenues for 1926-27 in millions of rubles was as follows:

Direct taxation	887.6
Excise and customs	1,358.8
Stamp duties	167.0
State properties and undertakings	598.7
Posts and telegraph	155.9
Transportation	1,498.3
State loans	307.6
Sundry receipts	97.6
Total	5,071.5

The currency in circulation on Oct. 1, 1927, was 1670.8 million rubles, compared with 1343.1 on Oct. 1, 1926. The internal debt of the Soviet Union as of Oct. 1, 1927, amounted to 927,300,000 rubles (\$477,599,500), as compared with 662,700,000 rubles on Oct. 1, 1926. The retail price index as of Oct. 1, 1927, with price of 1913 taken as 100, was 198, as compared with 208 on January 1. The wholesale price index was 170, as compared with 177 on January 1. The balance sheet of the State Bank as of Oct. 1, 1927, showed liabilities and assets of 3,863,100,000 rubles. The capital was 250,000,000 rubles, having been increased by 150,000,000 rubles during the year. Deposits and current accounts were 1,292,900,000 rubles, an increase of 169,800,000 rubles during the year. Assets of bullion, coin, precious metals, and foreign currency were 209,900,000 rubles, an increase of 46,500,000 rubles during the year.

The Federal government planned to spend \$75,000,000 for hydro-electric power development in 1927-27, as compared with \$50,000,000 in 1926-27. Nearly a score of regional power plants ranging from 20,000 to 65,000 kilowatts capacity have been built in the past four years. In the spring of 1927 work was begun on the Dnieper River power project which will have an ultimate capacity of 455,000 kw., the largest hydro-electric plant in Europe. It will cost \$60,000,000 and take five years to build. Colonel

Hugh L. Cooper, builder of Muscle Shoals, in Alabama, was chief advisory engineer for the project.

RAILWAYS. In 1927 the railway mileage of the Soviet Union was close to 47,500 miles, as compared with about 36,000 miles in 1913 and 42,000 miles in 1917. In 1925-26 the revenues were 1,280,000,000 rubles and expenditures 1,379,000,000 rubles, giving a net deficit of 99,000,000 rubles (about \$50,000,000). Included in the expenditures were construction of 856 miles of track. About 1400 miles of new line were built during 1926-27. Average daily freight car loadings for 1926-27 were 27,300 as compared with 17,400 two years before. New locomotives built in Soviet plants during 1926-27 numbered 441, compared with 118 the previous year.

GOVERNMENT. A description of the constitution of the Union of Soviet Socialist Republics will be found in the YEAR BOOK for 1923. At the close of 1927, the Council of People's Commissars, the executive cabinet of the Soviet government, was composed as follows: Chairman of the Council of People's Commissars, Alexis I. Rykov; vice chairmen of the council, A. D. Tsiurupa, J. E. Rudzutak, and V. V. Kuybyshev; commissar for army and navy, K. E. Voroshilov; for trade, A. I. Mikoyan; for foreign affairs, George Tchitcherine; for transportation, J. E. Rudzutak; for posts and telegraphs, I. N. Smirnov; for finance, N. P. Briukhanov; for labor, V. V. Schmidt; for peasants' and workers' inspection, G. K. Orjonikidze; chairman of the Supreme Economic Council, V. V. Kuybyshev; Director of Central Statistical Administration, V. V. Obolensky (Ossinsky); Chairmen of the central executive committee of the Soviet Union, M. I. Kalinin, G. I. Petrovsky, A. G. Chervyakov, Gazanfar Mussabekov, Netyrbay Aitakov, Faizulla Khodzhaev. These chairmen of the Central Executive Committee are the presidents of the six constituent republics.

HISTORY

FOREIGN RELATIONS. The year was a very difficult one for Soviet Russia from the point of view of relations with the larger western European Nations. The rupture with Great Britain, the recall of the Soviet Ambassador to Paris, and the assassination of the Russian Ambassador at Warsaw all conspired to unsettle the republic's dealings with those countries, which Stalin and his advisers seemed intent on keeping in a peaceful and helpful mood. Of course there are two sides to every question and it all depends on the individual's outlook on political science as to whether he agrees with Russia in the controverted matters or with the nations with which she became embroiled. The Soviet government placed the burden of all her troubles on "oil." In a review of "Ten Years of Soviet Foreign Policy" published in the November-December issue of the *Soviet Union Review*, the following paragraphs express the Soviet's attitude toward the events of 1927. The other side will be presented immediately after:

By 1926 it appeared on the surface that relations with the larger western nations were greatly improved. In Germany, early in 1926, a 800,000,000-mark credit for Soviet trade was established under the auspices of the German Government. In Britain the credit situation for trade showed steady improvement. The exposure of the anti-Soviet forgery mill conducted by Druzhelovsky in Berlin had cleared the atmosphere of a number of sturdy misapprehensions. The campaign of hostile lies

from émigré and other sources seemed somewhat abated. It appeared that the Soviet Union was entering upon an era of more normal relationship with other countries.

Towards the end of the year negotiations were in progress concerning the marketing of Soviet oil in foreign countries, between representatives of the Soviet Oil Syndicate and representatives of foreign oil interests. Formulas were being worked out for the distribution of the Soviet product. In this connection an agreement was reached, accepted by the foreign companies, covering "compensation" for foreign claimants of Russian oil lands.

The conferences broke early in January 1927 when Sir Henri Deterding, representing Royal Dutch-Shell, insisted upon a monopoly of Soviet oil export and a limitation on Soviet exports of crude oil.

Thereafter began a campaign against the use of Soviet oil in England and a series of sharp attacks on the Soviet Union in a section of the British press. The situation was aggravated by irritation in certain circles in Britain over Nationalist successes in China. The attacks increased in intensity. In May came the Arcos raid and the breaking of relations by the Baldwin Government.

In the summer the newspapers reported that Sir Henri Deterding and certain foreign associates were seeking a monopoly for oil distribution in France, where Soviet oil sales had made heavy gains in the past few years. Sir Henri Deterding's effort failed. Thereafter, in certain French newspapers, was started a heavy barrage of attacks against the Soviet Union, curiously similar to the attacks in the British press following Sir Henri's failure to secure a monopoly of Soviet oil export. The attacks spread. An announcement from Moscow that an agreement had virtually been reached for the funding of the czarist debts contracted in France seemed to stir the die-hards to more frantic efforts to break relations. In October the French Foreign Office requested the recall, as persona non grata, of Mr. Rakovsky, the Soviet Ambassador who had conducted the difficult debt negotiations for a long period. A new Soviet Ambassador has since been appointed.

Thus after ten years the economic and diplomatic blockades sporadically continue. There has been a revival throughout the world of slanderous and absurd stories about the Soviet Union. Sir Henri Deterding has recently launched in the United States a publicity campaign against the Soviet oil industry.

In any summary of Soviet foreign relations it would be absurd to ignore these tendencies or underestimate their sinister significance. There is no indication that events will force the Soviet Government to defect from its policy of building up peaceful and cooperatively profitable relations with other countries. Its responsible spokesmen have often expressed the country's willingness to make notable concessions in order to assure itself the opportunity to develop its national life along the new lines, but the time has gone past when foreign interests, by threats or with the aid of diplomatic pressure, can secure control of vital natural resources held in the name of the entire people of the Soviet Union. The country, from its own effort, is now a going concern. Productivity has passed the pre-war level. The three great oil fields in particular are in better shape, physically and economically, than before the war, and their output during the past fiscal year was 10 per cent greater than in 1913. It would appear that the people of the Soviet Union are justified in taking the view that in the long run the size and richness of their country, along with their own orderly development, must outwear the hostile attacks, and that time is on the side of patience and constructive effort.

Whether the trouble was "oil" or not, the difficulties with Great Britain began shortly after the beginning of the year. The Baldwin government was seriously disturbed over the aid given by Russian trade unions to the general strike in England and could scarcely look with unconcern upon the Communistic activities in China which threatened her lives and property there. Late in February the British government sent a note to Moscow complaining of propaganda in the British Isles as against the provisions under which the Soviet government had been recognized. It specifically noted remarks by prominent members of the Russian government and acts by Soviet agents in China which were inimical to British interests there. The British note ended with the threat that if such acts as complained of were continued the trade agreement and even diplomatic relations would be

broken off. The Soviet reply to London stated that it was surprised at the feeling expressed by the British note and disclaimed any hostile propaganda and demanded proof of such. The note also stated that in 1923 the British government promised to notify Moscow of any violations of the trade agreement and that up to the present no such notification had been sent to it. The note also hinted that the breaking of relations between the two countries would hurt Great Britain as much as it would Russia, and that Russia was waiting for definite proof of any breach of the agreement of 1923.

The British government did not directly reply to the Soviet note, but on May 12 made a spectacular raid on the headquarters of Arcos, Ltd., the trade organization of the Russian cooperative societies, as well as of the Soviet trade delegation. The impelling motive as given out by a member of the cabinet was that certain government documents containing military secrets had been stolen and traced to the Russian headquarters. The government admitted that the lost papers were not found, but stated that other documents were seized which justified the raid. About a week later the Russian government bitterly protested the act on the grounds of immunity granted under the trade agreement of 1921. The Russian broadside also intimated that the raid was "a most hostile act, without doubt jeopardizing the further preservation of relations between the interested states."

The Russian note was followed by several days' debate in the House of Commons, during the course of which Prime Minister Baldwin gave several instances of Soviet hostile acts against the British interests, not only at home but abroad. The result was the severance of relations with Russia by a vote of 367 to 118, the Laborites and some of the Liberals refusing to join in the resolution.

Supporting the action of his government, Mr. Baldwin issued the following statement:

Our decision was not the result of a deep-laid plot to get up a world combination against Russia. On the contrary, as the Foreign Secretary said, we refrained for a long time from breaking with Moscow out of consideration for our Continental allies and friends. But the Soviet made it impossible for us to maintain that attitude by their refusal to listen to our repeated warnings. It is part of their propaganda to represent our policy as one which aims at war and which is based on forgery. I wish, therefore, to state emphatically that our rupture of diplomatic relations does not in any way mean or imply war against Russia.

While the Russian leaders were considerably disturbed by the British decision, it was quite apparent that they did not want war. The consensus of opinion in Soviet circles was that the documents produced by Mr. Baldwin were forgeries and that Great Britain took this step to show her resentment against the failure of her policy in China and her inability to get a monopoly of Russian oil. The British government made it clear that trade with Russia could go on as before the signing of the trade agreement, but without the vehicle of diplomatic or trade relations. In this connection it is interesting to note that, according to the United States Bureau of Foreign and Domestic Commerce, the trade between the two countries was hardly ruffled by the break in relations.

For the crisis with Poland that occurred just about this time consult the article on POLAND,

History. The Rakovsky incident is treated in FRANCE, *History.*

DOWNFALL OF TROTSKY. The difficulties of the Stalin government with foreign countries served as a means of bringing to the fore the opposition group led by Trotsky and Zinoviev. Trotsky, who from the beginning had resented the Stalin "idea" of a semi-capitalistic state, declared that he and his followers were opposed to any such union with the bourgeois Nationalists of China as the Communists had carried out, but were unalterably for the proletariat of the earth and favored the world revolution now rather than waiting for the capitalist states to disintegrate. Trotsky also declared that Stalin, by his control over the Communist party, was weaning that party away from the principles of Lenin and was gradually evolving a capitalistic state. The upshot of the entire matter was the expulsion of Trotsky and Zinoviev from the Central Executive Committee of the Communist party for "factional activity and indiscipline."

According to reports that came from Moscow the news of Trotsky's expulsion was taken very calmly and caused virtually no excitement. In some quarters it was felt that if Trotsky remained absolutely quiet perhaps some sympathy for him and his cause might appear among the Communists. But when the expulsion occurred it was quite evident that the vast majority of the Communist party concurred in the decision. The Congress of the Communist party which met in December upheld the expulsion of Trotsky and his followers from the party. Consult article on LEAGUE OF NATIONS.

RUST. See BOTANY, under *Plant Diseases.*

RUTGERS UNIVERSITY. A non-sectarian institution of higher education at New Brunswick, N. J.; founded under the name of Queen's College, in 1766. The University consists of the following colleges: Arts and sciences, engineering, agriculture, school of education, college for women. The registration for the autumn term of 1927 was 2295, of whom 1020 were women, registered at the Women's College. The 1927 summer session had an enrollment of 1343. Of the 231 members on the faculty 149 were professors and 82 instructors. The endowment funds, etc., amounted to \$3,574,000, and the income for the year to \$900,000. The library contained 143,000 volumes. During the year a new physics building for the colleges for men, and a recitation hall for the Women's College, were constructed. President, John M. Thomas, D.D., Litt.D., LL.D.

RYE. The 1927 production of rye in twenty-five countries sending estimates to the International Institute of Agriculture, Rome, was 890,475,000 bushels as compared with 781,845,000 bushels in 1926. This increase represented 13.9 per cent more than the production in 1926 and 4.8 per cent more than the average yield for the five years 1921-25. The estimated yields of the leading rye producing countries reporting were as follows: Germany 286,271,000 bushels, Poland 234,943,000 bushels, Czechoslovakia 48,937,000 bushels, France 36,799,000 bushels, and Spain 27,074,000 bushels. In the crop year 1926-27 Argentina produced 3,268,000 bushels and Brazil 646,000 bushels. The Soviet Republics reported a production of 901,599,000 bushels for 1926, an increase of nearly 25,000,000 bushels over the yield in 1925. The

rye acreage of the reporting countries in 1927 was only 1.4 per cent above that of the preceding year and practically the same as the average for the five years 1921-25. The Canadian production in 1927 was placed at 16,071,000 bushels, which was nearly one-third more than was harvested in 1926.

The United States in 1927, as reported by the Department of Agriculture, produced 58,572,000 bushels on 3,670,000 acres, or at the rate of 16 bushels per acre. In 1926 the corresponding figures were 40,795,000 bushels, 3,578,000 acres, and 11.4 bushels. The average farm price on Dec. 1, 1927, was 85.3c. per bushel as compared with 83.4c. the year before, and at these prices the total value of the crop was \$49,945,000 and \$34,024,000 for the two years respectively. The large crop of 1927 was marketed quite rapidly at prices slightly higher than in recent years. Up to the middle of September nearly 10,000,000 bushels had been received at the principal markets, as against about 5,000,000 bushels for the same period in 1926, and about 6,000,000 bushels in 1925. Of the thirty-five states reporting the following led in production: North Dakota, producing nearly 40 per cent of the total crop, 23,063,000 bushels, Minnesota 7,485,000 bushels, Nebraska 4,110,000 bushels, Wisconsin 4,046,000 bushels, and South Dakota 2,772,000 bushels. The average farm price on Dec. 1, 1927, ranged from 69c. per bushel in Wyoming to \$1.75 per bushel in South Carolina. In thirteen states, mostly eastern and southern, this price was over a dollar. For the year 1927, the United States exported 35,941,115 bushels of rye and 38,400 barrels of rye flour, as compared with 11,940,984 bushels of grain and 15,667 barrels of flour for the preceding year.

SAAR BASIN, *zür.* According to Article 45 of the Treaty of Versailles, this section of Germany was awarded to France for the purpose of exclusive exploitation of the coal fields, in compensation for the destruction of the coal fields in northern France by the German armies. The treaty provided that for 15 years the Saar Basin should be governed by a commission of five appointed by the League of Nations, and that after that period the population should decide on one of three courses; namely, the administration set up by the treaty, union with France, or union with Germany. Area, 751 square miles; population, about 657,870.

SACCO-VANZETTI CASE. A murder prosecution extending over seven years and resulting in the execution by the State of Massachusetts, Aug. 23, 1927, of the two defendants, Nicola Sacco and Bartolomeo Vanzetti, in the face of protests from many parts of the world. The protests, among the most widespread ever made against a criminal proceeding, rested on belief that the defendants, on account of their known radical affiliations, had failed to receive their full legal rights to a fair trial.

At South Braintree, Mass., Frederick A. Parmenter, paymaster of the Slater & Morrill shoe factory, and Alessandro Berardelli, a guard accompanying him, were murdered on Apr. 15, 1920, and robbed while conveying cash to the amount of \$15,776. On May 5, three Italians, seeking to remove an automobile owned by one of them from a garage at West Bridgewater, Mass., aroused suspicion, and two of them, proceeding later to Brockton by trolley car, were

arrested while on their way to conduct an anti-capitalist meeting among some workers there. These two men were Sacco and Vanzetti, both natives of Italy, who had emigrated to the United States in 1908. Sacco was a shoe worker and Vanzetti a fish peddler and worker at odd jobs. Previous to the South Braintree murder there had been an attempt at robbery of a pay truck at Bridgewater, on Dec. 24, 1919. As a participant in the Bridgewater crime, Vanzetti was brought to trial at Plymouth, Mass., identified by several witnesses, convicted Aug. 16, 1920, and sentenced to prison for from 12 to 15 years by Judge Webster Thayer.

Sacco and Vanzetti together were indicted, Sept. 11, 1920, for the South Braintree murders. Fred H. Moore, a lawyer with extensive experience in the defense of criminal cases involving labor agitators, undertook to act as counsel for the indicted men. A Sacco-Vanzetti Defense Committee was formed, and enlisted the sympathy of liberal and labor publications at home and Socialist and anarchist journals in Europe and South America. The trial, originally set to open Feb. 5, 1921, at Dedham, before Judge Thayer, was postponed at the request of the defense, to May 31, 1921. Vanzetti was identified by two witnesses as one of the men in the robbers' automobile. In his own testimony he told of selling fish to persons at Plymouth on the day that the murder occurred at South Braintree. Eleven witnesses supported his testimony on this point. The prosecution maintained that a pistol later found on Vanzetti was identical with the one that Berardelli, the murdered guard, had carried. Two women workers at the Slater & Morrill shoe factory identified Sacco as one of the men whom they had seen escaping in an automobile immediately after the murder, at a distance of 60 to 80 feet. Louis Pelzer, a shoe cutter at the factory, and others likewise identified him.

A captain of State police rendered his opinion that the bullet which had killed one of the victims had come from a Colt automatic revolver carried by Sacco, but gave this opinion in qualified and somewhat ambiguous words. Sacco in his own defense related his passing the entire day of the murder elsewhere than on the scene, and ten witnesses supported his alibi. Against both men the prosecution testimony alleged that they had lied about their movements when arrested, and this the defendants explained on the score of a wish to protect companions from what they supposed to be an anti-radical move of the authorities. There was much reference in the course of the trial to the radical views and activities of the defendants, but the State later alleged that the defense had itself first introduced this topic, asserting that the men were being attacked for their political beliefs. The jury after five hours of deliberation, July 14, 1921, found both defendants guilty of the murder of Parmenter and Berardelli.

The verdict was received with great bitterness by Socialists and other radicals in foreign countries. In October, 1921, an attempt was made to bomb the American Embassy at Paris, a hand grenade was thrown when the police in that city raided a protest meeting, and threats were made against the United States Legation at Havana. Motion was brought before Judge Thayer at Dedham for a new trial, and this motion he denied December 24. In the

following month, however, he granted an extension of time for the defense to file a bill of exceptions, and in September, 1922, the defense filed a motion for another trial, it being advanced that one of the identifiers of Sacco had repudiated testimony rendered at the original trial. Subsequent progress of the case was much delayed by the illness of Judge Thayer, who was obliged to go to a hospital for treatment in October, 1924, after denying motions brought by the defense. Among these motions was one based on a 93-page brief containing the findings of a microscopist, Albert H. Hamilton, to the effect that micro-photographs showed disparities rendering it impossible that the bullet that killed Berardelli could have come from the pistol carried by Sacco.

The case was further complicated when Celestino Madeiros, a youth under conviction of the murder of a bank cashier at Wrentham, Mass., met Sacco in Dedham jail, and on Nov. 18, 1925, volunteered a confession to the effect that he had been a participant in the South Braintree crime, and knew that neither Sacco nor Vanzetti had been involved in it. There resulted another motion for a new trial of Sacco and Vanzetti, based on the Madeiros confession and alleged corroborating testimony. Shortly thereafter, two former employees of the Federal Department of Justice made declarations to the effect that this department had been secretly active in seeking evidence against both Sacco and Vanzetti prior to their arrest. From these allegations resulted the contention that the Federal Government had had a part in bringing about the prosecution of the men.

Judge Thayer denied Oct. 24, 1926, the petition based on the Madeiros confession and on the allegations of Federal activity against the defendants. It was pointed out that Madeiros, under the prospect of early execution for another crime, had a motive for assuming the guilt in the South Braintree case, in the prospect that his execution might be delayed in order that he might testify. William G. Thompson of Boston, the attorney who had argued this motion for the defense, carried the case to the State Supreme Judicial Court on a motion of appeal. This court, however, refused an appeal, taking the ground, well established in the law of the State, that the trial judge had the final power to determine the matter of retrial on grounds of fact. On Apr. 9, 1927, Judge Thayer sentenced Sacco and Vanzetti to die in the electric chair in the week of July 10.

The defense now carried the case to Governor Fuller of Massachusetts, as the holder of the power of clemency. He undertook a personal investigation, and appointed on June 1 a committee consisting of President Lowell of Harvard University, President Stratton of the Massachusetts Institute of Technology, and Judge Robert Grant to study the case independently and advise him of its conclusions. Another member of the Harvard faculty, Prof. Felix Frankfurter, shortly before this time published a review of the case from the point of view of an expert in evidence, in which he took the ground that both the identifications of the defendants and the evidence as to their subsequent consciousness of guilt were faulty. Governor Fuller found against the plea for clemency on August 3. In a published decision of some 3000 words he expressed his conclusion

that the defendants had received a fair trial, that nothing had developed that would entitle them to a new trial, and that the defendants were actually guilty. He stated that he had questioned Madeiros on his confession and had found him unable to recall the scene and details of the South Braintree murder. His advisory committee, the Governor asserted, had conducted its inquiry independently of his, and had formed conclusions in accord with his own.

Successive stays of execution prolonged the lives of the defendants, while efforts were made by their counsel, without avail, to obtain from the Supreme Judicial Court a writ of habeas corpus and from Judge Thayer a new trial, and, that failing, a revocation of sentence, and, finally, from members of the United States Supreme Court a writ or a stay of execution. Sacco for thirty days conducted a hunger strike, but desisted under threat of forcible feeding. During the days succeeding Governor Fuller's disposal of the clemency plea, bombs were set off in two New York subway stations, a Philadelphia church, the residence of the Mayor of Baltimore and the home of one of the trial jurors. Demonstrations were held in many American and foreign cities, and protests against the execution poured in from organizations abroad. On August 23, Sacco and Vanzetti were put to death in the electric chair in Charlestown prison, and with them Madeiros. Vanzetti uttered from the chair a declaration of innocence.

SAFETY, INDUSTRIAL. See NATIONAL SAFETY COUNCIL.

SAFETY AT SEA. The U. S. Steamboat Inspection Service of the Department of Commerce in its report for the fiscal year ended June 30, 1927, stated that the total number of accidents resulting in loss of lives was 211, a decrease of 103 from the previous year. The total number of lives lost from all causes among passengers and crew was 262, a decrease of 100 from the previous year. Of the losses of lives, 146 were from suicide, accidental drowning and other causes, while the loss of 116 lives was fairly chargeable to accidents, collisions, foundering, etc. During the fiscal year 339,447,152 passengers were carried on steam vessels that were required by law to report the number of passengers carried. Of these 48 were lost, showing that 7,071,813 were carried for each passenger lost.

Detailed statistics included in the report of the Supervising Inspector General, Steamboat Inspection Service, showed that 7050 vessels of all types, having an aggregate tonnage of 12,165,143, were inspected during the fiscal year. Steam vessels accounted for 5563, motor vessels for 1005, while barges made up the remainder. Although the total number of vessels inspected showed a slight decrease compared with the previous fiscal year, the total tonnage increased by more than 250,000. Licenses were issued to 24,161 officers of all grades and 9716 able seamen received certificates. Certificates of efficiency were also issued to 7746 lifeboat men.

There is given below a summary of disasters with heavy loss of life at sea during 1927, as recorded in the daily press:

January 11. The American steamer *John Tracy* was sunk off Cape Cod, Mass., with a loss of 27 lives.

January 25. The Spanish steamer *Retuerto* foundered off the Portuguese coast, and 14 of crew drowned.

February 10. The American steamer *Elkton*, with a

crew of 37, in the Pacific Ocean, ceased to be heard from.

February 20. In a severe storm, eight U. S. coast guardsmen were drowned near Provincetown, Mass.; eight of the crew were lost off a schooner, off the coast of New Jersey, in a high sea.

February 25. The Greek steamer *Stenios* struck a rock off Land's End, England, 19 of the crew of 20 being drowned.

March 20. The Cardiff trawler *Mura* ran on the rocks near Bude and eight lives were lost.

May 26. The steamship *Negros* was sunk off the Philippine coast, near Romblon, with native students on board, with the loss of 108 lives.

July 2. Explosives on two junks lying alongside the Shanghai-Nanking Railway wharf at Siskwan blew up, killing more than 100 Chinese.

July 14. The British steamship *Shahzada* sank off the Indian coast; 27 of the crew were drowned.

August 1. An explosion, which did not sink the ship, however, occurred on board the Japanese mine layer, *Tokwa*, resulting in the loss of 38 lives.

August 24. During night manoeuvres in Bungo Channel Straits in the Sea of Japan, 20 miles northeast of Mifunoseki, two collisions occurred in which the Japanese destroyer *Warabi* was sunk in 15 minutes, and the destroyer *Ashi* was crushed by the 6000-ton cruisers *Jintou* and *Naka*, with a total loss of 129 lives, the destroyers were engaged in a night attack, and the fleet was steaming at full speed with all lights extinguished.

October 25. The Italian liner *Principessa Mafalda*, bound from Genoa to Rio de Janeiro and Buenos Aires, sank about 80 miles southeast of Porto Seguro, Bahia, Brazil. About 325 of the 1258 passengers were drowned. The disaster was due to the breaking of a propeller shaft which, flooding the engine room, let water into the boilers, causing an explosion that tore the vessel open.

October 29. In a collision between the fishing schooner *Avalon*, from Gloucester, Mass., and the Cosulich Line steamship *Presidente Wilson*, off Cape Cod, Mass., 11 of the crew of the former vessel were drowned.

November 3. The steamship *Tahiti*, 7898 tons, of the Union Steamship Company of New Zealand, and a ferry steamer running between the circular quay and Watson's Bay in Sydney Harbor, New South Wales, were in collision, and the ferry steamer sank at once. Over 50 lives were lost despite heroic attempts at rescue.

November 12. The steamship *Tukaram* foundered in a storm off Bombay, India, and 128 persons were drowned. On the same date the steamship *Jayanti*, with 100 aboard, was reported missing.

December 17. The U. S. Navy submarine S-4 sank off Provincetown, Mass., after being rammed by the U. S. Coast Guard destroyer *Paulding*. The submarine carried a crew of 42 men, all of whom were lost despite attempts to raise the boat.

ST. CHRISTOPHER or ST. KITTS. See LEeward ISLANDS.

ST. HELENA. An island of volcanic origin in the South Atlantic, about 1200 miles from the west coast of Africa, and belonging to Great Britain. Area, 47 square miles; population, according to the census of 1921, 3747; estimated civil population, Dec. 31, 1925, 3747. Capital and seaport, Jamestown. The chief occupation is the fibre industry, and fibre and tow are the principal exports. In 1925 the exports were valued at £47,476 and the imports at £57,805; revenue £21,731, expenditure, £19,567; there is no public debt. A detachment of the Royal Marine Artillery is stationed on the island, which is also a coaling station for the British Navy. Governor in 1927, C. H. Harper.

ST. JOHN'S COLLEGE. A college of liberal arts and sciences at Annapolis, Md.; founded as King William's School in 1696. The enrollment for the autumn term of 1927 was 245, and there were 25 members on the faculty. The college grants the A.B. degree only. Freshmen were given orientation courses in literature and the social sciences. The endowment funds amounted to \$151,300, and the yearly income to \$140,944.35. The library contained 16,430 volumes. President, Enoch B. Garey, LL.D.

ST. LAWRENCE UNIVERSITY. A co-educational institution of higher education at Canton, N. Y.; founded in 1856. The registration for the autumn term of 1927 was 3431, distributed as follows: College of letters and science, 788; theological school, 27; law school, 2533; school of agriculture, 98. The faculty numbered 124, divided among the several schools as follows: Letters and science, 42, of whom five were additions during the year; theological, 4; law, 32; agriculture, 11; special lecturers, 15. The college endowment fund was \$2,304,381, and the income for the year \$155,927. The library contained 52,000 volumes. New buildings erected during the year were: Dean Eaton Hall, a dormitory for women, an administration building and a president's house. President, Richard Eddy Sykes, D.D.

ST. LUCIA, 150°51'N. A British insular colony in the Windward group of the West Indies. Area, 233 square miles; population in 1925, 55,099. Castries, the chief port and capital, is a naval base and coaling station. The movement of population in 1925 was: Births, 2113; deaths, 1156; marriages, 255. On Dec. 31, 1925, there were 42 Roman Catholic and 7 Protestant schools, with 8198 pupils enrolled. The chief products are cacao, sugar, lime juice, lime oil, bay oil, honey, hides, logwood, rum, fuel, molasses and syrup. Imports in 1925 were valued at £277,013; exports, at £243,207. Of the imports the largest share came from the United States and of the exports the largest share went to Great Britain. The total shipping in the same year was 1,106,097 tons, of which 890,015 tons were British. Revenue in 1925, £75,555; expenditure, £85,082; public debt, £139,230. The island is under an administrator aided by a nominated executive and a partly nominated and partly elected Legislative Council. Administrator in 1927, Lieut. Col. W. B. Davidson-Houston. In the early summer a disastrous fire swept the city of Castries. The property damage amounted to £215,000, only £70,000 of which was covered by insurance.

ST. PIERRE AND MIQUELON, mē-ke-lōn'. Two small groups of islands belonging to France, close to the southern coast of Newfoundland, and named from their two largest islands. Area of the St. Pierre group, 10 square miles; population in 1921, 3419; area of the Miquelon group, 83 square miles; population in 1921, 499. The islands are rocky and unsuited to agriculture, their main importance being as a centre for the cod-fishing industry. The chief town is St. Pierre, which has regular steamship communication with North Sydney and Halifax. In 1924 the imports totaled 149,075,555 francs; the exports, 142,804,699 francs. The imports consisted chiefly of textiles, salt, wines, foodstuffs, and meat; the exports, cod, dried and fresh, and fish products. The local budget for 1925 was: Revenue, 10,549,610 francs; expenditure, 10,058,735 francs. The islands are under a governor aided by consultative and municipal councils.

ST. THOMAS. See SÃO THOME AND PRINCEPE.

ST. VINCENT. A British insular colony in the Windward group of the West Indies. Area, 150.3 square miles; population in 1925, 48,182. Kingstown, with a population of 3836 in 1921, is the capital. The movement of population in 1925 was: Births, 1946; deaths, 876; marriages, 136. In the same year there were 27 primary

schools with an average attendance of 2648. The chief products are arrowroot, sugar, cotton, rum, cacao and spice; cotton (Sea Island) being especially important and regarded as the best grown in the British Empire. In 1925 the imports were valued at £211,907; exports, £232,432; revenue, £62,460; expenditure, £53,190; public debt, £10,290; total shipping, 418,774 tons. One-half of the Grenadine islands are under the administration of the island of St. Vincent and the other half under Grenada (q.v.). At the head of the administration is an administrator and colonial secretary, who is aided by a legislative council consisting of official, elected, and nominated members. Administrator in 1927, R. Walter.

SAKHALIN, sã'kã-lyên'. An island off the eastern coast of Siberia, separated from Japan by the narrow Strait of Soya. The portion south of the 50th parallel of N. latitude belongs to Japan; north of that line lies the province of Sakhalin, belonging to Russia. Japanese Sakhalin, or Karafuto (q.v.), has an area of about 13,934 square miles and a population, according to the census of 1925, of 203,504. The area of the Russian province is 14,688 square miles, with a population estimated at 34,000 in 1916. The northern half is covered with forests to the extent of 80 per cent of the entire area. A small portion of the northern area is not fitted for the growth of trees because of the climate. Most of the trees are pines suitable for building lumber, which is transported by rafting.

SALMON, LUCY MAYNARD. American educator, died at Poughkeepsie, N. Y., February 14. She was born at Fulton, N. Y., in 1853 and graduated at the University of Michigan in 1876. From 1876 to 1881 she was principal of the high school at McGregor, Iowa, and from 1883 to 1886, instructor in history at the Indiana State Normal School. During 1886-87 she was fellow in history at Bryn Mawr College, and in 1887 became assistant professor of history at Vassar College, where from 1889 until her death she held the position of professor. In 1889 and 1900 she studied at Paris and Florence, and in 1912 received the degree of L.H.D. from Colgate University. In 1904 she was president of the Association of History Teachers of the Middle States and Maryland. Among her historical works are: *History of the Appointing Power of the President* (1885); *Domestic Service* (historical and statistical study), 1897; *Progress in the Household*, 1906; *The Newspaper and the Historian*, *The Newspaper and Authority* (companion volumes), 1923.

SALMON, THOMAS WILLIAM. American psychiatrist, was drowned off Westbrook, N. Y., August 13. He was born Jan. 6, 1876, at Lansingburg, N. Y., and graduated at Albany Medical College in 1899. From 1899 to 1903 he engaged in private practice and hospital work at Willard, N. Y., before joining the U. S. Marine Hospital Service (later the U. S. Public Health Service). He served until 1915 in that service. From 1915 to 1921 he was the medical director of the National Committee for Mental Hygiene, as well as a member of the staff of the Rockefeller Foundation. Soon after the United States entered the World War Dr. Salmon was commissioned major in the Medical Corps, U. S. Army, and at once took an active part. He and his associates on the National Committee for Mental Hygiene recommended

the exclusion of all mentally and nervously unfit recruits from the army, and through their work and recommendations eliminated between 70,000 and 80,000 such recruits. Later, in France, Dr. Salmon became consultant in neuro-psychiatry with the American Expeditionary Forces, and made possible the control of "shell shock" among the soldiers. Congress awarded the Distinguished Service Medal to him. In 1921 he became professor of psychiatry at Columbia University, and in addition acted as consulting psychiatrist at the Presbyterian Hospital from 1922. He was president of both the American Neurological Association and the American Psychiatric Association.

SALONIKI INTERNATIONAL FAIR. See EXPOSITIONS.

SALVADOR, sãl'vã-dõr'. A Central American republic, situated to the east of Guatemala on the Pacific coast. Capital, San Salvador.

AREA, POPULATION, ETC. The area is estimated at 13,176 square miles; the population on Jan. 1, 1925, was estimated at 1,034,000. The mestizos or mixed races numbered 1,307,200 and the Indians 326,800. San Salvador had a population of 84,315 at the census of 1923. Other large towns with their populations at the same time were: Santa Ana, 72,285; San Miguel, 35,546; Santa Tecla, 27,279; San Vicente, 31,927; and Sonsonate, 16,283. In 1925 there were 57,352 births and 32,870 deaths.

EDUCATION. Education is free and compulsory. The report of the national department of school supervision and administration for 1926 stated that 849 schools were in session during that year, with a total of 1555 teachers, an enrollment of 51,933 students, and an average attendance of 35,083. There were 75 private schools, with an enrollment of 6679 pupils, and 61 municipal schools and seven kindergartens. On July 1, 1927, the National University of Salvador began to function on a new basis of autonomy.

PRODUCTION. The great economic weakness of Salvador is that it is virtually a one-crop country and depends almost entirely for its prosperity on coffee. This defect has been realized by the government and the farmers, and considerable attention has been given to the diversification of crops, careful selection of seeds, scientific methods of farming, and improvement in the breed of domestic animals. The mineral wealth of the country includes gold, silver, copper, iron and mercury.

COMMERCE. In 1926 the coffee crop, the largest in the history of the country, reached a production of approximately 115,000,000 pounds, a condition which was, in a large way, responsible for the \$7,752,000 increase in exports in 1926 over 1925. The total foreign trade in 1926 amounted to \$41,000,000 and was the greatest in Salvador's history. The foreign trade has grown remarkably, especially in recent years; each year since 1923 it has been more than twice that of 1913, when it was valued at about \$16,000,000.

FINANCE. The improvement in financial conditions continued during 1926, when for the third consecutive year a balanced budget was produced, and a surplus of \$195,934 went into the treasury. The revenues amounted to 22,314,798 colones and the expenditures to 21,922,930 colones. The budget law for 1927-28 gave the total revenues as 21,851,188 colones

and the total expenditures as 21,827,625 colones, leaving a surplus of 25,563 colones.

COMMUNICATIONS. In 1925, 659 steamers of 1,228,507 tons entered at the ports of the republic. Three companies were operating railways in Salvador during 1926, the International Railways of Central America (American), the Salvador Railway Company, Ltd. (British), and the San Salvador and Santa Tecla Railway (Salvadorean). The last mentioned is a small suburban line of steam trains with 8 miles of track. All these lines prospered, and the number of passengers and the amount of trade showed a good gain. The International Railways of Central America is the most important railway in the country, and at the end of 1926 it had a line traversing the country from the port of La Union near Honduras almost to the Guatemalan border. This company carried on active construction of extensions during the year, and the completed mileage was increased from 157 miles at the end of 1925 to approximately 250 miles at the end of 1926. On Jan. 17, 1927, Dr. Molina, president of the republic, officially opened the new Soyapango-Textistepeque-Santa Ana section of the International Railways of Central America, which connects the eastern and western sections of the country. The Salvador Railway Co., Ltd. had 90 miles of line connecting the port of Acajutla with the capital, and Sitio del Niño with Santa Ana, at the close of 1926.

GOVERNMENT. Under the constitution, executive power is vested in a president elected for four years, who acts through a ministry of four members; and legislative power in a congress of 42 members elected for one year by universal suffrage. President, Dr. Pio Romero Bosque, inaugurated Mar. 1, 1927, for a term of four years.

HISTORY. As a result of the elections held Jan. 9, Dr. Pio Romero Bosque was elected to the presidency to succeed Dr. Alfonso Q. Molina. Dr. Bosque was born in 1863 and studied law at the National University of Salvador, receiving the degree of doctor of laws in 1889. Entering soon thereafter on his twofold career as jurist and statesman, Dr. Bosque early began to hold important public offices, especially in the judiciary, where, after occupying for years the position of associate justice, he became the chief justice of the supreme court. He has also served as a member of the National Assembly, Minister of Promotion, Industries and Public Education, from 1903 to 1907, Minister of War and Marine from 1919, until his election as President, and Vice President of the Republic for the 1923-27 term.

SALVATION ARMY. An international organization with headquarters in London, whose sole purpose is the "salvation of mankind from all forms of spiritual, moral, and temporal distress." The movement was first organized as a mission in the East End of London in 1865 by William Booth, a minister of the English "New Connection Methodists." It spread rapidly throughout England and in 1880, as the Salvation Army, was extended to the United States. Incorporation took place in New York in 1899.

The organization of its government is military in character, and in 1927 it was under the command of General Bramwell Booth, eldest son of the founder, with the international headquarters in London. The higher command is divided into

territories, each territory generally being a separate country or colony, with its own organization under the direction of a commissioner, each local corps or post being under the command of a captain and a lieutenant. The United States is divided into four territories, with headquarters in New York, Chicago, San Francisco and Atlanta, the last named having been organized during 1926. Each territory maintains a training college for men and women at its headquarters and issues two weekly periodicals, the *War Cry* and the *Young Soldier*.

In 1927 there were 4614 officers and cadets giving full time; 22,441 local officers and bandmen filling honorary positions; and 1655 corps and outposts in operation; 15 hospitals and dispensaries were conducted by the Army, which rendered service to 56,786 patients. Other institutions included 106 industrial homes with accommodation for 3401 men; 97 free employment bureaus; 9 children's homes; 33 women's homes and maternity hospitals, accommodating 2121 women; 79 hotels and 12 women's boarding homes. Converts during 1926 totaled 112,041. The Army conducted extensive welfare work for children at many institutions throughout the United States, particularly at the Lytton Springs Orphanage and Industrial Farm in California, and made great progress in the establishment of boys' clubs, troops of life-saving Scouts of the World and Girl Guards. Valuable work was conducted by Army workers in the prisons, 20,742 prisoners being assisted upon discharge, and 691 paroled to the Army. The following statistics indicate the general nature and scope of the relief work carried on: Christmas dinners, 389,162; persons afforded temporary relief outside industrial homes and hotels, 2,118,042; mothers given summer outings, 9649; children given summer outings, 46,982; pounds of ice distributed, 187,101; pounds of coal distributed, 4,002,633; employment found for 119,118 men and 35,764 women; indoor meetings held during the year, 519,617; open-air gatherings, 205,321. Similar activities were carried on by the Salvation Army in 82 countries and colonies.

The national headquarters of the Army is at 122 West 14th Street, New York, and Commander Evangeline Booth, daughter of the founder, General William Booth, is the national leader. The American territorial commissioners for 1927 were: Richard E. Holz (Eastern), John McMillan (Central), Adam Gifford (Western), and William McIntyre (Southern).

SALZBURG. A province of the Austrian republic; before the war a crownland of the Austro-Hungarian Empire. Area, 2762 square miles; population, according to the census of 1923, 223,023. Capital, Salzburg, with a population in 1923 of 37,856.

SAMARIA. See **ARCHAEOLOGY**.

SAMOA. A group of 14 islands in the Pacific Ocean, between 13° and 15° S. latitude and 168° and 173° W. longitude, about 2000 miles south of Hawaii and 4000 miles southwest of San Francisco. Since Feb. 13, 1900, the islands east of 171° W. longitude have belonged to the United States; and the islands west of that line belonged to Germany until the outbreak of the war in 1914, when they were occupied by the British and later turned over to New Zealand for administration, under a mandate of the League of Nations.

The official name applied to the former German Samoan Islands is Western Samoa. This territory includes Savaii and Upolu, two of the largest islands, and Apolima and Manono. Area of Savaii, about 660 square miles; Upolu, 550 to 600 square miles. The principal port is Apia, on the island of Upolu. Population, Dec. 31, 1925, 40,229, of whom 2498 were Europeans and half-castes, and 888 coolie laborers. About 13,000 pupils are instructed in schools conducted by the government and various missionary groups. The products include copra (the chief product), cacao, rubber, sugar, and cardamoms. The imports for 1925 were valued at £345,989; exports £379,388. The principal source of imports was Australia and the chief destination of exports was Great Britain. In the same year 88 vessels of 83,137 tons entered and cleared at the port of Apia. The revenue collected for the year ended Mar. 31, 1926, was £150,038; expenditure, £145,687. The general control of the islands is under the New Zealand ministry, and the local government is under an administrator. Administrator, Maj. Gen. Sir George Richardson.

Tutuila, Tau, and the Manua group comprise the American Samoan group of islands. The total area of the islands is about 60 square miles; and the population, according to the census of 1920, is 6616. The principal port is Pago-Pago, at the extreme end of the bay of the same name on the island of Tutuila, the best and safest harbor in the South Seas. The soil is very fertile. There is an abundance of copra, which is the only article exported, and a variety of fruits, including oranges, limes, bananas, mangoes, and alligator pears. The United States Navy has established a high-powered radio station on the island of Tutuila, which is in daily communication with the islands of the Pacific and the United States. The government is in the hands of the Governor of the United States Naval Station at Pago-Pago. The islands are divided into three general administrative districts, corresponding to the former political divisions of Samoa, each administered by a native governor who is appointed by the governor of all the islands. At the head of each village is a chief, elected annually, subject to the Governor's approval. Governor at the beginning of the year, Capt. E. S. Kellogg, U. S. N.

SAMOS. An island in the Aegean Sea, belonging to Greece. Area, about 181 square miles; population, according to the census of 1920 and that of the refugees made in 1923, 84,294. Capital, Vathy, with a population of 12,472. The island was acquired from Turkey as a result of the Balkan War of 1912-13.

SAMUEL, MARCUS. See BEARSTED, VISCOUNT.

SÄNGERFESTS. See MUSIC.

SANITATION. See GARBAGE AND REFUSE DISPOSAL; SEWERAGE AND SEWAGE TREATMENT; WATER-WORKS AND PURIFICATION.

SAN MARINO, mä-ré'nó. A republic of Europe, located in the peninsula of Italy. Area, 38 square miles; population, in December, 1925, 12,952. The chief exports are wine, cattle, and the building stone quarried on Mount Titano. The revenue and expenditure for 1925-26 balanced at 4,529,296 lire. There is no public debt. Politically and economically San Marino is closely allied with Italy.

SANSKRIT. See PHILOLOGY, MODERN.

SANTO DOMINGO. See DOMINICAN REPUBLIC.

SÃO THOMÉ, soun tö-má', AND PRINCIPE, prén'thé-pá. Two islands in the Gulf of Guinea, about 125 miles from the coast of Africa, and belonging to Portugal. Area, 360 square miles; population, according to latest available statistics, 58,907 for São Thomé and 4938 for Principe. The islands are hilly, with volcanic soil, but the land is fertile and the products are varied. Cacao, cinchona, coffee, and rubber are the chief exports. The revenue and expenditure for 1926-27 balanced at 10,213,658 escudos. Imports for 1925 were 31,195,326 escudos, and exports 68,513,874 escudos.

SARATOGA, BATTLE OF. See CELEBRATIONS.

SARAWAK, sä-rä'wäk. An independent state, comprising the northwestern part of the island of Borneo, under the protection of Great Britain. Area, about 42,000 square miles (coast line 400 miles). Population estimated at about 600,000, made up of Malays, Dyaks, Kayans, other Polynesian tribes, Chinese, etc. Kuching is the capital, with a population of about 25,000. There are large resources of coal, and recently an oil field has been opened up in the Baram region. The chief exports are petroleum products, plantation rubber, and sago flour. The imports in 1925 were valued at \$21,072,884; exports \$56,011,036. The trade is chiefly with Singapore. The revenue in 1925 was £594,308; expenditure, £455,012. There is no public debt. The administration of the region was acquired by Sir James Brooke in 1842 from the Sultan of Brunei; it was governed by him under British protection. On his death in 1917 he was succeeded by his son, Sir Charles Vyner Brooke, who is the present rajah. British supervision is exercised by the British agent for Sarawak and British North Borneo.

SARGENT, WALTER. American artist and educator, died September 19 at North Scituate, Mass. He was born May 7, 1868, at Worcester, Mass., and studied art at the Massachusetts Normal Art School in Boston, and at the academies of Colarossi and Delecluse in Paris, and was a special student at Harvard. From 1903 to 1909 he was state supervisor of drawing in Massachusetts and director of drawing and manual training in Boston, and from 1909 until 1924 professor of art education at the University of Chicago, serving as chairman of the department of art after 1924. In June, 1927, he was given the degree of Doctor of Arts by Boston University. He was the author of *Pine and Industrial Arts in Elementary Schools* (1912); *How Children Learn to Draw* (1916); *Art Education in the United States* (1918); and *The Enjoyment and Use of Color* (1923).

SARS, särs, GEORG OSSIAN. Norwegian zoologist, died April 10 at Oslo, Norway. He was born in Kinn, Norway, in 1837, and was educated at Bergen and at Christiania University, devoting himself to the study of medicine and zoology. From 1864 to 1893, he was employed by his government in an investigation of the cod fisheries and Lofoten fisheries. He was made professor of zoology at Christiania University in 1874. His contributions to the science of zoology included modern methods for the study of the biology of the ocean, and more than 100 publications on crustacea, mollusca, cod, and whales, for which he also drew the illustrations. His outstanding contribution to the literature of zoology, was *An Account of the Crustacea of Norway*, in six volumes.

SARTAIN, EMILY. American etcher and portrait painter, died June 18 at Philadelphia, Pa. She was born at Philadelphia in 1841, the daughter of John Sartain, noted engraver, from whom she received her early training. She continued her studies at the Pennsylvania Academy of Fine Arts, 1864-70, under Schussele, and then went to Italy, and to Paris where she studied with Luminai, 1871-75. Frequent exhibitions of her oil paintings were held, notably those at Paris in 1875 and 1883, and in 1881 and 1883 she was awarded the Mary Smith prize of the Pennsylvania Academy for the best painting by a woman. In 1886 she became principal of the Philadelphia School of Design for Women, and in 1919 became principal emeritus.

SASKATCHEWAN. A prairie province of Canada, situated between Alberta on the west and Manitoba on the east, extending northward from Montana and North Dakota to the Northwest Territories. Area, 251,700 square miles; population, according to the census of 1926, 821,042, a gain of 63,532 over 1921. Capital, Regina, with a population in 1926 of 37,320. Other cities are: Saskatoon, 31,234, a gain of 25 per cent over 1921; Moosejaw, 19,039; Prince Albert, 7873. Of the total population in 1921, 538,552 were living in rural communities. In 1925 there were 189,050 pupils and 6054 teachers in the 4679 public elementary schools, and 17,545 pupils in the secondary schools. The total area under cultivation in 1926 was 20,419,175 acres, and the value of agricultural products was \$320,922,000. The acreage and estimated yield of the principal crops in 1926 was as follows: Wheat, 13,277,858 acres, 208,462,000 bushels; oats, 4,694,134 acres, 136,599,000 bushels; barley, 1,030,398 acres, 25,451,000 bushels; rye, 291,736 acres, 4,919,000 bushels; flax, 597,982 acres, 4,784,000 bushels; mixed grains, 30,400 acres, 860,000 bushels; other grains, 2500 acres, 41,000 bushels; potatoes, 44,600 acres, 3,015,000 cwt.; roots, 4900 acres, 463,000 cwt.; hay and clover, 407,000 acres, 606,000 tons; fodder corn, 53,600 acres, 226,000 tons. Total exports in 1925-26 amounted to \$10,169,324; total imports to \$14,898,870. In 1925 there were 7031 miles of steam railway in operation. The government is under a lieutenant-governor appointed by the governor-general of the Dominion of Canada, and a legislative assembly of 63 members elected for five years by universal suffrage. Women not only have the right to vote but are eligible for seats in the legislature. Lieutenant-governor, H. W. Newlands; premier, treasurer, and minister of railways, J. G. Gardiner; public works, A. P. McNab; education, S. J. Latta; agriculture, C. M. Hamilton; attorney-general, J. A. Cross; highways, labor and industries, T. C. Davis; secretary and public health, J. M. Uhrich.

SATELLITES. See ASTRONOMY.

SAULSBURY, WILLARD. American politician and former United States Senator from Delaware, died February 20, at Wilmington, Del. Born at Georgetown, Del., Apr. 17, 1861, he was educated in private schools and at the University of Virginia, after which he studied law with his father in Dover and in 1882 entered the law office of Victor du Pont, with whom he was associated until 1888. He was unsuccessful as a candidate for the United States Senatorial nomination on the Democratic ticket in 1897. He was chairman of the Democratic State Committee from 1897 until 1906. He was

elected United States Senator in 1912 for the term of 1913-19, during the last two years of which he was president pro tempore of the Senate. A candidate for the Senate again in 1918, he was defeated by Louis Heisler Ball. Republican, and resumed his law practice at Washington and Wilmington.

SAULT STE. MARIE, CANALS AT. In 1927, 18,759 vessels passed through the United States and the Canadian canals at Sault Ste. Marie, Michigan and Ontario, having a total registered tonnage of 64,325,362 tons, as compared with 20,898 vessels of 71,290,862 tonnage in 1926. Through the United States canal there were 15,520 vessel passages with a registered tonnage of 59,843,101, and through the Canadian canal 3239 passages with a tonnage of 4,482,261. The number of passengers carried through the canals showed an increase of 5 per cent in 1927 over the 1926 figures, the totals for the two years being 55,115 and 52,704 respectively. The total freight passing through the canals aggregated 83,354,064 short tons, of which 64,392,752 tons were east-bound and 18,961,312 west-bound. Iron ore to the amount of 49,963,131 tons, carried through the United States canal, or 13 per cent less than the tonnage in 1926, was the leading item of freight east-bound. Other principal items east-bound were 320,303,925 bushels of wheat carried through the United States canal and 10,594,233 bushels through the Canadian canal, making a total of 330,898,158 bushels, or an increase of 22 per cent over 1926; 110,538,091 bushels of other grain through the United States canal and 8,931,458 through the Canadian canal, a total of 119,519,549 bushels, or an increase of 19 per cent over the previous year; and 5,260,420 barrels of flour through the American canal and 4,123,020 barrels through the Canadian, or a total of 9,383,440 barrels. The two leading items in west-bound cargoes were 15,953,959 short tons of soft coal, an increase of 23 per cent over 1926, and 1,153,541 tons of hard coal, a decrease of 22 per cent from 1926. These items were followed by 708,068 short tons of merchandise, of which 356,618 were carried via the United States canal and 351,450 via the Canadian canal; stone, 574,829 short tons, through the United States canal, an increase of 13 per cent, and 251,205 tons of oil, through the United States canal.

The United States canal was opened April 13 and closed December 16, while the Canadian canal was opened April 12 and closed December 18, making the season 248 days and 251 days, respectively.

SAVAGE, HENRY WILSON. American operatic and theatrical producer, died at Boston, November 29. He was born at New Durham, N. H., Mar. 21, 1859. After graduation at Harvard in 1880 he became a real estate operator, and he had attained notable success in this field when chance made him an impresario. In 1894 he had built the Castle Square Theatre in Boston, and after one lessee after another had gone into bankruptcy, Mr. Savage organized the Castle Square Opera Company for the production of grand opera in English at popular prices. The very first season, 1897, was successful; the company was increased, the repertory was enlarged and other cities were visited. In the fall of 1900 the company gave a short season in English at the Metropolitan Opera House, New

York, before the opening of the regular Metropolitan season. In 1904 he organized a special company and produced *Parafal* in English, with immense success, in the principal cities of the East and Middle West. In 1906-07 the same company toured the United States with Puccini's *Madame Butterfly*, and in 1911-12 with Puccini's *The Girl of the Golden West*. Besides these companies, Mr. Savage maintained a separate organization for the production of light opera. Among the many delightful musical comedies introduced by this company were *The Merry Widow* and *The Prince of Pilsen*, which achieved phenomenal success.

SAVINGS BANKS. See **BANKS AND BANKING.**

SAXONY. The name Saxony is applied to three divisions of the former German Empire; the Republic of Saxony (formerly the Kingdom of Saxony); the former Grand Duchy of Saxony (now a part of Thuringia); and the Province of Saxony in Prussia.

REPUBLIC OF SAXONY. The third largest state of the German republic: proclaimed a republic on Nov. 9, 1918. Area, 5787 square miles; population, according to the census of 1925, 4,992,320. The capital, Dresden, had a population in 1925 of 619,157. The largest city is Leipzig, with a population of 679,159. The other cities with over 100,000 in 1925 were Chemnitz, 333,851, and Plauen, 111,436. In 1925 the movement of population was: Births, 91,979; deaths, 52,664; marriages, 40,489. The latest available school statistics showed 3547 common and continuation schools with a total attendance of 833,269 pupils. In proportion to its size, Saxony is the leading state in German industry, and rivals the chief industrial provinces of Prussia. In 1925 the area under cultivation was 2,321,531 acres. The area under the principal crops with their yields in metric tons was: Wheat, 173,267 acres, 200,870 tons; rye, 435,431 acres, 390,630 tons; barley, 73,138 acres, 71,182 tons; oats, 381,422 acres, 334,353 tons; potatoes, 253,486 acres, 1,839,878 tons; meadow, 451,025 acres, 696,951 tons of hay. The livestock census taken at the end of the same year showed 171,878 horses, 697,617 cattle, 618,107 pigs, 233,757 goats, and 85,943 sheep. The chief industry is textile manufacturing, but mining and metal-working are also of importance. In 1925, 3,869,244 tons of coal and 9,918,876 tons of lignite were produced, the combined value being 101,156,000 gold marks. The ordinary budget for 1926-27 balanced at £17,275,471 and the extraordinary budget at £3,680,744. The constitution of the republic is dated Oct. 26, 1920. The diet was elected on Oct. 31, 1926, and is composed of the following parties: German Social Democratic party, 31; Saxon Social Democrats, 4; Democrats, 5; German National party, 14; People's party, 12; Communists, 14; Middle Class party, 10; others, 6. Prime Minister (appointed in February, 1924, reelected Jan. 11, 1927), Herr Heldt, of the Socialist party.

GRAND DUCHY OF SAXONY or SAXE-WEIMAR. A former constituent state of the German Empire; proclaimed a republic in November, 1918, but united at the end of that year with Thuringia (q.v.). Area, 1397 square miles; population in 1919, 433,959.

SAXONY IN PRUSSIA. A province of Prussia.

Area, 9758 square miles; population in 1925, 3,272,145.

SAZANOFF, SERGIUS DMITRIEVITCH. Russian statesman and diplomat, died at Nice, France, December 23. He was born in the province of Ryazan, Russia, July 20, 1866, and, after receiving his education at the Alexandrovsky Lycée, entered the diplomatic service. Much of the early part of his career was spent in Rome, but he served in London from 1890 to 1894 as second secretary of the Russian Embassy, and again in 1904 and 1905 as its counsellor. Here, as assistant to Count Benckendorff and as chargé d'affaires in the absence of the latter, he rendered valuable service in handling the Dogger Bank incident of 1904. His next post was as Russian minister at the Vatican, after which he returned to St. Petersburg, in 1909, to serve first as under-secretary at the foreign office and then as foreign minister, from 1910. He persuaded Czar Nicholas II to mobilize the army in 1914, and was a loyal supporter of the entente cause throughout the War. He was forced by ill health to resign from his position as foreign minister in 1916. He was appointed ambassador to England in January, 1917, but was recalled on the eve of his departure for London, just prior to the overthrow of the Czar. In the same year he became foreign minister of the counter-revolutionary Omsk government, following the October revolution. After the Bolshevik coup d'état (Nov. 6-7, 1917) he escaped from Russia and was at the Peace Conference in Paris, where, as at Geneva, he opposed recognition of the Bolsheviks. As Kolchak's chief representative abroad, with the rank of minister of foreign affairs, he was unsuccessful in winning recognition for Russia in England, and after failing in other negotiations he retired to private life in 1920. In retaliation for his royalist sympathies and opposition to the Bolsheviks he was accused, while in exile in France, of having blamed France, as Russia's ally, for having started the War, and he was also accused of having been instrumental himself in starting the War, charges which he denied, in his memoirs.

SCANDINAVIAN LITERATURE. In this review, covering the year 1927, there are included also the late books of 1926. It is divided, as usual, into Danish, Norwegian and Swedish literature.

DANISH. Drama. Much to the surprise of the critics, who had pronounced it poorly adapted for acting, Johannes Heskjær's tragedy *Kristine* proved a complete success on the stage. It is in many ways similar to the plays of Shakespeare and of Maeterlinck. In *Konglofret* (*The Royal Sacrifice*), which centres around the sad life of the Danish king Hrolf Helgesøn, Valdeman Rørdam shows great lyrical power.

Poetry. Johannes V. Jensen wrote *Verdens Lys* (*The Light of the World*), a collection of poems which make a universal appeal and have several of the qualities of the old Danish classics. In *Bølger i Bløst* (*Waves in the Storm*), Kai Hoffmann once more expresses his love of nature in general and especially of Spring. Per Lange proves himself a master of diction as well as a man of deep feeling, in *Kaos og Stjerner* (*Chaos and the Star*).

Fiction. The Icelandic Gunnarsson

continued the story of Uggi Greipsson, who is really Gunnarsson himself, in *Den uerfarne Rejsende* (The Inexperienced Traveler). In *Solongen* (King of the Sea), a story written in true epic style, Harry Solberg again clearly interprets the life and the psychology of primitive people. *Lukkens Omnibus* (Fortune's Omnibus) proves Otto Rung a thorough master of external description, although he does not allow the reader to look closely into the inner life of his characters. The tragic outcome in Henrik Pontoppidan's *Mans Himmerig* (Man's Heaven), which is ironically named, is brought about by the fact that the hero, in whose heart the love for wife and the love for an ideal contend for victory, ends by being faithless to both. *Kærlighedens Jaarsider* (Love's Seasons), by Agnes Henniger, is the story of a woman who is led astray by her constant desire for new experiences. The book is really a series of well executed pictures. Knud Andersen's *Breendings* (Breakers) is a good portrayal of the seaman's restlessness and his love for the sea. Johannes V. Jensen this year left his monumental historical novels to give us a rather disconnected but sober every-day tragedy from the peasant class in his story, *Jorgene*. Johannes Buchholtz's *Gudrun og Simon* (Gudrun and Simon) does not have the brilliancy of his earlier works, but shows more maturity and a firmer technic.

Science, Literature, etc. By the death of Georg Brandes (q.v.), Denmark lost its greatest critic. Among critical works of the year may be mentioned Paul V. Rubow's *H. C. Andersens Eventyr* (The Tales of H. C. Andersen), which is a valuable contribution to Andersen literature; and Valdemar Vedel's *Corneilles og hans Samtid* (Corneille and his Times), which gives a clear estimate of Corneille's position and importance in the development of the French drama. In *Dansk Sprog* (Danish Language), Lis Jacobsen gives some of the results of her researches, which cover a large field of Danish philology. In the field of religion, Helge Rode's *Det store Ja* (The Great Affirmative) is an attack on skepticism. Harald Höfding's *Religiøse Tanke-typer* (Types of Religious Thought) deals with the religious conceptions of different ages as exemplified in representative writers.

NORWEGIAN. Poetry. In his *Hamar i Hellom* (Cliff Among the Rocks), Olav Ankrust displays a desire to revive the love for Norwegian heritage in cultural and spiritual matters. Gunnar Reiss-Andersen's *Kungesønnens bryllup* (The Prince's Wedding), while melodic and artistically excellent, is in many respects below the regular standard of the author.

Fiction. Johan Bojer's *Det nye tempel* is a sequel to *Den store hunger*. Although in the earlier volume the author considered the individual as the important factor in religion, he now looks to the church as the important factor. In *Straumen og evja* (Currents and Counter-currents), Olav Dunn turns from the old days of Juvikingerne to ultra-modern times. Axel Krogh's *Jomfruens hjerte* (The Maiden's Heart) is a sequel to *Foged Carolus*. In his portrayal of the girl who is unable to become attached to any man, Krogh shows remarkable power to catch and reproduce various fleeting moods. In *Min barndoms have* (My Childhood's Sea), Vilhelm Krag gives an idyllic description of his childhood in Kristiansand. Mikkel Fønhus's *Reinbukken på Jotunfjell* (The Reindeer on the

Jotun Mountain), written in a language strongly colored by dialect and yet clear, is characterized by primitive but colorful descriptions of nature and animal life.

Of special interest to English readers is the translation of Rølvaag's *I de dage* and its sequel *Riket grunnlagges* (mentioned in this article in the YEAR BOOKS for 1925 and 1926) under the title *Giants in the Earth*. The reception accorded this translation makes it an important contribution to American literature. Knut Hamsun's *Landstrykere* (Tramps), touching, as it does, the problem whether it is better to remain in the home country where there is little or no land, or to emigrate, expresses Hamsun's usual restlessness. This work has been translated into English and several other languages. Among collections of short stories are the posthumous volume, *Foraret i Micropolis* (Spring in Micropolis), by Hans E. Kinck, and *Gnister fra peisen* (Sparks from the Fireplace) by Kristian Elster.

Literary Criticism. The volume, *Bernard Shaw og hans verker* (Bernard Shaw and His Works), contains numerous facts about the Irish playwright as well as copious quotations from his works. Arnulf Overland's *Olav Dunn* shows one artist's appreciation of another rather than a scientist's objective evaluation. In Sigurd Høsts *Ibsens diktning* (Ibsen's Works), the treatment of the Bergen period is especially good. *SWEDISH. Poetry.* Pär Lagerkvist's *Hjartats sånger* (Songs of the Heart) are love lyrics. In *Staden* (The City), Sten Selander expresses his love not so much for the city as for the human beings who dwell there. Gunnar Mascoll Silverstolpe's *Vardag* (Week days) has running through it the spirit of peacefulness and satisfaction. The "week days" which we see in these poems are more like holidays. In *Mörkret och lågan* (Darkness and the Flame), Arvid Mörne gets away somewhat from his older, rather provincial, interpretation of life.

Fiction. Two works portray the present younger generation in a highly favorable light: Gösta Atorp's *Barn av sin tid* (Children of the Times) and Gustav Hellström's *Mannen vid ratten* (The Man at the Wheel). In *Kerrmans i paradiset* (The Kerrmans in Paradise), Hjalmar Bergman gives a romantic glamor to "big business." Elin Wägners *De fem pärlorna* (The Five Pearls) is a story of war and diplomacy, involving even the United States. In *Behalf of the Accused* might be a good title for Marika Stjernstedt's *Resning i målet*. The heroine is a daughter who is driven to suicide by an unjust and unsympathetic father.

History, Literature, etc. In *Nils Rabenius*, Nils Ahnlund published his interesting discovery of the forging of historical documents more than two hundred years ago by the court preacher and favorite of Charles IX. Fredrik Bök wrote a series of interesting articles on living Swedish authors, in his *Kesa kring svenska parnassen* (Journey Around the Swedish Parnassus). Although Erik Nordeen's *Den norsk-islandska poesien* (Norwegian-Icelandic Poetry) is evidently intended for the layman rather than the scholar, it bears the stamp of the scientific investigator. David Marcus's *Knut Hamsun* gives an especially rich account of the Norwegian writer's youth. Martin Lamm, who occupies the foremost place among Strindberg scholars, contributed a second volume of *Strindbergs dramer* (Strindberg's Plays). See PHILOLOGY, MODERN.

SCARLET FEVER. The brilliant results of the new scarlet fever antitoxin were best shown in the temperature curves of the patient, where each injection was followed promptly by a temperature fall (if the temperature was above a certain mark). The concentration of serum used and the proper dose may be determined from an analysis of these curves. All other symptoms which are due to the toxin of the disease likewise yield to the antitoxin. But Dr. K. Ochsenius, a child specialist of Chemnitz, Germany, whose article in the *Münchener Medizinische Wochenschrift* for August 12, is here quoted, warned that this antitoxin would not prevent or control the secondary complications of the disease, for these were not due to the action of the toxin but to infections micro-organisms which attack the body in its weakened state. The opinions of experts differed as to the range of use of the antitoxin. In the clinic it may be well to make use of it in routine for all patients, but in private practice it is best to go by the temperature and age of the patients, for in children up to four years old mouth temperatures cannot be taken and rectal temperatures run higher than those of the mouth and axilla. In regard to the efficacy of the antitoxin in chance complications, all pediatricians are not of the opinion of Ochsenius, and some of them hold that a very early injection will prevent the development of such complications.

SCHMIDT, LEOPOLD. German writer on music, died at Berlin, April 30. He was born there, Aug. 2, 1860. While attending the Berlin University he studied music at the Hochschule für Musik. After several engagements as conductor, at Heidelberg, 1887, Berlin, 1888, Zurich, 1891, and Halle, 1895, he devoted himself to writing, and exercised considerable influence as musical critic of the *Berliner Tageblatt*, which post he filled from 1897 until his death. From 1900 to 1912 he was professor of the history of music at Stern's Conservatory, and from then on he held the same position at the Klindworth-Scharwenka Conservatory. His collected essays and reviews were published in two volumes, *Aus dem Musikleben der Gegenwart* (1908) and *Erlebnisse und Betrachtungen* (1913). He also published some chamber music and songs. An operetta, *Die Heimkehr des Odysseus*, with music arranged from unknown operettas of Offenbach, was produced with considerable success at Frankfurt in 1913.

SEASICKNESS. While new remedies for seasickness are introduced from time to time, none of them has proved of permanent and universal value, and the medical profession and public have become skeptical on the value of drugs in

this condition. However, a German physician and traveler who had made a lifelong study of the subject presented an enthusiastic report on a new modification of an old idea (H. E. Kersten in the *Münchener Medizinische Wochenschrift* for September 16). Atropin has been used to some extent as a palliative in seasickness, upon the theory that the manifestations of the latter are due to irritation of the vagus nerve, this in turn the result of the disturbed function of the organ of equilibrium, the semi-circular canals of the internal ear. Atropin possesses the power of paralyzing the vagus for the time being, but has unpleasant collateral and after effects, with the danger of poisoning in susceptible individuals. It was learned that equal parts of atropin and hyoscyamin were superior to atropin alone, and Dr. Kersten made a trial of equal parts of atropin and scopolamin, with the surprising result that in many very seasick patients nausea was immediately relieved, while apparently all those treated derived benefit. In cases where the tablets cannot be swallowed the drugs must be given in suppository. These remedies are entirely too dangerous for self-medication, and must be dispensed by the ship's doctor.

SEISMOLOGY. Several important investigations of the propagation of seismic waves have recently been carried out by Mohorovicic, Jeffreys, Gutenberg, Macelwane and others. Some of these investigators, however, differ considerably among themselves in regard to the internal structure of the earth indicated by the results of their studies. The Japanese have obtained evidence that, in a region about to be visited by an earthquake, an appreciable tilt of the ground takes place several hours before the quake occurs. Through the work of the United States Coast and Geodetic Survey, the Carnegie Institution, Macelwane and others, the United States is coming to occupy a prominent place in seismological investigation.

SELANGOR. See article on FEDERATED MALAY STATES.

SENEGAL, sən'egal'. A colony belonging to France on the west coast of Africa, under the government of French West Africa (q.v.). Total area, 74,112 square miles; population in 1921, estimated at 1,225,623, of whom 4321 were Europeans. Capital, St. Louis, with a population in 1917 of 23,326. Other important towns are: Dakar, the seat of the government-general of West Africa, and a fortified naval station; population, 1918, 25,468, of whom 2791 were French; and Rufisque, population, 11,414.

The estimated area under cultivation has been placed at 307,000 acres. Cotton is cultivated, and a wild variety is also found. The principal source of wealth consists of peanuts, and the value of the export of this commodity is three times that of all other exports taken together. In 1925 the imports were valued at 698,926,705 francs and the exports at 588,921,912 francs.

The local budget for 1926 was 85,801,324 francs. Dakar, Rufisque and St. Louis are connected by a railway 165 miles in length, and during 1926 another stretch was nearly completed between Thiès and Kayes, a distance of 435 miles. The administration is in the hands of a lieutenant-governor, assisted by a council of 40 members, 20 of whom are elected by the French citizens and 20 by representatives of the native chiefs. The colony sends one deputy to the French parliament.

SERAO, MATILDA. Italian author, died in Naples, July 25. She was born of Italian parents at Patros, Greece, in 1856. When she was four she was taken to Naples, where she received her early schooling, and then to Rome. She joined the group of young poets to which Gabrielle d'Annunzio and Scarfoglio belong; she was married to the latter. Her working career covered about half a century and during that time she wrote 30 books, 20 of which were novels. The most widely read of her novels, which have been translated into several European languages, are: *La conquista di Roma*; *Paese di Cuccagna* and *Addio amore*. She and her husband founded the newspapers, *Corriere di Napoli* and *Il Mattino*.

SERBIA. A former Balkan kingdom which was proclaimed in December, 1918, a part of the new Unitary State of the Serbs, Croats, and Slovenes. (See JUGO-SLAVIA.) It is bounded on the east by Bulgaria, on the west by Albania and Montenegro, on the south by Greece, and on the north is separated from Hungary by the Danube and Save Rivers. In the new state Serbia is divided into two provinces, North Serbia, with an area of 19,286 square miles and a population, at the census of 1921, of 2,655,078, and South Serbia, with an area of 17,651 and a population of 1,474,660. The former capital of Serbia, Belgrade, became the capital of Jugo-Slavia, and had a population in 1921 of 111,740.

SESQUI-CENTENNIAL CELEBRATIONS. See CELEBRATIONS.

SETON, THE MOST REV. ROBERT. Roman Catholic prelate, titular archbishop of Heliopolis, Egypt, and dean of all the monsignori in the United States, died March 22 at the College of St. Elizabeth, Convent Station, N. J. He was born of American parents at Pisa, Italy, Aug. 28, 1839, and after studying for three years at St. Mary's College, Maryland, entered the University of Bonn in 1856 and was graduated from the Ecclesiastical Academy at Rome in 1867. He had been made a private chamberlain to Pope Pius IX in 1866. He was made prothonotary apostolic in 1867 and in the same year, returning to the United States, became chaplain of St. Elizabeth's College. In 1876 he became rector of St. Joseph's Church, Jersey City, and continued in this charge until his retirement to live in Rome nearly forty years later. He received the degree of LL.D. from the University of Notre Dame in 1893. In Rome in 1903 he was named titular Archbishop of Heliopolis. He was Roman correspondent of the *New York Times* over the signature "Fyvie." He was the author of *Memoirs, Letters and Journals of Elizabeth Seton* (his grandmother) (1869); *The Dignity of Labor*; *Roman Essays* (1882); *An Old Family* (1899); and *Memories of Many Years*, an autobiographical work, written after his return to the United States in 1921.

SEVILLE, EXPOSITION AT. See EXPOSITIONS.

SEWERAGE AND SEWAGE TREATMENT. Concrete, plain or reinforced with steel, continued to be used for the larger sizes of main or trunk sewers in the United States, with a choice between vitrified clay pipe and concrete for intermediate sizes, and with the general use of vitrified pipe in smaller sizes, down to the 8-in. laterals which serve single streets where storm water is not removed in the same sewers as convey house sewage. A large percentage of the concrete pipe being used is precast—made in a temporary plant established in the vicinity of the sewers to be laid, then transported to the trench lines, lowered into position and jointed together. Steel reinforcement is employed to strengthen the concrete.

The most extensive additions to sewage-collecting systems in recent years have been in the Borough of Queens, New York City, where some \$16,000,000 was paid out for trunk sewers, and at Detroit, where work was in progress to provide sewers for the territory annexed in 1924-25 and also to provide intercepting sewers to bring the sewage of the city to a central point for treatment. (See 1926 YEAR BOOK.)

STREAM POLLUTION. Control of stream pollution by municipal sewage, and to a far less degree by wastes from industrial plants, is vested in State departments of health to a large degree in the Northeast and Middle West and in some of the Pacific Coast States, and to a lesser degree in the other States of the Union. In the absence of Federal control of stream pollution, except in a minor degree and to lessen its deleterious effect upon navigation, there was still comparatively little done to prevent the sewage and other wastes produced in one State from polluting the water of other States in interstate streams. Cooperative working agreements by State departments of health to cope with this condition were increasing.

SEWAGE TREATMENT. The project for a sewage-treatment plant of 180,000,000 gallons' capacity on Ward's Island in the East River, to treat the sewage of parts of the Boroughs of Manhattan and Brooklyn, was approved by the New York City authorities late in the year. The activated-sludge process was proposed. Tunnels beneath the East River, with intercepting sewers in the two boroughs, will be necessary. The project contemplated caring for the sewage of something over 1,000,000 persons, at a total cost of some \$15,000,000, including the tunnels and intercepting sewers. Ultimately, sewage from nearly 200,000 persons in Queens Borough might be brought to the site of the proposed sewage-treatment works.

At Chicago, the Sanitary District had under construction an activated-sludge plant for the North Side, designed to treat the sewage from a population of 830,000 at an estimated cost of \$17,500,000. This plant was about 90 per cent completed at the close of the year. The excess sludge from the tanks was to be pumped for 18 miles through a 14-in. cast-iron pipe to the West Side sewage-treatment plant, also under construction, where the sludge was to be united for treatment with that of the West Side plant. This plant is of the Imhoff tank type, was planned to serve 1,850,000 persons, and will cost \$19,500,000. The entire programme for the con-

struction of sewage works, intercepting sewers, and pumping plants for the Chicago Sanitary District was estimated to cost \$155,000,000, of which \$61,000,000 had been expended at the close of 1927.

In the suit brought by Wisconsin and other States against Illinois and the Chicago Sanitary District to prevent the diversion of water from Lake Michigan to the Chicago Drainage Canal for the dilution and disposal of the sewage of the district, Charles E. Hughes, acting as special master appointed by the United States Supreme Court, reported near the close of the year findings that were in favor of the Chicago Sanitary District so far as continuation of the diversion and of the present permit is concerned, while at the same time making it clear that lake diversion for the purpose indicated was entirely under the control of the Federal Government, acting through the War Department as authorized by Congress. The Hughes report had to be acted upon by the United States Supreme Court. The portion of the Hughes report dealing with questions of law may be found in *The United States Daily*, beginning Nov. 26, 1927, and abstracted at length in *Engineering News-Record*, Dec. 1, 1927.

BIBLIOGRAPHY. New books were: Martin, *The Activated-Sludge Process* (London), and Temple, *Sewage Works* (London); the latter deals with the subject briefly from the standpoint of the Far East, the author being the chief town engineer of Jamshedpur, India.

SHANTUNG, shān'tōng. One of the eighteen provinces of China proper; in dispute between China and Japan after the Treaty of Versailles; returned to China by Japan in accordance with the agreement reached at the Washington Conference of 1921-22. Area, 55,970 square miles; population, estimated at 25,810,000.

SHEEP. See LIVESTOCK; VETERINARY MEDICINE; WOOL.

SHERMAN, CHARLES COLEBROOK. American editor, died at New Rochelle, N. Y., May 8. He was born at Syracuse, N. Y., Dec. 18, 1860, and graduated at Yale College in 1883. He taught in the Hopkins Grammar School at New Haven, Conn., 1883-84, and studied at the Yale Divinity School, 1886-88, and pursued graduate studies at the Universities of Chicago and Berlin. Afterwards he was on the staff of the *Syracuse Journal*. He became religious editor of the *NEW INTERNATIONAL ENCYCLOPEDIA* in 1902, and subsequently he served as managing editor of the *Schaff-Herzog Religious Encyclopedia* (1903-07).

SHIPBUILDING. In the annual summary of the mercantile shipbuilding of the world for 1927, published by Lloyd's Register of Shipping, the total output of the year was placed at 2,285,670 tons, representing an increase of 610,702 tons. Compared with 1913, during which year the pre-war world record output was reached, the 1927 figures showed a decrease of over 1,000,000 tons, as the accompanying tabulation indicates. The *Lloyd's Register* summary does not include warships and takes into account only merchant vessels of 100 tons gross and upwards that were launched in 1927, whether they were completed during the year or were still under construction.

The total launches included 38 vessels of over 336,000 tons which were to be fitted with steam

turbines and reciprocating engines. The tonnage of vessels fitted with internal-combustion engines launched during 1927 increased, and amounted to 863,694 tons, as compared with 704,008 tons launched in 1926, and represented 62.8 per cent of the world's output of steam tonnage, as compared with 76 per cent in 1926. The tonnage of motor ships under construction at the end of 1927 was actually 115,000 tons in excess of steam tonnage under construction, demonstrating the progress which was being made by the internal-combustion engines as a means of marine propulsion. Of the total steam tonnage of 1,375,828 tons launched in the world, 470,000 tons were steamers fitted for burning oil fuel under the boilers, so that the tonnage depending exclusively on coal for propulsion amounted to 39.6 per cent of the world's total.

There were 802 vessels launched in the world during the year, of which 19 were over 10,000 tons, 95 between 6000 and 10,000 tons, and 128 between 4000 and 6000 tons. There were five vessels of 20,000 tons and upwards launched, of which the largest was the turbine ship *Cap Arcona*, 27,561 tons, built in Germany; next came the turbine steamship *Conte Grande* of 22,800 tons, built in Italy, followed by the turbo-electric *California* of 22,000 tons, built in the United States, the *Duchess of Atholl*, 21,500 tons, built in Scotland, and the turbine steamship *Orford*, 20,000 tons, built in England. During 1927, 99 tankers, of 542,437 tons, built for the carriage of oil in bulk, were launched, the number given excluding vessels of less than 1000 tons.

The countries where the largest tonnage was recorded during the year were Great Britain and Ireland, with 1,225,873 tons; Germany with 239,622 tons; the United States with 179,218 tons; Holland with 119,790 tons; Italy 101,176 tons; Denmark with 72,038 tons, and Sweden with 67,361 tons, all of these countries with the exception of Denmark and Italy showing a substantial gain over 1926, as is indicated in the accompanying table.

GREAT BRITAIN. The tonnage launched in Great Britain and Ireland, 1,225,873 tons, was 586,305 tons greater than in 1926, but 706,000 tons lower than in 1913, the pre-war record year. However, it reached 53.6 per cent of the world's output for 1927 as compared with 38.2 per cent in 1926. The distribution among the leading shipbuilding centres was as follows: The Clyde, 423,723 tons; the Tyne, 274,056 tons; the Wear, 162,770 tons; the Tees, 130,371 tons; and Belfast, 107,181 tons. There were 80 vessels launched of between 5000 and 10,000 tons each, and seven vessels of 10,000 and upwards, the largest being the turbine steamers *Duchess of Atholl* and *Orford*, and the *Laurentic*, of 18,724 tons, fitted with a combination of steam turbines and reciprocating engines, and the motor ship *Bermuda*, 16,000 tons. Excluding vessels of less than 1000 tons, 62 vessels of 305,781 tons for the carriage of oil in bulk were launched during 1927. There were launched 13 vessels with a total tonnage of 137,628 tons, to be fitted with steam turbines, including one vessel of 18,724 tons, the *Laurentic*, in which ship a combination of steam turbines and reciprocating engines was installed, as stated above. During the year British yards launched 80 motor ships of 355,779 tons, 38 of which were of 5000 tons and upwards, the largest being the *Bermuda* of about 16,000 tons.

*Returns are not available as regards Germany and Austria-Hungary for the war period (1914-18) nor as regards Germany for 1919 and 1920.

GERMANY. The 105 vessels of 289,622 tons launched in 1927 represented an increase of 109,074 tons over 1926 and were 27½ per cent of the world's output for the year as compared with Germany's proportion of 17½ per cent in 1926. The German yards launched 12 vessels of 78,670 tons fitted with steam turbines, including the largest vessel launched during the year, the *Cap Arcona* of 27,501 tons. The totals for turbine vessels included eight vessels, 31,115 tons, which had a combination of steam turbines and reciprocating engines. There were also launched 33 vessels of 115,882 tons to be fitted with oil engines, the largest being the motor tanker *O. O. Stillman*, of about 16,000 tons. Four motor tankers of 35,097 tons also were launched. Germany's total output included 14 vessels between 6000 and 8000 tons, four between 8000 and 10,000 tons and three vessels of above 10,000 tons each.

UNITED STATES. *Lloyd's Register* reported the United States' output for the year 1927 at 179,216 tons, and 28,605 tons higher than for 1926. Of the tonnage launched, 17 steamers and motor

ships of 82,754 tons and 30 barges of 24,800 tons were built on the Atlantic Coast, eight steamers of 54,948 tons on the Great Lakes and 11 vessels of 16,716 tons on the Pacific Coast. The turbo-electric vessel *California* of about 22,000 tons, built at Newport News, Va., was the largest American vessel launched during the year and was followed by the motorship *Gulfpriide* of 12,510 tons, built at Kearny, N. J. Four other vessels of between 6000 tons and 10,000 tons were launched on the Atlantic Coast and one of 10,180 tons and four between 8000 and 10,000 tons were launched on the Great Lakes. Including the *California*, mentioned above, and one other vessel of 8816 tons fitted with turbines in conjunction with electric motors, six turbine steamers of 54,916 tons were launched in the United States during the year. The motor tonnage launched amounted to 39,282 tons, and five oil tankers of 37,318 tons were launched, exclusive of tankers below 1000 tons.

HOLLAND. In addition to the vessels built for river navigation, of which Holland builds a considerable tonnage which is not included in

Lloyd's tables, the total tonnage launched in 1927 was 119,790 tons, or 26,119 tons higher than in the previous year. There were seven vessels of over 6000 each in the grand total, which included 49 vessels of 86,194 tons fitted with internal-combustion engines. There were eight motorships of 6000 tons and upwards, of which the *Christiaan Huygens* of 15,636 tons and the *Sibajak* of 12,040 tons were the largest. There were also launched four motor ships of 25,227 tons, intended for the bulk transportation of oil.

ITALY. The 1926 record of 220,021 tons, which was the largest output ever recorded for that country, was not maintained in 1927, when 101,076 tons represented the output. There were 18 vessels of 73,955 tons built in the Trieste district, as compared with an output of 94,136 tons in 1926. The year's totals comprise three vessels of 10,000 tons and upwards, the largest being the turbine steamer *Conte Grande* of 22,800 tons, launched at Trieste, and the *Ausonia* of 13,500 tons, launched at Genoa. There were launched 13 motor ships of 49,698 tons, the largest being the *Virgilio* of 11,900 tons built at Baia, near Naples.

DENMARK. The total tonnage launched during 1927 was 72,038, practically the same as in 1926; it was composed mostly of motor ships aggregating 63,690 tons. Seven of these were launched with a tonnage between 5000 and 9150 tons; six of them, with a total tonnage of 44,501 were intended for the transportation of oil in bulk.

SWEDEN. The 1927 output, 67,361 tons, was the highest ever recorded for this country, and over 92½ per cent of the total was composed of motor ships, of which eight were between 5000 and 7000 tons each. Seven tankers or motor ships, of 42,566 tons, were launched.

FRANCE. With an output of 44,335 tons, including one steamer of 9,950 tons, five motor ships of 17,076 tons, and six trawlers of over 1000 tons each, France had the lowest production recorded since 1919. The *Ile de France*, of 43,500 tons, launched in 1926, was put into service between France and New York during the year.

RUSSIA. Shipbuilding in Russia had been under development for several years, and the result was seen in 1927 in the launching of 18 vessels of 43,917 tons. These included 10 motor ships of 25,414 tons, one of which, an oil tanker, was of about 7000 tons and two were of 4957 tons each.

JAPAN. Japanese yards in 1927 launched 42,359 tons, which was the lowest recorded since 1910. The totals comprised two motor ships of 5612 tons each and two turbine steamers of about 4280 tons each.

In the United States, according to a survey conducted by *Marine Engineering and Shipping Age*, the tonnage output, based on reports from 51 American shipyards, was 43 per cent greater in 1927 than in 1926, but the work on hand at the end of the year was 45 per cent less than at the end of the previous year. The number and tonnage of ships under construction were less than for any year since the War period, and the shipyard owners had to consider the contracts being placed by the Coast Guard and the Navy Department as the most en-

couraging features for the 1928 business.

According to this survey, 694 merchant vessels of all types with a total gross tonnage of 395,620 were delivered, being the output of 51 active shipyards, as compared with 41 in 1926, 49 in 1925, and 33 in 1924. Of the vessels delivered, 45½ per cent were propelled by steam machinery, 15½ per cent were motor ships, and the remaining 39 per cent were barges or other non-propelled craft. Shipyards on the Atlantic Coast and the Gulf Coast built 50 per cent; Great Lakes yards, 22 per cent; The Western river plants 20 per cent; and the West Coast yards 8 per cent. Of the Great Lakes deliveries, large bulk freighters formed the greater proportion of the 87,000 gross tons of ships built and delivered, and at the end of the year only three medium-sized vessels remained under way, the remainder under construction being barges, tugboats, car ferries and miscellaneous small craft.

According to the Department of Commerce, on Dec. 31, 1927, American shipyards were building or had under contract to build for private shipowners 220 steel vessels of 174,230 gross tons and 62 wood vessels of 29,608 gross tons.

SHIPLEY, SIR ARTHUR EVERETT. British zoologist, died at Cambridge, England, September 22. He was born at Datchet, Buckinghamshire, Mar. 10, 1861, and was educated at University College School and St. Bartholomew's Hospital, and specialized in zoology at Christ's College, Cambridge. As early as 1887 he was made a fellow of Christ's College, and in the same year was sent by the Colonial Office to investigate plant diseases in the Bermudas. He won many honors for his work, and received degrees from Princeton, the University of Michigan and Drexel Institute, Philadelphia, in addition to those conferred upon him in England. He was translator in part of Weismann's *Essays on Heredity* (2 vols., 1889-92), was a joint editor of the *Cambridge Natural History* (1905-09), and co-editor of *Parasitology* and of the *Journal of Economic Biology*. He wrote *Zoology of the Invertebrate* (1893); *Pearls and Parasites* (1908); *The Minor Horrors of Wars* (1915); *More Minor Horrors* (1916); *The Voyages of a Vice-Chancellor* (1919); *Cambridge Cameos* (1924).

SHIPPING. The total tonnage of the world's merchant fleets in June, 1927, as compiled by Lloyd's *Register of Shipping*, amounted to 59,688,000 tons, as compared with 42,514,000 tons in June, 1914, an increase of over 17,000,000 tons. These figures disregard sailing vessels and wood steamers, in view of their comparatively small importance in international trade. In these totals in the 13-year period a number of remarkable changes had occurred. Tankers had increased from 1,479,000 tons to 5,916,000 tons, and motor ships, including sailing vessels fitted with auxiliary power, from 234,000 tons to 4,271,000 tons. In 1914 the tonnage of the steamers fitted for oil fuel was 1,310,000 tons, while 18,500,000 tons were thus equipped in 1927.

In the United States, at the end of 1927, active seagoing shipping under the American flag was considerably greater than on Jan. 1, 1926. Privately owned tonnage had increased by more than 500,000 gross tons, principally in the following lines of employment: Foreign trade, general cargo carriers, 189,000 tons, and tankers, 92,000 tons; coastwise trade, general

NOTE.—A considerable number of vessels which were not completed appear in this table. Steamers of less than 100 tons gross and sailing vessels of less than 100 tons net are not included. Vessels trading on the Caspian Sea and wood or composite vessels trading on the Great Lakes of North America are not included. In the absence of satisfactory information, the records of most of the sailing vessels belonging to Greece, Turkey, and southern Russia are omitted from this table. Japanese sailing vessels are not recorded in Lloyd's Register and therefore do not appear in this table. Under the heading "Country not stated," are included all vessels entered in Lloyd's Register without record of flag because definite information had not been received at the time of going to press, and under "Other countries" are grouped the figures for a number of countries because the tonnage owned by each country is comparatively small and therefore is not shown separately.

cargo carriers, 12,000, and tankers, 123,000 tons. The Shipping Board tonnage had increased by 58,000 tons, general cargo carriers in the foreign trade accounting entirely for this amount.

During the year there were heavier cargo movements, which indicated that world shipping had come out of the post-war depression and that a gradual but steady improvement in overseas trade was likely. Of course, it was realized that during the latter half of 1926, on account of the coal strike in Great Britain, there had been an abnormal increase of activity in the carrying of coal from the United States to Great Britain with the inevitable reaction. As a result, there was a slight increase in idle shipping during 1927, which, however, was not as large as on Jan. 1, 1926, when it was estimated that some 5,760,000 gross tons were laid up in the various maritime countries. This amount declined during that year, so that on Jan. 1, 1927, the idle shipping amounted to 4,904,000 gross tons; this decreased during 1927, so that, on Dec. 31, the amount laid up was estimated at 4,331,000 gross tons. In other words, at the end of the year 1927 there was 25 per cent less shipping laid up than at the beginning of 1926. The status of the principal maritime countries is shown in the accompanying table, from the Transportation Division of the U. S. Bureau of Foreign and Domestic Commerce.

* October 1.

* July 1.

* Refers mainly to shipping of countries listed above.

According to statistics of the United States Shipping Board, the American foreign trade in the calendar year 1926 required the services of 5761 vessels, aggregating 26,330,000 gross tons. Ships of 32 foreign countries were represented among the carriers of American freight and passengers. Of the total number of ships entering or leaving United States ports during 1926, more than two-thirds sailed under the flags of other countries. American ships numbered 1678, with an aggregate gross tonnage of 7,336,000. American vessels were proportionately more numerous in the tanker traffic than in the other trades. Of a total of 594 tankers, aggregating 3,700,000 gross tons, 250, aggregat-

ing 1,620,000 gross tons, were American. Of a total of 444 combination passenger-cargo ships, aggregating 3,800,000 gross tons, 127 ships, aggregating 838,000 gross tons, were American. Of a total of 4000 general cargo carriers, aggregating 18,000,000 gross tons, 993, aggregating 3,640,000 gross tons, were American. Included in the preceding were 347 sailing vessels aggregating 280,000 gross tons, and of that number 205, aggregating 190,000 gross tons, were ships carrying the American flag.

Total exports during the year were 68,373,000 long tons. Imports amounted to 44,888,000 long tons of cargo. The total number of entrances and clearances was 58,400.

In the fiscal year 1925, charges paid for the carriage of 93,000,000 long tons of freight amounted to approximately \$600,000,000. At similar rates the nation's freight bill for 1926, on 113,000,000 cargo tons, exceeded \$728,000,000. A conservative estimate indicated that \$480,000,000 of this total was paid to foreign shipping companies. On Oct. 1927, the privately owned American merchant marine included 1230 steam and motor vessels of 1000 gross tons and over, with a total gross tonnage of 6,034,845, more than 91 per cent of this tonnage being in active service on that date. Of this number, however, only 170 vessels were engaged in overseas foreign trade, the remainder of the active fleet being employed on coastwise and Caribbean routes. The Shipping Board fleet of Oct. 1, 1927, included 801 vessels, 280 of which were engaged in overseas foreign trade routes.

SHIPWRECKS. See SAFETY AT SEA.

SHOES, SHOE INDUSTRY. See BOOTS AND SHOES.

SHOOTING. An international small-bore rifle match featured shooting competition in 1927. The British team, which had won a similar contest in 1926, scored a total of 7803 points, shooting over the English ranges in August. The United States team went into action at Camp Perry, Ohio, in September, and exceeded the British total by four points, thereby establishing a new world's record. An international team rifle contest held during the year was won by Switzerland, Sweden finishing second and the United States third. In the individual small-bore test, however, Lawrence Mueslein of the U. S. Army was victorious, the individual free rifle honors going to M. M. Hartman of Switzerland. R. M. Cutts, Jr., a lieutenant in the U. S. Marine Corps, won the U. S. rifle championship.

The Grand American trapshooting tournament resulted in Otto Newlin, of Georgetown, Ill., winning the handicap contest. The national amateur title went to S. M. Crothers, of New York City, while Fred S. Tomlin of Glassboro, N. J., retained his professional championship. Mrs. H. H. Harrison of Rochester, N. Y., captured the women's crown.

SIAM, si-am'. A monarchy in southeastern Asia, bounded by Burma on the west, French Indo-China on the east, and the Gulf of Siam on the south. Capital, Bangkok.

AREA, POPULATION, ETC. The area is estimated at 200,148 square miles and the population, according to the census of 1919-20, 9,207,355; estimated in 1925-26, 9,831,000. Buddhism is the prevailing religion. On Mar. 31, 1926, there were 16,165 Buddhist temples and 129,206 priests. On Mar. 31, 1925, government schools

numbered 343, including 236 secondary departments, with 47,268 pupils and 1958 teachers. There were also 65 special (technical) departments in government schools with 1101 pupils, principally for the training of teachers. Local schools numbered 4707, with 527,603 pupils and 9872 teachers. Private schools numbered 573, with 27,435 pupils and 1446 teachers. Over 90 per cent of the local schools and 60 per cent of the government schools are situated in temples. There is a university at Bangkok.

PRODUCTION. The principal occupation of the people is agriculture, and the chief article of production as well as of export is rice. The area under rice in 1925-26 was 4,076,900 acres and the yield 2,209,900 tons. The livestock on Mar. 31, 1926, consisted of 8389 elephants, 247,158 horses and ponies, 4,013,882 bullocks and 4,216,127 buffaloes. The forest resources are extensive and teakwood is an important product, the exploitation of which is almost entirely in the hands of the British. The mineral resources are varied and extensive and include coal, zinc, tin, iron, tungsten, wolfram, manganese and antimony. The output of metallic tin in 1925-26 was 7885 tons.

COMMERCE. Exports for the whole Kingdom of Siam for the fiscal year ended Mar. 31, 1927, amounted to 239,260,000 ticals (\$107,670,000). Compared with the previous fiscal year, Siam's exports registered a decrease of 5,500,000 ticals (\$2,475,000). Despite the fall in exports, imports in 1926-27, amounting to 196,520,000 ticals (\$88,343,000), showed a gain of 15,143,000 ticals (\$6,814,000) over receipts of the previous fiscal year. The country's normally favored relations of exports to imports was not altered, however, the excess of exports amounting to 43,000,000 ticals (\$19,350,000) for the year ended Mar. 31, 1927.

FINANCE. The budget for 1926-27 estimated ordinary revenues at 94,000,000 ticals and ordinary expenditures at 93,788,188 ticals leaving a surplus of 211,812 ticals. The public debt of Siam on Mar. 31, 1927, stood at £12,117,659.

COMMUNICATIONS. In 1925-26, 987 vessels of 1,045,814 tons entered and 987 of 1,044,049 tons cleared from the port of Bangkok. On June 30, 1926, 1631 miles of state railways were open to traffic and 281 miles were under construction.

GOVERNMENT. Executive power is vested in the King, who is assisted by a consultative ministry comprising nearly all the King's relatives; and legislative power in a council composed of the state ministers and members appointed by the crown. King in 1927, Prajadhipok, born Nov. 8, 1893, succeeded to the throne on the death of his brother, Rama VI, on Nov. 26, 1925.

SIBERIA. The northern Asiatic part of Russia. Area, estimated in 1926 at over 5,000,000 square miles; population in 1924 estimated at 12,800,000. Rich and important as were the mining, forest and fur resources of Siberia, 90 per cent of the population lived in rural districts, and the most important productive activities were agriculture and the industries allied with it. This condition was likely to persist for many years, as it would take much capital not yet available, and a long period of time, to develop Siberia industrially. Siberia is one of the world's important sources of furs, and trapping is of considerable economic importance over large portions of the country, particularly in the

forest and tundra region. The development of the mineral wealth of Siberia is second in importance only to the development of its agriculture. The industries of Siberia include flour mills, distilleries, breweries, tanneries, and soap and tallow works. In 1927, the acreage of crops in Siberia was estimated at 7 per cent above that in pre-war times, and of that acreage wheat occupied over 50 per cent, as against 35 per cent in 1923. Livestock was increasing in numbers, with horses nearly as numerous as in pre-war times, cattle 20 per cent more numerous, and sheep and goats twice as numerous. The gross value of the industrial output for the past two years had increased by 100,000,000 rubles (gold). The trade turnover was nearing the 1,000,000,000-ruble mark, whereas two years previously it aggregated only 500,000,000 rubles. In its plans for the development of Siberia, the Soviet government gave first place to the basic industries, such as coal and gold mining and metallurgical work, and second place to the more profitable of other industries, such as wood-working, paper, glass, and pottery, and the production of agricultural implements. See *RUS-
SIA*.

SIERRA LEONE, se-er'ra le-o'ne. A British colony and protectorate on the west coast of Africa; bounded by French Guinea on the north and Liberia on the east and southeast. The approximate area of the colony is 4000 square miles and the population, according to the census of 1921, 85,163, of whom 1161 were Europeans. The chief town is Freetown, with a population in 1921 of 44,142. The birth rate in 1925 was 23.4 per thousand and the death rate 22.9 per thousand, infant mortality being 245 per 1000 registered births. Freetown is the chief seaport in West Africa, being a coaling station and the headquarters of the British Imperial forces in West Africa. Vessels entered and cleared in the foreign trade in 1925 had a tonnage of 3,737,084. The total exports in 1926 amounted to £1,713,646; imports £1,844,122; revenue (1925), £945,581; expenditure, £843,321; public debt, £1,729,848. The total railway mileage open to traffic, with sidings, was 356 miles. The receipts from all sources for 1925 amounted to £231,889, as compared with £219,046 in 1924, which constituted a record. Passengers carried in 1925 numbered 587,944, as compared with 543,918 in 1924.

The protectorate is situated between 6° and 10° N. latitude and 10° and 14° W. longitude, and its greatest extension inland is 180 miles. Area, 27,000 square miles; population, according to the census of 1921, 1,456,148, of whom 1,450,903 were natives. The chief exports are palm kernels, kola nuts, and palm oil. It is divided into three provinces, with a European commissioner at the head of each. The governor and commander-in-chief of the colony is also governor of the protectorate. He is assisted by an executive and legislative council. Governor and commander-in-chief in 1927, Sir A. R. Slater.

SIKIMOTOXIN. See *CHEMISTRY*, under *Biochemistry*.

SILESIA, si-le'sha. The term applied to (1) a former division of the Austro-Hungarian Empire; (2) a province of Prussia. The former, previously a crownland of Austria, became after the war a part of the new republic of Czechoslovakia (q.v.). Its area is 1708 square miles;

population, according to the census of 1921, 672,268. The province of Silesia in Prussia was originally the largest division of that state, with an area of 15,573 square miles and a population of 5,225,962 in 1910. After a plebiscite in 1921, Upper Silesia was divided between Germany and Poland, leaving under the control of Prussia an area of 14,022 square miles (Upper and Lower Silesia), with a population in 1925 of 4,504,103; and transferring to Poland an area of 1240 square miles, with a population of 891,669 in 1921.

SILK. An International Silk Congress met at Milan in June and during a four-day session discussed the future of the silk trade and industry in their international relations. The world's production of silk, although the smallest in volume among the textiles, was only surpassed in value by cotton, and it was estimated by Signor Giorgio Mortara, professor at the Royal University at Milan, to have an annual gold value of \$1,000,000,000. Where formerly the European market was able to hold its own, now Japan and other Asiatic countries were the leading producers of raw silk, so that

to finance quantities of raw silk. It was believed that the financial and curtailment plans put in force had acted to stabilize the raw silk market, not only in Japan but in America and Europe. The Raw Silk Association of Japan was not only working on market conditions but was seeking to adopt standard grading of raw silk which would be accepted internationally and by which the product would be tested and classified on a standard basis.

The United States imported silks and manufactures of silk to a total value of \$441,245,492 during 1927, as compared with \$443,245,399 in 1926. The amount of raw silk imported in 1927 increased by 7,582,401 pounds over 1926, the total imports amounting to 74,004,593 pounds, as compared with 66,422,192 pounds in 1926, although the value in 1927, which was \$390,365,475, showed a decrease as compared with \$392,759,684 in 1926. Japan in 1927 sent 61,796,561 pounds, valued at \$334,160,383, and China 10,787,770 pounds valued at \$49,774,659. In 1927 the imports of silk waste totaled 12,280,765 pounds, valued at \$8,650,206, an increase in quantity but a decrease in value as

* The production of raw silk in China is an unknown quantity.

† Excludes tussah silk.

The domestic consumption of raw silk (including tussah) in China is estimated to be 52 per cent of the production. The exports from Canton and Shanghai during the season 1926-27 were 19,500,000 pounds, which would indicate a crop of approximately 42,000,000 pounds.

The Japan crop is estimated at 76,100,000 pounds.

even the silk market of Italy was more or less dominated by Japan, while that of France was subsidiary to the United States. On the other hand, there had been a large increase in the consumption of raw silk and in its use in various manufactured fabrics. During the year the prices for Japanese raw silk, which were fairly strong until midsummer, declined to a low point, although in the last weeks of December there were evidences of a strengthening of the market.

During the year the Raw Silk Association of Japan was working in connection with the Agricultural Department of that country to stabilize the industry and prevent the uncertainties that had marked this crop in previous years. The Agricultural Department extended financial aid to Japanese farmers to the extent of more than 50,000,000 yen, and on Oct. 29, 1927, an Imperial Raw Silk Company, Ltd., with a capital of 5,000,000 yen, was formed, with the understanding that it would receive coöperation from the Bank of Japan in order

compared with 1926 figures. The imports of manufactures of silk in 1927 aggregated in value \$42,157,958, as against \$40,569,818 in 1926. The 1927 imports included: Spun silk, 873,479 pounds, valued at \$2,102,930; broad silks (except pile fabrics), 3,526,274 pounds, \$17,861,546; bolting cloths, 23,975 pounds, \$605,301; pile fabrics, 707,594 pounds, \$4,598,207; silk wearing apparel, \$8,479,305; and silk laces and embroideries, \$4,314,757. In 1927 the United States exported silk manufactures to the amount of \$15,297,829, as compared with exports of \$17,788,377 in 1926.

According to the Silk Association of America, during 1927 there were imported 552,441 bales or a monthly average of 46,037, as compared with 504,200 bales, or a monthly average of 42,017, in 1926. At the end of December there were 53,540 bales in stock as compared with 52,627 at the end of January, and 52,478 at the end of December, 1926, and 47,326 at the end of January, 1926. The approximate deliveries to American mills during 1927 amounted to

551,379 bales, or a monthly average of 45,948, as compared with 501,546 bales, or a monthly average of 41,796, in 1926.

SILK, ARTIFICIAL. See RAYON.

SILVER. The world's production of silver in 1926, as given by the Director of the Mint of the U. S. Treasury Department, was 253,587,088 fine ounces, valued at \$159,437,803. This was the largest production for any one year and established a record for all time. At the end of 1927 competent authorities estimated the production for that year at practically the same amount. Handy & Harmon of New York stated the quantity at 251,000,000 ounces, of which the United States supplied 59,000,000 ounces, Mexico 102,500,000 ounces and Canada 22,200,000 ounces. The average price of silver for the year was 56.37 cents, as compared with 62.107 cents in 1926. The low price of the metal was said to be sufficient to cause some curtailment in the production from dry and siliceous ores, but, on the other hand, larger amounts of silver were becoming available as a by-product of copper and lead ores. Production of silver in the United States for 1927 was estimated at about the same quantity as in 1926 but Mexico, Austria and Burma were expected each to show small increases, which would counterbalance decreases in Canada, Peru and Bolivia. These seven countries were responsible for 88 per cent of the world's production of silver in 1926.

In the United States there was again a reduction in the output of silver in 1927 as compared with the prior year, the decline amounting to 4,072,124 ounces. In 1915, the year of largest domestic production, silver totaled 74,961,075 ounces.

UNITED STATES PRODUCTION OF SILVER, 1927

States	Silver	
	Ounces	Value *
Alaska	556,825	\$315,720
Arizona	6,666,886	3,779,841

Total production	58,646,622	33,252,695

* Value at 56.7c. per ounce, the average New York price of bar silver.

Exports and imports of silver from and into the United States for the calendar year 1927 compared as follows with earlier years:

Year	Exports	Imports	Excess or Loss
1927.....	\$75,825,000	\$55,074,000	— \$20,551,000
1926.....	92,258,000	69,596,000	— 22,662,000
1925.....	99,127,000	64,595,000	— 34,532,000
1924.....	109,891,000	78,944,000	— 35,947,000
1923.....	72,468,000	74,458,000	+ 1,985,000
1922.....	62,807,000	70,806,000	+ 7,999,000

SIMMONS COLLEGE. A non-sectarian college for women at Boston, Mass.; founded in 1899. The enrollment on Nov. 1, 1927, was 1461, distributed among the following schools: Household economics, 286; secretarial studies, 483; library science, 213; general science 67; social work, 161; Prince School of Store Service Education, 62; public health nursing, 186; students in economic research, 3. There was an enrollment of 270 in the summer session. The faculty numbered 134, including three on leave of absence and six new appointments for the year. The productive funds of the institution amounted to \$3,288,282.18, and the income for the year was \$463,930.54. The library contained 42,000 volumes. President, Henry Lefavour, Ph.D., LL.D.

SINGAPORE. See STRAITS SETTLEMENTS.

SINGING. See MUSIC.

SISOWATH. King of Cambodia, died at Pnompenh, Cambodia, Indo-China, August 10. He was born at Bangkok in 1840, before Cambodia came under French rule, being the second son of the king then reigning over a considerably larger territory than the present Cambodia. When his brother, Norodom, became king on the death of his father, Sisowath became "second king." Norodom died in 1904, and Sisowath then became uncrowned king of Cambodia, his coronation not taking place until 1906. By this time Cambodia had passed through the vicissitudes of agreement, revolt, and the partial restoration of native administration, and the affairs of the country had become settled under French control, leaving large powers of self-government in the hands of a native council. King Sisowath throughout his reign supported the French commissioner with consistent friendship, and was himself regarded as one of the most enlightened personages in his realm. He visited France shortly after his coronation.

SKATING. Charles Gorman of St. John, N. B., for the second successive year was the leading figure in the U. S. amateur skating world. Gorman won the international outdoor and indoor championships and the Middle Atlantic title, and finished in a tie with Harry Nelson of Chicago for the national outdoor crown. Gorman's best showing was in the international indoor meet held at Pittsburgh, where he retained his title by winning every major event except the three-mile race. Miss Leila Brooks of Toronto successfully defended her women's international title and she also captured the Middle Atlantic outdoor championship. The women's national outdoor laurels went to Miss Elsie Muller of New York City. In the fancy skating competitions Nathaniel W. Niles of Boston won the men's title, while Miss Beatrix Loughran of New York City captured the women's crown. Evensen of Norway won the world's title at Tammerfors, Finland, with Thunberg of Finland second.

SLATE. The value of the slate sold at the quarries of the United States in 1927 was \$10,873,000, according to estimates furnished by producers to the U. S. Bureau of Mines. This was 12 per cent less than the value reported for 1926. Decrease in demand, especially during the last six months of the year, and lower prices, due to keen competition, were general in the slate industry during 1927. Quarries were reported idle, and several firms discontinued business. Consolidation was also noted.

SMITH, FRANK L. See UNITED STATES, under 70th Congress, First Session.

SMITH, HENRY PRESERVED. American theologian and Orientalist, died at Poughkeepsie, N. Y., February 25. He was born in Troy, Ohio, Oct. 23, 1847, and graduated at Amherst, 1869, and at Lane Theological Seminary, 1872. He studied at the Universities of Berlin and Leipzig, and was ordained to the Presbyterian ministry in 1875. He was appointed a professor at Lane Seminary in 1877. In 1891, in an address on "Biblical Scholarship and Inspiration," he urged a distinction between inerrancy and inspiration, and, for his attack on the former doctrine he was tried by the Presbytery of Cincinnati and suspended. Subsequently he entered the ministry of the Congregational Church. From 1898 to 1906 he was a professor at Amherst, then going to the Unitarian Theological Seminary at Meadville, Pa. (1907-13). He served as chief librarian and professor at the Union Theological Seminary, New York, until 1926. He published *Inspiration and Inerrancy* (1893); *The Bible and Islam* (1897); *A Commentary on Samuel* (1899); *Old Testament History* (1903); *The Religion of Israel* (1914); *Essays in Biblical Interpretation* (1921), and *The Heretic's Dissent* (1926), which was the story of his own experiences.

SMITH, JAMES, JR. Former United States Senator from New Jersey, died at Newark, N. J., April 1. He was born at Newark in 1851, and was educated at Wilmington College. Engaging in business, he later became a manufacturer of patent leather. Interested in politics as a Democrat, he served in the Senate for one term, 1893 to 1899, afterwards becoming the chief leader of the Democratic party in New Jersey. In 1904 he became president of the Federal Trust Company, and after 1915 he ceased to be prominent in politics.

SMITH, JESSE MERRICK. American consulting engineer and patent expert, died at New York, April 1. He was born at New York in 1849, and received his scientific education at Rensselaer Polytechnic Institute, Troy, N. Y., and at the École Centrale des Arts et Manufactures, Paris, France. After engaging in blast-furnace construction and coal mining in Pennsylvania, in 1880 he went to Detroit, Mich., and remained there for 18 years as a consulting expert and designer of special machinery for manufacturing plants and power stations. He was president of the American Society of Mechanical Engineers in 1909, and was in consulting practice and an expert in patent litigation in New York from 1898 to 1914.

SMITH COLLEGE. A non-sectarian college for women at Northampton, Mass., founded in 1871. The enrollment for the autumn of 1927 was 2140, including 75 graduate and four non-collegiate students. There were 225 faculty members. The productive funds amounted to \$4,987,413.58, and the income from these funds to \$274,179.59. The library contained 146,000 volumes. Spending the year in study in France were 42 members of the junior class. The William Allan Neilson Chair of Research was established in the Spring by friends and admirers of Dr. Neilson, in honor of the tenth year of

his presidency at Smith, and Dr. Kurt Koffka, formerly Professor of Psychology at the University of Giessen, was elected to the chair for a term of five years; Dr. Alexander Mintz, a Russian psychologist, was appointed as research associate in the department, together with a graduate student, to assist Dr. Koffka. President, William Allan Neilson, Ph.D., L.H.D., LL.D.

SMITHSONIAN INSTITUTION. An organization founded in 1846, according to the terms of the will of James Smithson of England, who, in 1826, bequeathed his property to the United States of America to "found at Washington, under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men." In receiving the property and accepting the trust, Congress determined that the Federal government was without authority to administer the trust directly, and therefore constituted an "establishment" whose statutory members are the President, the Vice President, the Chief Justice, and the heads of the executive departments. The affairs of the Institution are administered by a Board of Regents, whose membership consists of the Vice President, the Chief Justice, three members of the Senate, and three members of the House of Representatives, together with six other persons, other than members of Congress, two to be residents of Washington and the other four of different States. The Chancellor of the Institution in 1927 was Chief Justice Taft.

The Institution administers the following bureaus: The National Museum, the National Gallery of Art, the Bureau of American Ethnology, the International Exchange Service, the National Zoological Park, the Astrophysical Observatory, and the United States Regional Bureau of the International Catalogue of Scientific Literature. It also administers the Freer Gallery of Art.

The Institution's researches on the radiation of the sun, under the direction of Dr. C. G. Abbot, were continued during the year. A remarkably regular periodicity of 25½ months in the variation of the sun's radiation was found by Dr. Abbot. Many other researches in various phases of geology, biology, anthropology and astrophysics were carried on under the direction of the Institution.

The outstanding publication of the Institution for the year was a 1200-page work entitled *World Weather Records*, which made available to meteorologists for the first time a long homogeneous series of weather records from all parts of the world. During 1927 there were issued 119 volumes and pamphlets, of which 182,846 copies were distributed to libraries, educational institutions and individuals.

The income of the Institution, averaging about \$65,000, is derived from interest on its endowed funds, which in 1927 amounted to a little over \$1,000,000. It is also charged by Congress with the disbursement of the government appropriations for the support of the bureaus under its administrative charge. Dr. Charles D. Walcott (q.v.), secretary of the Institution since 1907, died Feb. 9, 1927, and Dr. C. G. Abbot became acting secretary at that time. The assistant secretary was Dr. Alexander Wetmore.

SMUT OF WHEAT. See BOTANY, under *Plant Diseases*.

SNOW REMOVAL FROM HIGHWAYS. See ROADS AND PAVEMENTS.

SOAPSTONE. See TALC AND SOAPSTONE.

SOCCER. Soccer continued on its amazing advance in popularity in 1927, particularly in the United States. Five countries sent powerful elevens to America, thus providing a decided international flavor to the year's competitions. The famous Hakoahs from Austria, the Olympic champions from Uruguay, a workingmen's team from England, a Palestine eleven and the Royal Madrid Club from Spain all made more or less extended tours of the United States.

Bethlehem won the championship of the American Soccer League, composed first of 12 and later 10 clubs, but the Fall River eleven captured the National Challenge Cup, emblematic of the professional championship of the United States. The Heidelberg, Pa., eleven won the national amateur title, while the college championship went to Princeton University. The annual international match between England and Scotland resulted in a tie, but England triumphed in turn over France, Belgium and Luxemburg. Cardiff City won the English Cup series and the eleven of Oxford University defeated that of Cambridge.

SOCIAL ECONOMICS. See CHILD LABOR; COÖPERATION; LABOR LEGISLATION; MATERNITY PROTECTION; MINIMUM WAGES; OLD-AGE PENSIONS; STRIKES AND LOCKOUTS, ETC.; also LITERATURE. ENGLISH AND AMERICAN.

SOCIAL INSURANCE. See UNEMPLOYMENT; WORKMEN'S COMPENSATION; MATERNITY PROTECTION; OLD-AGE PENSIONS.

SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR. This international Association, of which the Association for Labor Legislation is the American section, was created in 1925 by amalgamating three former allied organizations, the International Association for Labor Legislation, the International Association on Unemployment and the International Social Insurance Committee. At its second meeting held at Vienna Sept. 13 to 18, 1927, 17 countries were represented by delegates from national sections of the Association. In addition the governments of 13 countries, and the International Labor Office sent representatives. Prof. Irving Fisher and Otto T. Mallery represented the American section.

Resolutions adopted at Vienna by the International Association for Social Progress (published in full in *Industrial and Labor Information*, vol. xxiv, No. 1, Oct. 3, 1927, pp. 7-13) include (1) labor protection and efficiency; (2) principles of unemployment insurance; (3) credit control; (4) social consequences of rationalization; (5) international labor conventions; (6) maternity insurance and protection of the family.

LABOR PROTECTION AND EFFICIENCY. The Association recognizes the importance of the official German inquiry on the relation between output, working hours and wages. Without discussing in detail the methods employed by this inquiry, the Association considers that it offers

a sound scientific basis for future investigations by the different national sections.

PRINCIPLES OF UNEMPLOYMENT INSURANCE. The Association "considers that unemployment insurance should, where such is not already the case, be made compulsory." Additional principles laid down and amplified in the Association's resolution include the following: In no case should an insured unemployed worker be compelled by the insurance authorities to accept a job which would involve any economic, physical or moral degradation. Unemployment insurance benefits should be withheld in case of unemployment due to a trade dispute. Workers should not lose their right to benefit merely by reason of their employment being of a seasonal kind and subject to more or less clearly defined slack periods. No discrimination under unemployment insurance against foreign workers. Intermittent unemployment should be covered.

Unemployment insurance system should always include an employment service of the highest possible efficiency, and cooperate closely with other organizations aiming to prevent or reduce unemployment, such as agencies for stabilizing employment through advance planning of public works. Compulsory unemployment insurance should be administered with the active cooperation of responsible representatives of employers' and workers' organizations.

In fixing the scale of benefits, account should be taken of the normal earnings of the workers; no distinction should be made between the sexes. In case of prolonged unemployment, benefit period should be lengthened. While the method of providing for the cost of unemployment insurance may vary in different countries, it is generally desirable that this cost should be shared among the public, the employers and the workers. The Association affirms "that in the opinion of the majority it is important to unite all industries and trades to face the risk of unemployment and to insure that they should all belong to the same general system of unemployment insurance."

The Association publishes a periodical *L'Avenir du Travail*, edited by Dr. Stephane Bauer, at the international headquarters at Basle, Switzerland.

SOCIETY OF CHEMICAL INDUSTRY. See CHEMISTRY, INDUSTRIAL.

SOILS. The trend of thought and practice in the United States was strongly toward the more selective and discriminating use of soils rather than toward extension of the tillable area, only those soils being used which would give the most profitable return on the labor expended. As a result, the areas devoted to pastures and woodland were being increased, and reclamation of additional land was being discouraged.

With this selective use of lands, there has been a disposition to employ more scientific methods of increasing soil productivity. However, as Sir John Russell recently pointed out, there is no pressing necessity for or evidence

of any great increase in output per acre, although the cost of labor has increased and will continue to increase the cost of the output per man. The situation in the United States is thus stated by Dr. O. E. Baker of the U. S. Department of Agriculture: "The area of land under cultivation has decreased, the production per acre has remained stationary, there are fewer farmers, prices are lower—and yet the American people are securing from the land more to eat and wear."

The application of science in the study and more efficient use of the soil received an impetus during the year through the First International Congress of Soil Science, which was held in Washington from June 13 to 22, 1927, under the joint auspices of the International Society of Soil Science and the American Society of Agronomy.

While the deliberations of the congress covered a wide range, special emphasis was placed upon soil survey and mapping, and a world-wide interest in this subject was disclosed. The making of soil surveys and maps was going on actively in many countries. A general map of the soils of Europe was issued during the year under the auspices of the International Society of Soil Science, and a similar map of the soils of the United States, which had been in course of preparation for several years, was completed. The latter map was based on detailed surveys made by the Bureau of Soils, which by 1927 had covered 331,869 square miles, and on reconnaissance surveys 579,938 square miles, and represented all of the more important types of soils of the country. The bureau made during the year detailed surveys of 23,199 square miles and reconnaissance surveys of 5676 square miles.

Soil erosion has recently been receiving increased attention. The dire consequences of unrestrained and aggravated soil erosion are typically and acutely illustrated in China (See *Geographical Review*, April, 1927, pages 226-235).

It has been estimated that soil erosion costs the farmers of the United States \$200,000,000 a year, removing 126,000,000 pounds of plant food annually, or 20 times as much as is removed by cropping. It also makes large areas of land untillable and increases the expense for fertilizer to restore the lost fertility. The Department of Agriculture has undertaken to determine why certain kinds of soils erode easily and others resist erosion, in order to find more effective methods of prevention.

BIBLIOGRAPHY. Especially valuable additions to sources of information on soils during the year were a revised and enlarged edition of *Soil Conditions and Plant Growth*, by E. J. Russell (London, 1927); *Principles of Soil Microbiology*, by S. A. Waksman (Baltimore, 1927); abstracts of papers presented at the Congress of Soil Science, and three bibliographical contributions from the Library of the U. S. Department of Agriculture, issued in mimeograph form, as follows: *Bibliographical Contributions 13, A Classified List of Soil Publications of the United States and Canada*; 14, *List of the Publications on Soils Issued by the U. S. Department of Agriculture, 1844-1926*, compiled by E. B. Hawks and C. Trolinger; 15, *List of the Publications on Soils Issued by the State Agricultural Experiment Stations of the United States Through*

1926, compiled by C. L. Feldkamp and C. E. Pennington.

SOLIS-COHEN, JACOB (DA SILVA). American physician and author, died in Philadelphia, Pa., December 22. He was born in New York, Feb. 23, 1838, and had his early education at the Central High School, Philadelphia. He graduated in medicine at the University of Pennsylvania in 1860 and served as a surgeon in the Union Army and the U. S. Navy during the Civil War. Dr. Solis-Cohen won three medals during the Civil War and finally received the Congressional Medal of Honor nearly fifty years after the war ended. He began private practice in Philadelphia in 1860 and before long was an international authority on laryngology. His removal of a laryngeal cancer in 1867 is said to have been the first successful operation of its kind. He was an honorary professor at Jefferson Medical College, Philadelphia, emeritus professor at the Philadelphia Polyclinic and College for Graduates in Medicine, and lectured extensively on diseases of the throat. One of the founders of the American Laryngological Association, he served as its president for two terms. His numerous writings, which include *A Treatise on Inhalation, Diseases of the Throat, Croup in its Relation to Tracheotomy, and The Throat and the Voice*, are considered authoritative reference books on the diseases of the throat.

SOLOGUB, FEODOR (FEODOR KUGMICH TETERNIKOV). Russian author, died in Leningrad, December 5. He was born in St. Petersburg in 1863, and studied and taught at the Teachers' Institute there until 1907. His first great success, *The Little Demon*, appeared in 1907, and among other published works were *The Sorcery of Death*; *The Created Legend*; *The Old House*, and *The Sweet Scented Name*. In 1921 Sologub and his wife, a well known critic, suffered severe privations in Russia and were permitted eventually to leave the country. On the day set for their departure the author's wife disappeared, and her body was found in the River Neva.

SOLOMON, SOLOMON JOSEPH. British artist, died at Birchington, Kent, July 27. He was born in London in 1860, and was educated at private schools. He received his first artistic training at Heatherley's, proceeding thence to the Royal Academy Schools, and afterwards to the Munich Academy, and to the Ecole des Beaux Arts, Paris, where he studied under Cabanel. After a tour through Europe and North Africa, Solomon returned to Paris and exhibited in the Salon a portrait which met with general approval. He exhibited his first picture at the Royal Academy, London, in 1881, but it was not until five years later that he came into prominence with "Cassandra." It was followed the next year by "Samson," and then in regular succession came "Niobe," "The Judgment of Paris," and "The Birth of Love." The popular success of these canvases led to Solomon's election, in 1896, as A. R. A., full honors as an R. A. coming ten years later. His most noteworthy portraits were of Mrs. Patrick Campbell (1893); Israel Zangwill (1894); Lady Swaythling (1924). In 1918 he was elected president of the Royal Society of Artists. During the World War Mr. Solomon developed a plan for camouflage and he was in camouflage service until the end of the war. He published *The Practice of Oil Painting* (1910).

SOMALI COAST. See FRENCH SOMALI COAST. **SOMALILAND,** ITALIAN. See ITALIAN SOMALILAND.

SOMALILAND, so-mā'le-lānd, **PROTECTORATE.** A protectorate belonging to Great Britain on the Gulf of Aden, bounded by Italian Somaliland, Abyssinia, and the French Somali coast. Area about 68,000 square miles; population estimated at 344,000, nearly all Mohammedan and entirely nomadic except on the coast where permanent settlements have been made. The chief town is Berbera, with 30,000 inhabitants at the census of 1921. Other towns are Lulhar, with 7300, and Zeyla, with 7000. The main source of wealth in the interior is stock raising. The principal imports are dates, sugar, textiles, rice, and specie, and the principal exports are hides and skins, gums and resins, cattle and sheep, and glue. The only forms of transport are by camel and motor car. In 1925-26 the imports were £361,262; exports, £242,222; revenue £80,057; expenditure, £167,955. The government is under the British Colonial Office, which is represented by a local governor and commander-in-chief. Governor in 1927, H. B. Kittermaster, appointed Jan. 26, 1926.

SONG RECITALS. See MUSIC.

SORMA, AGNES. See MINOTTO, COUNTESS AGNES.

SOUTH, UNIVERSITY OF THE. A Protestant Episcopal institution of higher learning at Sevanee, Tenn., founded in 1857. The enrollment for the autumn term of 1927 was 322, of whom 306 were registered in the college and 19 in the theological school, three being registered in both departments. There were 35 students in the summer quarter, 25 of whom returned for the autumn session. The faculty had 27 members, exclusive of student assistants. The income from productive funds was \$60,000, while the receipts from all sources were \$320,000. The library contained 41,848 volumes. President, Benjamin Ficklin Finney, LL.D.

SOUTH AFRICA, UNION OF. A self-governing dominion of the British Empire, comprising the provinces of the Cape of Good Hope, the Transvaal, Natal, and the Orange Free State; constituted a legislative union by the South African Act of September, 1909.

AREA AND POPULATION. Total area, 472,347 square miles; divided as follows: Cape of Good Hope, 276,966; Natal, 35,284; Transvaal 110,450; Orange Free State, 49,647. Total population, according to the census of 1921, 6,928,580, distributed as follows: Cape of Good Hope, 2,782,719; Natal, 1,429,398; Transvaal, 2,087,636; Orange Free State, 628,827. The total European population of the Union of South Africa, according to the final audit of the 1926 census, is shown in the following table:

Province	Males	Females	Total	Per cent increase since 1921
Cape	357,583	348,554	706,137	8.55
Natal	81,370	77,746	158,916	16.18
Transvaal	313,733	294,849	608,622	11.99
Orange Free State	104,392	98,593	202,985	7.65
Total	856,918	819,742	1,676,660	10.84

The principal cities with their populations according to the census of 1921 were: Johannesburg, 288,131; Cape Town, the seat of the legislature, 207,404; Durban, 146,310; Pretoria, 74,952; Port Elizabeth, 46,094; East London, 84,

673. The capitals of the respective provinces are: Cape of Good Hope, Cape Town; Transvaal, Pretoria; Natal, Pietermaritzburg; Orange Free State, Bloemfontein. The movement of population in 1925 was: Births, 95,022; deaths, 56,552; marriages, 30,233. For a distribution of population by religion according to the census of 1921, see YEAR BOOK for 1924.

EDUCATION. In 1924, there were 4631 state and state-aided schools for European scholars, with 330,371 pupils, and 3250 schools for non-European scholars, with 262,763 pupils. The number of teachers in primary, intermediate, and secondary schools numbered 21,005. There were 286 private schools for white pupils, 372 for colored, with 20,490 white scholars, 16,892 colored, and 1867 teachers. The total number of students enrolled in the universities and colleges at the end of 1925 was 5570. The largest universities in point of number of students, with their average enrollment at the end of 1925, were: Cape Town, 1504; Witwatersrand, 1250; Stellenbosch, 869; and Transvaal University College, 769.

PRODUCTION, ETC. The leading agricultural products of the Union are wheat and maize. The total production of wheat in 1924-25 was 421,416,000 lbs. and the total production of maize 4,187,924,000 lbs. Other products included barley, 49,213,800 lbs.; oats, 239,006,250 lbs.; Kaffir corn, 312,214,000 lbs.; potatoes, 310,893,000 lbs., and tobacco, 12,762,476 lbs. The 1925 agricultural census showed the number of livestock in the Union as follows: 9,738,337 cattle; 814,894 horses; 120,010 mules; 729,856 donkeys; 162,732 ostriches; 35,569,712 sheep; 8,022,857 goats, and 800,883 pigs. The production of wool in 1925 was 156,969,334 lbs. and of mohair 8,051,114 lbs.

Gold retained its prominent position in the mineral industry of South Africa during 1926, establishing a new record for both quantity and value of production, 9,954,761 fine ounces worth £42,285,139. The increase in 1926 production was primarily a result of the expansion of the plants at some of the largest mines, notably the Government Areas, which was the largest producing gold mine in the world. Diamond production also reached a new record in 1926, when 3,217,966 metric carats were mined. The discoveries of platinum deposits apparently had reached a stage warranting the prediction that the Transvaal would become one of the world's leading producers. The quantity actually produced during 1926 amounted to only 4951 ounces, approximately, valued at £93,307, but this was entirely from experimental plants and was likely to be followed by a gradual increase as methods were perfected and new equipment was installed. The total value of all minerals produced in 1926 was £58,695,000.

The figures for the industrial census of the Union for the year ended June 30, 1926, showed a substantial recovery from the low point recorded for 1923-24. The gross value of the 1925-26 output was four times that for the calendar year 1911, and 75 per cent larger than that for the year 1915-16. The increase since 1923-24 was generally ascribed to the general recovery in business conditions and to the inauguration of a definite protective tariff policy in 1925. The figures relate to 48 of the industries of the Union and represent probably between 70 and 80 per cent of the total industrial activity

of the country. They show that the industrial production of the Union already exceeded in value that of the mineral production, for which the country was primarily known. The reported industrial production for the year 1925-26 amounted to £70,747,000; mineral production for the calendar year 1925 was valued at £54,478,000, and for 1926 at £58,695,000.

COMMERCE. The latest figures for a complete year's trade are those for 1925, when the imports were valued at £67,790,598 and the exports at £82,194,219. (Consult the preceding YEAR BOOK for the leading items in this trade.)

FINANCE. The proposed expenditures (exclusive of railways and harbors) to be defrayed from revenue funds of the Union of South Africa during the fiscal year beginning Apr. 1, 1927, were placed before the Assembly in the spring. The proposal called for a vote of £27,437,907, or an increase of £486,088 over the amount originally provided for in the year 1926-27; as compared with the revised figures of actual current expenditures, however (£27,372,000), the increase is only £65,920. Of the total disbursements proposed, £9,114,750 is for salaries, wages and allowances and £18,323,157 for general services.

COMMUNICATIONS. In oversea shipping in 1925 there entered 1497 vessels of 5,344,237 tons and cleared 1446 of 5,249,083 tons. Considering the drought conditions which prevailed for several months throughout South Africa, with a consequent heavy loss in agricultural produce traffic, the South Africa Railways' financial year which ended Mar. 31, 1927, was in many respects a remarkable one. The railways' budget disclosed earnings amounting to £24,093,347, a decline of only £58,060 from those of 1925-26. Gross working expenditures totaled £19,437,177, an increase of £701,852. The surplus available to meet interest on capital and other charges amounted to £4,656,170, as against £5,416,082 in the previous year. Passengers carried during the year numbered 80,084,249, an increase of 3,801,662 over 1925-26; revenue-earning coal traffic reached a new high level of 10,118,773 tons, and the number of livestock transported, 4,322,040 head, was the largest for any one year. The total mileage operated by the railroad administration at the close of the year was 12,897. Of this total, 12,206 miles were Government-owned and 691 were leased from private owners. The number of locomotives in stock was 2060, of which 1965 were steam-driven and 95 electrically driven. The cars in stock in service at the end of the year totaled 3445.

GOVERNMENT. The executive power is vested in the governor-general, appointed by the Crown, who acts through an executive council of ministers, each in charge of a department; and legislative power in a parliament, consisting of a senate of 40 members, of whom eight are appointed by the governor-general in council and 32 by the provinces (eight each); and a house of assembly of 135 members, distributed among the provinces as follows: Cape of Good Hope, 51; Transvaal, 50; Natal, 17, and Orange Free State, 17; the basis of suffrage being the same as that existing in each province at the time of the formation of the Union.

The governor-general, commander-in-chief, and High Commissioner for the Union in 1927 was the Earl of Athlone; and the executive council was constituted as follows: Prime Minister

and Minister of Native Affairs, J. B. M. Hertzog; Mines and Industries, F. W. Beyers; Railways and Harbors, C. W. Malan; Finance, N. C. Havenga; Justice, T. J. de V. Roos; Defense, Colonel Creswell; Labor, T. Boydell; Agriculture, J. C. G. Kemp; Lands, P. G. W. Grobler; Posts, Telegraphs, and Public Works, W. B. Madeley.

HISTORY. The outstanding event in the history of the Union in the course of the year was the settlement of the flag dispute which had torn asunder the internal politics of the country for several years. The settlement as finally agreed upon in October was the result of a compromise between General Hertzog and General Smuts. General Hertzog was the leader of the Nationalist group which wished to repudiate the Union Jack, and General Smuts was the spokesman of the South African Party, which includes most of the European element. After the compromise was reached, the bill was rapidly passed through the legislature. The flag as accepted consists of the government design of orange, white and blue horizontal stripes, but with the shield removed. In place of the shield there are the Union Jack and the Republican flags in the centre of the white stripe in the following order: The Union Jack horizontal nearest the pole, then the Orange Free State flag vertical, last the Transvaal vierkleur horizontal. These three flags together occupy about one-third of the white stripe.

The Union Jack will be a South African flag flying officially alongside the national flag to signify the Union's status internationally as a member of the British Commonwealth of Nations. There will be thus two South African flags, namely, the national or domestic flag, and the Empire flag. The Union Jack will be flown officially all the year round in the provincial capitals and in the chief coastal towns. The flying of the Union Jack in the smaller towns will rest with the government of the day.

SOUTH AMERICA. See under the various South American countries; and under NAVAL PROGRESS.

SOUTH AUSTRALIA. One of the states of the Australian Commonwealth, comprising the central and southern part of the island continent; bounded by the Northern Territory on the north, by Western Australia on the west, and on the east by Victoria, New South Wales and Queensland. Area, 380,070 square miles; population, according to the census of 1921, 495,336; estimated on June 30, 1927, 569,254, exclusive of aborigines, of whom the number is unknown. The number of full-blooded natives living in the settled portions has been estimated at only 1609. Capital and largest city, Adelaide, with a population (including suburbs), in 1925, of 303,614. In 1925 the movement of population was: Births, 11,457; deaths, 4979; marriages, 4255.

Education is secular, free, and compulsory. In 1925 there were 1029 schools with 84,284 pupils under instruction; private schools numbered 184, with 14,900 pupils. For higher education there is the University of Adelaide, and there are various institutions for the training of teachers and for technical instruction. In 1925-26 the principal crops, with their acreage and production, were as follows: Wheat, 2,465,648 acres, 28,603,101 bushels; barley, 239,337

acres, 4,134,824 bushels; oats, 158,062 acres, 1,798,443 bushels; hay, 517,220 acres, 612,671 tons; vines produced 13,074,874 gallons of wine. The chief mineral products are gold, copper, ironstone flux, and gypsum. The total value of the mineral production in 1925 was \$1,028,471. The imports for 1925-26 amounted to \$13,903,176 and the exports \$19,273,608. The chief exports are wool, wheat, copper and other minerals, meats, butter, wine, honey, fruits, hides and skins, tallow, leather, and manures. The revenue for 1927 was \$11,261,469, and the expenditure \$11,256,469. The revenue is largely derived from inland sources—railways and territorial receipts—and the chief items of expenditure are public service, railways, and the service on the public debt, which amounted to \$79,251,332 on June 30, 1926.

In 1924-25, 1280 vessels of 4,573,822 tons entered the ports of South Australia. In 1925 there were 3400 miles of railways in the state. A comprehensive programme of railway construction had been proposed in South Australia. See AUSTRALIA, *Railways*.

The administration is under a governor appointed by the Crown, with an executive council; legislative power is vested in a council and an assembly, the latter consisting of 46 members elected for three years. Governor in 1926, Maj.-Gen Sir George Tom Molesworth Bridges; prime minister, treasurer, and minister of railways, R. L. Butler (appointed Apr. 4, 1927).

SOUTH CAROLINA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,683,724. The estimated population on July 1, 1927, was 1,845,000. The capital is Columbia.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Cotton	1927	2,421,000	735,000*	\$72,080,000
	1926	2,648,000	1,008,000*	58,968,000
Corn	1927	1,497,000	25,449,000	22,804,000
	1926	1,426,000	22,103,000	19,893,000
Tobacco	1927	104,000	75,920,000*	15,564,000
	1926	85,000	58,780,000*	18,230,000
Oats	1927	449,000	10,827,000	7,745,000
	1926	416,000	10,488,000	7,024,000
Potatoes	1927	29,000	8,084,000	5,765,000
	1926	29,000	3,129,000	5,472,000
Sweet potatoes	1927	53,000	5,800,000	4,240,000
	1926	47,000	3,760,000	3,780,000
Hay	1927	446,000	358,000*	6,488,000
	1926	260,000	201,000*	4,010,000
Wheat, winter	1927	80,000	880,000	1,338,000
	1926	50,000	800,000	1,240,000

* bales, ^b pounds, ° tons.

MINERAL PRODUCTION. Clay industry products, stone, raw clay, sand and gravel formed the considerable items in the list of the mineral production of the State in 1925. Clay products in 1925 were valued at \$1,906,241; in 1924 at \$1,611,154. The output of stone was 833,100 short tons in 1925; in 1924, 824,030 short tons. The product was valued at \$1,315,613 for 1925; for 1924, at \$1,527,114. The total value of the mineral products of the State in 1925, duplications eliminated, was \$3,507,804; in 1924, \$3,444,366.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending Dec. 31,

1926, were \$12,752,387; their rate per capita was \$6.98. They included \$3,426,347 apportioned for education. Totals not included in the above, of \$373,253 in interest and of \$4,594,708 in permanent improvement outlays, brought the aggregate of State expenditure to \$17,720,348. Of this, \$5,992,009 was for highways, \$2,409,751 being for maintenance and \$3,582,857 for construction.

Revenue receipts were \$17,120,608; or per capita, \$9.38. Of their total, property and special taxes yielded 32.4 per cent, attaining a per capita rate of \$3.04. Earnings of departments and compensation paid the State for officials' services furnished 6.9 per cent of revenue; 48.3 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from sales taxes on gasoline, tobacco products and soft drinks.

Net State indebtedness on Dec. 31, 1926, was \$5,885,527, or \$3.22 per capita. Property subject to ad valorem taxation bore a valuation of \$424,863,722. State taxes levied thereon were \$2,888,899, or \$1.58 per capita.

TRANSPORTATION. The number of miles of railroad line in the State on Jan. 1, 1927, was 3,744.82. No additional trackage was built in 1927.

EDUCATION. Rapid progress in the movement of affiliation of lower schools with high schools was reported. Through this movement the elimination of grades in the lower schools, where more properly conducted in the high schools, and supervision of the lower schools by high school superintendents, were effected. There were enrolled in the public schools of the State, in 1927, 471,701 pupils. Of these, 435,919 were in the elementary schools and 35,782 in high schools. Expenditures for public education attained a total of \$16,874,760. Salaries of teachers averaged \$939.62.

CHARITIES AND CORRECTIONS. The State Board of Public Welfare, established in 1920, was the chief central administrative authority over institutions for the care and custody of individuals. The chief among these institutions were: South Carolina Industrial School for Girls (white), South Carolina Industrial School for Boys (white), State Reformatory for Negro Boys, State Training School (for the Feeble-minded), and a state hospital for mental disease having on Jan. 1, 1927, according to the U. S. Department of Commerce, 2558 patients.

LEGISLATION. The legislature convened in regular annual sessions in January. A campaign in the State for the renewed strict enforcement of the Sunday observance laws led to a demand for their modification. In response to this demand the legislature passed a statute liberalizing these laws, so as to permit Sunday activity in sports save such as were commercial or boisterous, and to permit the sale of newspapers, automobile tires, ice, medical and surgical supplies. Governor Richards vetoed this act.

POLITICAL AND OTHER EVENTS. Governor John G. Richards was inaugurated in January. Shortly after entering office he ordered sheriffs to proceed against all Sunday sports, and in March ordered strict enforcement of the State Sunday observance laws in all respects. There resulted numerous arrests of golf players on the courses at winter resort towns, and the Aiken resort colony procured a temporary injunction against molestation of Sunday playing. The Governor

directed the law officers to disregard this injunction. At a special election in Charleston, June 15, the voters defeated a proposal that the city adopt government by commission.

OFFICERS. Governor, John G. Richards; Lieutenant Governor, Thomas B. Butler; Secretary of State, W. P. Blackwell; Treasurer, J. H. Scarborough, Budget Secretary, Walter E. Duncan; Attorney General, John M. Daniel; Comptroller General, A. J. Beattie.

JUDICIARY. Supreme Court: Chief Justice, R. C. Watts; Associate Justices, Thomas P. Cothran, John G. Stabler, Eugene S. Blease, Jesse F. Carter.

SOUTH CAROLINA, UNIVERSITY OF. A non-sectarian State institution of higher education, located at Columbia, S. C.; chartered in 1801 and opened in 1805. The enrollment for the autumn session of 1927 totaled 1499, of whom 995 were men and 504 women. The registration for the summer session was 521. The faculty, including instructors, numbered 86. The productive funds of the institution were \$448,594.02 for the fiscal year. There were 82,000 volumes in the library. President, Davison McDowell Douglass, A.M., D.D. LL.D.

SOUTH DAKOTA. POPULATION. The fourth State census of South Dakota was taken as of May 1, 1925, and showed a total population of 681,260, of which 20,559 were Indians. Of this total 347,579 were males and 313,122 were females. The Fourteenth Census of the United States, returned for South Dakota 636,547 on Jan. 1, 1920. The estimated population on July 1, 1927, was 696,000. The capital is Pierre.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1927	4,655,000	134,995,000	\$76,947,000
	1926	4,630,000	83,340,000	48,337,000
Wheat, winter	1927	105,000	1,890,000	1,984,000
	1926	75,000	638,000	734,000
Wheat, spring	1927	2,987,000	44,803,000	46,981,000
	1926	1,842,000	10,973,000	12,945,000
Oats	1927	2,480,000	72,664,000	26,159,000
	1926	1,984,000	28,213,000	8,357,000
Hay	1927	4,115,000	2,580,000*	85,123,000
	1926	3,678,000	2,292,000*	27,431,000
Barley	1927	1,089,000	82,670,000	18,949,000
	1926	778,000	7,858,000	4,086,000
Flaxseed	1927	594,000	5,940,000	10,989,000
	1926	475,000	2,755,000	5,224,000
Potatoes	1927	66,000	7,690,000	4,174,000
	1926	55,000	3,300,000	5,247,000
Rye	1927	154,000	2,772,000	2,190,000
	1926	108,000	689,000	466,000

* tons.

MINERAL PRODUCTION. Gold, largely from the Homestake mine, the largest producing gold mine in the United States, furnished the bulk of the mineral production of the State. In 1927 the Homestake mine produced approximately \$6,677,000 in gold and 92,000 ounces of silver, according to the U. S. Bureau of Mines. In 1926 the Homestake and several small gold mines in South Dakota produced \$5,778,376 in gold and 82,186 ounces of silver. Stone, sand and gravel, and some coal were produced. The total value of the State's mineral production, duplications eliminated, was \$7,971,850 in 1925; in 1924, \$6,925,676.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the

State government in the fiscal year ending June 30, 1926, were \$9,264,250; their rate per capita was \$13.52. They included \$1,736,111 apportioned for education. Totals not included in the above, of \$745,402 expended in public enterprises (cement plant, coal mine and gasoline station), of \$3,415,637 in interest and of \$5,364,213 in permanent improvement outlays (including those in public service enterprises), brought the total of State expenditure to \$18,789,502. Of this, \$5,274,408 was for highways, \$1,042,149 being for maintenance and \$4,232,319 for construction.

Revenue receipts were \$17,474,383, or per capita, \$25.51. Of their total, property and special taxes yielded 27.5 per cent, attaining a per capita rate of \$7.01. Earnings of departments and compensation paid the State for officials' services furnished 7.2 per cent of revenue; 24.6 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a gasoline sales tax.

Net State indebtedness on June 30, 1926, was \$16,743,882, or \$24.44 per capita. Property subject to ad valorem taxation bore a valuation of \$1,876,078,532. State taxes levied were \$4,990,638, or \$7.29 per capita.

TRANSPORTATION. The number of miles of railroad line in the State Jan. 1, 1927, was 4,244.56. Trackage built in 1927 totaled 15.87 miles of first track.

EDUCATION. According to the Superintendent of Public Instruction, in the *Journal* of the National Education Association, public education was handicapped by the legislature's discontinuing State aid to rural and consolidated schools.

CHARITIES AND CORRECTIONS. A Board of Charities and Corrections exerted central authority over charitable and correctional institutions of the State. These included the State Penitentiary, South Dakota School for the Deaf, School for the Blind and Training School, State School for the Feeble Minded, State Hospital, and Soldiers' Home. The state prison, according to statistics of the U. S. Department of Commerce, had 494 inmates in Jan. 1, 1927, and 1317 persons were undergoing treatment in the State hospital for mental diseases.

LEGISLATURE. The legislature met in regular biennial session in January. It passed and sent to the Governor, who vetoed it, a bill to establish capital punishment in the State. From 3 cents the State tax on motor gasoline sales was increased to 4 cents, from July 1, the act further providing that the added cent of taxation should be paid into the general fund of the State. Facing a prospective deficit of from \$500,000 to \$1,000,000 a year in the accounts of the State government, due to the insufficiency of the 1.5 mill general levy and the prospect of reduced valuations of farm lands, the legislature considered an income tax enactment, but a bill to this purpose was defeated in the lower house by a heavy majority. A general appropriation act containing 630 items of appropriation was passed. This was vetoed in its entirety by Governor Bulow, who insisted on a lower scale of appropriation. In consequence of his action it became necessary to hold a special session of the legislature, convening June 22, to enact a general appropriation bill along compromise lines approved by the Governor. The special session gave the name of President Coolidge, then on

his summer sojourn at Rapid City, S. D., to one of the summits of the Black Hills.

POLITICAL AND OTHER EVENTS. The State game lodge in the Black Hills, near Rapid City, was tendered to President Coolidge, for his residence for the Summer. He accepted, and removed thither in the middle of June, remaining, save for occasional trips, until September 9. The Sioux Indian tribe adopted him as a member. The State called in April its issue of \$4,000,000 4½ per cent rural credit bonds, refunding them with an issue at 4½ per cent. The Sioux Indians of the State pressed a claim of \$1,000,000,000 against the United States for lands in the Black Hills, to which they asserted title. The sugar industry made a start in the State with the establishment at Belle Fourche of a beet sugar factory said to represent an investment of \$1,000,000. It was anticipated that the surrounding farm country, which had been tested for beet growth, would develop a large sugar-beet output.

OFFICERS, Governor, W. J. Bulow; Lieutenant Governor, H. E. Covey; Secretary of State, Gladys Pyle; Treasurer, A. J. Moodie; Auditor, E. A. Jones; Attorney General, Buell F. Jones.

JUDICIARY. Supreme Court, Presiding Judge, Dwight Campbell; Samuel C. Polley, James Brown, Carl G. Sherwood, N. D. Burch.

SOUTH DAKOTA, UNIVERSITY OF, A State institution of higher education at Vermillion, founded in 1882. The enrollment for the first semester of 1927 was 1191, and 224 were registered for the summer session of 1927. The faculty and staff numbered 135. The productive funds amounted to \$412,950, and the income for the year was \$75,306.02. The library contained 62,000 volumes. President, Robert L. Slagle, Ph.D., LL.D.

SOUTH DAKOTA STATE COLLEGE. A State college of agriculture and the mechanic arts, at Brookings, founded in 1882. The enrollment for the summer session and the autumn of 1927 was 1311, distributed as follows: Agriculture, 102; engineering, 183; home economics, 128; pharmacy, 70; general science, 380; special students in music, art, commerce, etc., 26; secondary school of agriculture, 235; graduate students, 22; summer school, 165. The faculty, including experiment station and extension staffs in agriculture and home economics, numbered 158. The productive funds of the college for the year amounted to \$738,508.08, with 133,000 acres of land; the income for 1926-27 for college maintenance and extension of physical plant was \$805,362, for agricultural experiment station, \$129,176, and for agricultural and home economics extension service, \$274,126. The library contained 35,000 bound volumes and 12,000 pamphlets. The new Lincoln Memorial Library, constructed at a cost of \$2,000,000, was completed during the year and dedicated September 10, by President Coolidge. President, Charles W. Pugsley, B.S., D.Agr.

SOUTHERN CALIFORNIA, UNIVERSITY OF. A coeducational institution of higher education at Los Angeles, Cal.; founded in 1879. It comprises the following schools and colleges: Liberal arts, music, dentistry, pharmacy, graduate, religion, law, speech, commerce and business administration, education, social welfare, architecture, and university college. The enrollment for 1926-27, including summer session and extension classes, was 14,057. For the summer

session of 1927 the enrollment was 4369. In the autumn of 1927 there were 500 members on the faculty. The endowment was \$1,000,000, the income from tuition fees \$1,278,488.09, and other income \$117,377.66. There were 105,000 volumes in the library. A Student Union building was erected on the campus during 1926-27. President, Rufus B. von Kleinsmid, Sc.D., J.D.

SOUTHWEST AFRICA. A former German protectorate, administered since Dec. 17, 1920, by the Union of South Africa under a mandate from the League of Nations; bounded on the north by Portuguese West Africa, on the west by the Atlantic Ocean, and on the south and southeast by the Cape of Good Hope Province of the Union, and on the remainder of the eastern boundary by the Bechuanaland Protectorate. Capital, Windhoek, with a population of 4190 Europeans and 13,160 natives; area, 311,820 square miles; population, according to the census of 1926, 24,511 Europeans and about 208,300 natives. The non-German element in the European population is almost entirely South African. The chief native tribes are Hottentots, Bushmen, Hereros, Ovambos, and Bergdamarus.

In 1926 there were 46 government schools with 3003 pupils, and 22 registered private schools with 826 pupils, for the education of the white children; for the natives there were in the same year 48 government-aided mission schools with 3945 pupils, and 12 mission schools not yet aided. Stock raising is the principal pursuit; agriculture has been found impractical on a large scale because of the scarcity of water. The principal mineral product is diamonds; others are copper, vanadium, marble, tin, gold and silver. Under the influence of expanding mineral and agricultural development, the foreign trade of Southwest Africa has shown a consistently upward tendency. The returns for 1926 disclosed imports valued at £2,507,625 and exports amounting to £3,292,986. The estimates for 1926-27 were: Revenue, £706,000; expenditure, £987,077. There are about 1333 miles of government-owned railway and 98 miles of privately owned lines. The head of the government is an administrator representing the governor-general of the Union of South Africa; he has full power to legislate and is assisted by an advisory council. Administrator in 1927, A. J. Werth, appointed in November, 1925. See **SOUTH AFRICA, UNION OF.**

SOVIET SOCIALIST REPUBLICS OF RUSSIA. See **RUSSIA.**

SPAIN. A constitutional monarchy of southwestern Europe, occupying the greater part of the Iberian peninsula and separated from France by the Pyrenees. Capital, Madrid.

AREA AND POPULATION. Continental Spain has an area of 190,050 square miles; including the Balearic and Canary Islands and Spanish possessions on the north and west coasts of Africa, the total area is 194,800 square miles. According to the census of 1920, the population was 21,959,086, as compared with 19,950,817 in 1910. The cities with over 150,000 inhabitants on Dec. 31, 1925, were as follows: Madrid, 791,611; Barcelona, 745,711; Valencia, 262,647; Seville, 212,326; and Malaga, 157,250. The movement of population in 1925 was: Births, 644,693; deaths, 432,164; marriages, 158,849.

Although the population of Spain, which was 20,392,000 in 1913, increased to 22,128,000 in 1926, the birth rate per thousand in 1926 was

only 29.9, compared with 30.03 in 1913. The principal reason to which the decrease was attributed was the diminishing number of marriages, although there was also a noticeable decrease in the size of families throughout Spain. During 1900, when the population was 18,566,000, there were 161,201 marriages; whereas in 1926, with the population given above, there were 162,035 marriages, a proportionate falling off of .1 per cent.

EDUCATION. On Jan. 1, 1925, there were 29,308 public schools and about 5500 private schools, the total number of pupils being 3,098,840. Secondary education is conducted in "institutions" or middle-class schools, and there must be at least one of them in every province. In 1925 there were 60 "institutions" with 63,084 pupils. There are eleven universities, situated at Barcelona, Madrid, Granada, Murcia, Oviedo, San Diego, Salamanca, Seville, Valencia, Valladolid and Zaragoza. At Cadiz there is a medical faculty affiliated with the University of Seville, which also maintains an educational institution in the Canary Islands.

PRODUCTION. The following table from the *Statesman's Year Book* for 1927 shows the area under the principal crops and the yield for 1926:

	Area Acres	Yield Cuts.
Wheat	10,770,818	79,795,490
Barley	4,470,917	41,927,860
Oats	1,861,851	10,940,912
Rye	1,864,711	11,940,876
Maize	1,005,184	8,781,004
Millet	4,814	41,468
Meslin	112,375	622,282
Rice	122,426	6,395,622
Beans	556,777	3,624,536
Kidney beans	684,261	2,509,012
Peas	148,403	728,934
Chick peas	628,526	2,688,290
Lentils	88,062	537,102
Favae	499,419	3,019,878
Vetches	174,604	1,224,008

Spain is rich in minerals. The leading minerals in order of value in 1925 were as follows: Coal, lead, copper, iron and zinc. The total production of all grades of coal in 1926 was 6,641,631 metric tons.

COMMERCE. The Spanish foreign trade balance during 1926 improved considerably, imports valued at 2,153,523,000 pesetas being 96,000,000 pesetas less than during 1925 and exports amounting to 1,605,588,000 pesetas being 21,852,000 pesetas more than in that year. The decline in imports was partly attributable to the restrictions initiated by the royal decree of July 9, 1926, which limited the importation of manufactured articles with a view to protecting Spanish national industry. The unfavorable trade balances for 1925 and 1926, converted at the average exchange rates for those years, were \$95,334,000 and \$81,642,000, respectively.

FINANCE. The Spanish ordinary budget for 1927 showed a greatly reduced deficit from the levels of the four fiscal years up to July, 1926. The deficit reduction, however, was due not so much to important economies as to the fact that items of expenditure previously included in the ordinary budget statement were charged against the extraordinary budget. The 1927 ordinary budget provided for income at 3,073,379,000 pesetas and expenditures at 3,139,441,000 pesetas, leaving an estimated deficit of 66,062,000 pesetas.

The new budget was revised to include 15 categories instead of 13, as formerly, hence comparison in some of the individual items was not possible.

The total public debt in January, 1927, was 17,725,000,000 pesetas.

COMMUNICATIONS. On Jan. 1, 1926, the merchant navy contained 1211 steamers of 1,164,868 tons net, and 548 sailing vessels of 89,784 tons net. The total length of railways in Spain is approximately 10,000 miles, of which 7250 miles are of standard gauge.

GOVERNMENT. According to the constitution, executive power is vested in the King, who acts through a responsible ministry, and legislative power in the Cortes, or parliament, consisting of a senate and a chamber of deputies. Parliament was dissolved by royal decree, Sept. 16, 1923. The King in 1927 was Alfonso XIII, who succeeded on his birth (which occurred after the death of his father), May 17, 1886. Under the constitution the principle of ministerial responsibility is established, but in 1923 a military directorate was set up under Lieut. Gen. Primo de Rivera. On Dec. 3, 1925, the military directorate was superseded by a civil government, under the presidency of Rivera, and composed of members of a new political party, the "Unión Patriótica." All the former ministry departments were reestablished, but the change was one in name only, as everything continued as before when Rivera was dictator. The civil government in 1927 was constituted as follows: President of the Council and Minister of Foreign Affairs, Primo de Rivera; Justice and Worship, G. Ponte; War, General Duke of Tetuan; Marine, Vice Admiral Cornejo; Finance, C. Sotelo; Interior, General Anido; Public Instruction, M. Callejo; Public Works, M. Benjumea; Labor, M. Aunos.

HISTORY. There was no evidence to denote any weakening of the position of Primo de Rivera throughout the course of the year. He held everything in a firm grip and took over the ministry of foreign affairs into his own hands early in the year, evidently to forestall any slips in that direction. Although small outbreaks occurred in Morocco they were not sufficient to cause alarm. It should be noted, however, that whereas France took every measure to pacify the natives in Africa after the passing of Abd-el Krim, Rivera still pursued his old policy of repression, which would obviously necessitate the control of North Africa by force of arms.

The leading event in Spain itself during the first half of the year was the reorganization of the army on a smaller scale and the substitution of the merit system for the rule of seniority. Throughout the year there was considerable discussion concerning a National Assembly which the dictator had promised from time to time to call to revise the old constitution. It was first promised for the twenty-fifth anniversary of Alfonso's reign and then was put off until September, the anniversary of Primo de Rivera's coup.

After considerable delay, the assembly was summoned on October 10 by a royal decree. The new assembly was to have no legislative or administrative functions but was to be in the nature of an advisory body to consider propositions put before it by the government or proposed by its own members. The government re-

taining the right to final action. The signing of the decree by the King threw him definitely on the side of Rivera and against the old-line politicians who were hoping for a return of "the good old days" before 1923. The four hundred members were selected by the government directly or indirectly.

The chief task of the assembly was to be the framing of a constitution, which, according to the wishes of Rivera, was to be a mere skeleton to be filled in by laws. The legislature was to be unicameral and was to consist of permanent and non-permanent members, whose selection depended upon the government. The usual provisions which an Anglo-Saxon considers essential, such as freedom of speech, press, religion and assembly, were conspicuous by their absence.

SPANISH-AMERICAN LITERATURES.

Literary works by Spanish-American authors do not reach the United States as promptly or as regularly as one could wish, and as they are published not only in the eighteen Spanish-speaking countries of the western hemisphere, but also in France and Spain, the task of the chronicler is very much complicated. The facts printed here must in no sense be considered as exhaustive; nor must the omission of some countries be taken as evidence that they produced nothing during the year 1927. It means simply that the chronicler received nothing therefrom, although efforts were made to obtain information from every Spanish-American capital.

Poetry is very much alive in Spanish America, and, before we examine the material of all genres that has reached us from the several countries, we call attention to an anthology of recent verse, chosen from the entire continent, *Índice de la nueva poesía americana*. There are three prologues, by Alberto Hidalgo, Vicente Huidobro, and Jorge Luis Borges, respectively. Ten nations (Argentina, Chile, Colombia, Ecuador, Guatemala, Mexico, Nicaragua, Peru, Uruguay, and Venezuela) and 62 poets are represented. Argentina and Chile having 16 each and Peru 14. Mexico is next best, with six. This is a serviceable guide to the new movement, but it is arranged alphabetically under the authors' names, and not grouped by countries. Practically no information is given about any of the poets. The book completes somewhat, and enlarges, the Argentine anthology recently published by Julio Noé, but it is not nearly so valuable as Alfred Coester's *Anthology of the Modernist Movement in Spanish America*, published in 1924, with introduction, biographies and notes.

ARGENTINA. Three national prizes for literature were awarded as follows: First prize (30,000 pesos) to Gustavo Martínez (whose pen name is Hugo Wast) for his novel, *Desierto de Piedra*; second prize (20,000 pesos) to Roberto J. Payró for his novel *El Capitán Vergara*; and third prize (10,000 pesos) to Rómulo D. Carleña, for his *Historia de la Historiografía argentina*. Payró has been successful in various genres. *El falso inca* (chronicle of the Conquest); *El casamiento de Laucho* and *Antigona* (novel); *Ensayos poéticos* and *Scripta* (stories); *Sobre las ruinas* and *El triunfo de los otros* (dramas); and a highly important two-volume work on government, *La Australia Argentina*. Hugo Wast is a very prolific novelist, and his novels have long

led the lists of best sellers, despite the fact that the author has never consented to write a line that he could not show to his children.

The faculty of philosophy and letters of the University of Buenos Aires, Institute of Argentine Literature, section of documents, published two interesting dramas—Bartolomé Mitre, *Cuatro épocas* (drama in five acts in prose and verse), and Miguel Ortega, *Lucha de Miranda*.

The following deserve notice even in so brief an article: E. de Ory, *Los mejores poetas de la Argentina*; Soler Daras, *Terremotos víricos y otros temblores*; C. Delgado Fito, *Versos del emigrante*; González Carbalho, *Palabras de retorno* (poetry); E. Bustamante, *Antipoemas*; R. Lascano, *La lámpara del hogar* (poems); P. Herreros, *Poesía pura*; and Fernández Moreno, *El Hijo*. Carlos María Ocantos (former Argentine diplomat, living in retirement near Madrid) published *Tulía*, volume 18 of his *Novelas argentinas*. Ricardo Rojas (author of the *Historia de la literatura argentina*, to which was awarded in 1921 the Grand National Prize for Letters, instituted by the Argentine government) published in 1927 *El Cristo invisible*, whose title is inviting.

Although published in 1924, three interesting volumes are now available: H. H. Dobranich, *Obras*, in the definitive edition (1, *Monólogos*, etc.; 2, *Entre libros y papeles*, and 3, *Celajes de Aurora*). Argentina laments the loss of her distinguished son Guiraldes, well known for his *El cencerro de cristal*, *Xamaca*, and especially *Don Segundo Sombra* (considered a formidable monument expressing the serious soul of the pampas).

CHILE. The learned lexicographer and grammarian, Miguel Luis Amunátegui Reyes, published the third volume of his invaluable *Observaciones i enmiendas a un Diccionario, aplicables también a otros*, the first two volumes having appeared in 1924 and 1925. As this veteran scholar had been before the public for more than thirty years, it is of worth to mention some of his outstanding earlier works: *Borrones gramaticales*, *Al través del diccionario i la gramática*, *Críticas*, *i Charlas*, *Mis Pasatiempos*. *La reforma ortográfica*, *En la puerta de la iglesia* and *Artografía razonada*. Another important lexicographical work was by the venerable bibliographer, J. T. Medina. *Nuevos chilenismos registrados en el Diccionario Manual Ilustrado de la Real Academia de la Lengua*. His torical studies also appeared: F. A. Machuca, *Las cuatro campañas de la Guerra del Pacífico*, vol. I; A. Benavides Santos, *Historia compendiada de la Guerra del Pacífico*, 1879-84, and *Seis años de vacaciones, narraciones históricas y anecdóticas de la Guerra del Pacífico*; and Virgilio Figueroa, *Diccionario histórico y biográfico de Chile, 1800-1925*. Pedro Itriago-Chacín treats international affairs in his *En la cátedra*, a mature book, evolved from lectures in Chile's three-year course of diplomacy (established in 1916 for all who would represent Chile abroad) and setting forth sound principles of international law, the history thereof, and its culmination in the Covenant of the League of Nations. M. A. Vittini, *La Paz y la Guerra (estudio de exposición y de crítica)* is a keen study aiming at the outlawing of war, and preceded by tributes to two of Hispanic-America's foremost anti-war leaders, the Argen-

tine Juan Bautista Alberdi and the Brazilian Ruy Barbosa. Other belletristic material must have been produced, but notable items received were *Cantos filiales* by the veteran poet, Samuel Lillo; *El habitante y su esperanza*, by P. Neruda; *Al margen de la poesía*, by F. Donoso G., who thus gathered together a series of critical lectures delivered in 1926 before a Catholic institute in Santiago de Chile; *Dolidamente* (poems) by that exquisite dreamer, Aida Moreno Lagos; and *El triunfo del Dolor*, a volume of beautiful poems by Amado del Valle Riente, already highly esteemed for his *Ramillete infantil*, and especially for his *Crisálidas del corazón*.

COLOMBIA. This land, whose capital, Bogotá, has with reason been called the Athens of South America, had a brilliant literary output both in belles lettres and in scholarship. The following have come to our attention: E. Restrepo, *El tonel de Diógenes*; T. Carrasquilla, *El zarco and Ligia Cruz*; R. Botero, *En las tierras del oro*; Armando Solano, *Glosario sencillo*; Manuel de Jesús Andrade, *Diccionario ortológico, analógico, sintáctico, y ortográfico, o catálogo de voces castellanas cuyo uso puede ofrecer dificultad*; and the young brothers, G. and A. Hernández de Alba, *Estudios históricos*, with prologue by Antonio Gómez Restrepo, presenting them as especially well equipped in the art of heraldry.

COSTA RICA. Max Jiménez, a young writer of extreme sensibility, published some interesting *Ensayos*, and Rogelio Sotela put out *Crónicas del Centenario de Ayacucho*.

CUBA. The well known grammarian, J. A. Rodríguez García, published a well documented study of the life and works of the distinguished litterateur and statesman, Manuel Sanguily. Rodríguez García's discourse when he took possession of his chair in the Cuban Academy of History dealt with *La vida y las obras del General Enrique Collazo*. The distinguished jurist-consult D. V. Tejera (hijo) has written upon a wide range of social problems; he published within the year *El matonismo como figura delictuosa, protección de la niñez contra los trabajos inadecuados; Las circunstancias agravantes y las ideas modernas; Orientaciones para la educación de los niños*, and *El hondo problema de la pena de muerte*. Medardo Vitier, a keen thinker in educational matters, published *Lo fundamental; ideas sobre educación*. His earlier works, *La ruta del sembrador, motivos de literatura y filosofía*, and *Enrique José Varona*, were highly praised by such scholars as A. Bonilla y San Martín and R. Menéndez Pidal.

Antonio Iraizoz's *La emoción que nos falta* is an earnest plea for putting more of the fine arts into the education plan of the country, and especially of primary and secondary education. It had been preceded by such important literary works as *Puya, Ideología de José Martí, Lecturas Cubanas*, and *Enrique Piñeyro, su vida y sus obras*. Other things that should be noted are: F. Lles y Berdayes, *El individualismo, ensayo sobre el instinto y la conciencia* (which had been preceded by *La sombra de Heráclito and La escuela de Diógenes*); Renée Méndez-Capote de Solís, *Oratoria cubana* (a delightful book); J. de la Cruz León, *Amiel o la incapacidad de amor* (interesting and beautiful); Néstor Carbonell, *Prosas oratorias*; Irene A. Wright, *Historia documentada de San Cris-*

tóbal de la Habana en el siglo XVI, 2 vols.; and Graziella Barinaga and Ponce de León, *Estudio crítico biográfico de Emilio Bobadilla (Fray Cándil)*.

ECUADOR. The following works came to our attention: José Ariel, *CanCIÓN de Rosas*; Pablo Palacio, *Un hombre muerto a puntapiés (Cuentos)*; Telmo N. Vala, *Labios románticos*; Ricardo Álvarez, *Espigas de la Noche*; and Alfredo Flores y Caamaño, *El verdadero testamento del Gran Mariscal de Ayacucho, y una de las últimas cartas que dirigió a su esposa* (a successful effort to rehabilitate the moral integrity of the Grand Marshal of Ayacucho and the memory of his widow).

MEXICO. From Mexico the following may be mentioned: F. Monterde, *Algunos novelistas mexicanos*; María del Mar, *El alma desnuda*; J. Ramírez Cabañas, *Espartimiento* (Poesías); J. Ramos Páramo, *El tema trágico*; J. Torres Bodet, *Margarita de niebla*; F. J. Santamaría, *Glosa lexicográfica*; and F. Gómez de Orozco, *Catálogo de la colección de manuscritos de J. García Icazbalceta relativos a la Historia de América* (very important).

PERU. The children of the great "tradicionalista," Ricardo Palma, are following worthily in the footsteps of their father. Clemente Palma is well known as a man of letters, and recently he published *Historietas malignas*, as a continuation of his *Cuentos malevolos*; and his daughter, Angélica Palma, has just published in book form *Tiempos de la Patria Vieja* (an historical novel that won the first prize in the competition for historical novels, on the occasion of the centenary of Ayacucho); two of her earlier novels were *Venida* and *Por senda propia*. Alberto Ureta, already well known for several works of criticism and of verse, especially *Rumor de almas* and *El dolor pensativo*, which were later published in one volume entitled *Poemas*, recently gave us *La desolación romántica y Alfredo de Vigny*. Enrique López Albujar's new book, *Cuentos andinos*, was as favorably received as was his earlier work, *De mi casona*. The outstanding literary event of the year is probably the appearance of the monumental novel *El Pueblo del Sol*, by Augusto Aguirre Morales, who spent ten years of arduous study to prepare himself to write a novel which should be a worthy prose epic, so to speak, of the Incas.

URUGUAY. From Uruguay the following items have come to our attention: F. Gohaira, *Es-pigas de bronce*; J. M. Delgado, *Metal*; J. P. Bellán, *El pecado de Alejandra Leonard* (stories); J. Navarro Monzó, *De Amós a Jeremías*; and Luisa Luisi (a great force in Uruguayan education), *Poemas de la inmovilidad y canciones al Sol* (which is the best work, thus far, of this versatile and gifted poetess). Uruguay laments the loss this year of two of her most brilliant sons, Javier de Viana, novelist and story-teller, whose best works were *Gaucho* and *Guri*, and Carlos Roxlo, professor, journalist, statesman, lyric poet, and literary historian, whose master works were *Glorias de América*, *Los poetas del Renacimiento*, and the seven-volume *Historia crítica de la literatura uruguayana*.

VENEZUELA. Venezuela continued her scholarly traditions and several learned works are at hand: C. Parrs-Pérez, *Delphine de Oustine, belle amie de Miranda*; Vicente Dávila, *En-*

comiendas (a splendid continuation to his genealogical investigations and to his *Diccionario Biográfico*); Santiago Montoto, *Colección de documentos inéditos para la historia de Ibero-América*; Fray Froilán de Rionegro, *Actuaciones y Documentos del Gobierno Central de la Unidad de la Raza en el Descubrimiento, Exploración, Población, Pacificación y Civilización de las antiguas Provincias españolas, hoy República de Venezuela* (1486-1600); Blas José Terrero, *Teatro de Venezuela y Caracas*; the author, who lived 1735-1802, was still working on the manuscript when he died; and under governmental instruction the manuscript was placed in the hands of that expert bibliographer and librarian, Manuel Segundo Sánchez; Vicente Lecuna, *Documentos referentes a la creación de Bolivia*, 2 vols.; and Aristides Rojas, *Estudios históricos: Segunda Serie*.

Two literary works have come to our attention, R. Blanco Fombona, *La mitra en la mano* (very highly praised); and A. M. Queremel, a poet of marked personality, *Trayectoria* (a poem). Venezuela lost two of her leading representatives, F. Jiménez Ariza, poet and essayist, member of the Academia Nacional de la Historia de Venezuela, and librarian of the Library of Congress in Caracas, and Manuel Díaz Rodríguez, a writer whose dominant note, stylistically, was color, and who inspired a whole generation of youth with his novels, chief of which were *Sangre Patricia*, *Peregrina o el Pozo encantado*, and above all *Idolos Rotos*. See also *PAROLOGY*, *MODERN*.

SPANISH LITERATURE. Again in 1927, the output in the drama seemed to have kept ahead of those of the other branches, while erudition had almost overtaken fiction. In both drama and fiction, however, there seems to be a transition movement from what we have been accustomed to, although the outlines of what it will lead to are not yet clearly discernible. There is a confusion of new names whose real significance cannot be foreseen; dramas in verse are more frequent than for many years past.

DRAMA. Benavente, by his *La noche iluminada*, a fantasy for children and adults, recalls Shakespeare's *Midsummer Night's Dream*; and the public was delighted with his *El hijo de Polichinela*. The Álvarez Quintero brothers continue unabated their clean, delightful work. We note especially *La cuestión es pasar el rato* (a three-act comedy, called by the critics an "extraordinary work" and the authors' "most forceful" play). P. Muñoz Seca continues with plays filled with riotous verbal quips, as witness *Las inyecciones* (jocular treatment of the glandular theory in modern therapeutics), in collaboration with Jacinto Guerrero. Eduardo Marquina outdid himself with *Fruto bendito* (delicate treatment of the sanctity of motherhood), and *La ermita, la fuente y el río* (one of the greatest successes of the season, with the sheer winged beauty of its mellifluous metrical structure). L. Fernández Ardavin had three successes, *La hija de la Dolores*, *La cantaora del puerto*, and *Flores y Blancaflor* (beautiful but too exuberant verse treatment of a mediæval legend). M. Linares Rivas was very successful with *Mal año de labos!* Azorín blazed a new trail with his *Brandy, mucho brandy*, while with his beautiful trilogy, *Lo invisible*, he tried still further to develop those super-realistic tendencies that he is importing into Spanish theat-

rical customs. His *Comedia del arte* is an improvement over his beautiful *Old Spain*, mentioned in the 1926 YEAR BOOK. The Machado brothers, Antonio and Manuel, won a clamorous success with *Juan de Mañara*, a new play concerning the legendary Sevillian personage Don Juan.

The following may also be noted: A. Aponte, *Superstición* (notable Celtic trilogy); L. Grajales and F. García Pacheco, *Los diez mandamientos: Retablo escénico* (exaltation of the decalogue, with a scenic fable for each commandment); A. Mori and G. Perrin, *Mujeres* (handled with profound psychology and rare delicacy); J. I. Luca de Tena, *Maria del Mar*; F. García Lorca, *Mariana Pineda* (exquisite verse drama of the days of Fernando VII); and four new dramatists, all with works of much promise: J. L. Mayral, first appearance as poet, with a comedy in verse, *La jaca torda*; M. Abril, *El Doctor Prometeo*; E. Alvear, *Fuensanta, la del cortijo*; and L. Navarro, *Yo soy un amigo mío*.

FICTION. This year the following well known authors have done notable things: R. del Valle Inclán, *Tirano Banderas* (brilliant picture of tyranny in a tropical Spanish-American republic); R. Pérez de Ayala, *Tigre Juan* (won half the National Prize for Literature); J. Francés, *Rostros en la niebla*; P. Mata, *Más allá del amor y de la muerte* (a new success, and companion piece to his *Más allá del amor y de la vida*); J. Arderius, *La espuela* (original and interesting); A. Martínez Olmedilla, *Una mujer de su casa* (very popular); G. Miró, *El Obispo leproso* (in exquisite literary form and containing firm characterization); and Concha Espina, *Las niñas desaparecidas*. Less well known writers who attracted favorable attention are J. Bernacer, *La novela inmovilable*; B. Soler, *Marcos Villari*; G. Corrochano i Mektub!; Carmen R. Raggio (a young girl), *Tiernos brotes* (charming stories); A. Cases, *Las Hogueras de Israel, la novela de los Hebreos* (successful); E. Mendaro, *La herencia de Mimi* (highly praised); C. Suárez, *Una sombra de mujer* (interesting); F. Arias Abad, *Ráfagas* (beautiful, moral tales for children); B. Alonso, *El dolor de ser bonita*; J. Bruno, *Chipilín*; J. Ortiz de Pinedo, *... y la Vida se va!*; María M. de Guitián, *Fatalidad*; J. Díaz Caneja, *Verde y azul*; A. de Sandoval, *Los amores de un cadete*; Consuelo Valcarcel Satteau, *El triunfo de la pasión* (a notable novel with prologue by the Academician Gutiérrez Gamero, himself a novelist); A. Menoyo Portales, *El tesoro de los Monjes*; M. Azaña, *El jardín de los frailes* (a psychological story about the Escorial); E. Giménez Caballero, *Los toros, las castañuelas y la Virgen* (an excellent book by a young writer of great promise), and F. de Cossio, *La Rueda* (in elegant Castilian prose; if the author maintains this style and writes with greater and more human fervor, he may become Spain's leading novelist). Of Juan Valera's *Obras Selectas*, vols. 10 and 11 have appeared, *Dafnis y Cloe* and *Cuentos*.

POETRY. Although not so numerous, the poetic productions were interesting. P. Jara Carrillo won the prize in the national contest for hymns to the coronation of the Virgen de la Fuensanta. The following should also be noted: J. Ugarte, *Glosario lírico de Job*; Damaso Martínez Vélez, *Los caminos del amor* (a mystic

poem); Elizabeth Mulder de Davner, *Embruajamiento*; A. Lázaro, *Confesión*; Trinidad Padilla de Sanz, *De mi collar*; Alberto Lista, *Poemas inéditas* (with a preliminary study by J. M. de Cossio); F. García, Lorca, *Canciones* (exquisite, and promise much, when this versatile poet gets down to work); and E. Prados, *Vuelta* (fine, but the author had not yet found his proper verse medium).

The outstanding poetic event of the year was probably E. Marquina's writing of the poem for the national hymn to be sung to the music of the Marcha Real. Marquina wrote twelve stanzas, each concerning some different phase of Spain's long history. Alfonso XIII had chosen three in particular, although declaring that he liked the entire dozen, and saying that Marquina had marvelously interpreted his thought, that the strophes should be "a cry of affirmation and of faith, unclouded by any political coloring, and devoid of that aggressive form of patriotism which, by stressing characteristics of exclusiveness and antagonism against other peoples, would deprive the hymn of the gentle prerogative of being sung and played under skies not Spanish."

ERUDITION. The most interesting things in the scholarly output of Spain were the following: E. Guzmán, *El Quijote y los libros de caballería*; L. Araujo Costa, *Letras, damas y pinturas*; A. Montoro, *Las mujeres en la historia*; C. Barja, *En torno al lirismo gallego del siglo XIX*; J. B. Trend, *The Music of Spanish History to 1600*; F. J. Santamaría, *Glosa lexicográfica*; Conde de Güell, *Apuntes de Recuerdos, El Poeta Verdadero*; M. Artigas, *Menéndez y Pelayo* (an important contribution); J. Puyol y Alonso, *Orígenes del Remo de León y de sus Instituciones políticas* and *Adolfo Bonilla y San Martín (1875-1926)*, *su Vida y sus Obras*; F. Rodríguez Marín, *La Fúrida de Gálvez de Montalvo*; J. Subirá, *La música de la Casa de Alba, Estudio histórico y biográfico*; Marqués de Villa Urrutia, *Mujeres de antaño, La reina María Luisa, esposa de Carlos IV*; A. S. Corbière, *Juan Eugenio Hartzenbusch and the French Theatre*; *Clasicos Castellanos*, vols. 70-81, inclusive.

ROYAL ACADEMY. A royal decree effected an important reorganization, the membership being increased to 42, eight of whom shall represent the non-Castilian languages of Spain. To fill these chairs the following scholars were elected: Catalan and its dialects (Valencian and Majorcan), Antonio Rubió y Lluch, Engenio d'Ors, Luis Fullana y Mira, and Lorenzo Ribes; Gallegan, Armando Cotarelo y Valledor and Ramón Cabanillas; and Basque, Julio de Urquijo and Resurrección María de Azcue. Two other vacancies were filled by electing Antonio Machado y Ruiz, poet and dramatist, and the Conde de Gimeno, eminent statesman and physician. The Academy awarded the following prizes: Premio Fastenrath to Antonio Porras, for his novel, *El Centro de las almas*; Premio Mariano de Cavia, to the journalist, Manuel Siurot; and Premio Chirel to Emiliano Ramírez Ángel for a collection of articles on customs.

NECROLOGY. Spanish letters suffered heavily both at home and abroad. From the Academy's ranks went Daniel de Cortázar and Miguel Echegaray, a dramatist, like his greater brother José. (See YEAR BOOK, 1916.) Other losses were José Rodao, Segovian poet; Patrocinia de Biedma, poetess; F. Pérez Mateos, editor of

La Época; Rafael Gasset, ex-minister of the Liberal party and director of *El Imparcial*; Julio Cejador y Frauca, philologist. Alejandro Pérez Lugín, novelist, and Antonio Paz y Melia, humanist (see PAZ Y MELIA, ANTONIO). Losses abroad will be found under SPANISH-AMERICAN LITERATURES. See also PHILOLOGY, MODERN.

SPECTROSCOPY. See ASTRONOMY; CHEMISTRY, under *General Chemistry*; PHYSICS.

SPIRITUALISM. See PSYCHICAL RESEARCH.

SPIRITUALIST ASSOCIATION, NATIONAL. An organization maintaining the religious belief that the spirit world forms a counterpart of the world of common experience. Spiritualism originated as a doctrine in the writings of Andrew Jackson Davis, 1845. Its local groups came into existence in considerable numbers in many parts of the United States between 1850 and 1872. The national organization of these groups took the form of the present association in 1893. In 1927 it comprised 22 State associations and many local societies and churches in territory outside the State organizations. The general activities of the organization are carried on through four bureaus: that of Progressive Lyceums (Sunday Schools); the Bureau of Phenomenal Evidence; the Bureau of Propaganda; and the Bureau of Education. The organization conducts the Morris Pratt Institute, Whitewater, Wis., and issues the periodicals *Progressive Thinker*, *Banner of Life*, *Reason*, and *The National Spiritualist*. Officers in 1927 were: president, Joseph P. Whitwell, St. Paul, Minn.; secretary, the Rev. Harry P. Strack, Washington, D. C.; treasurer, F. W. Constantine, Buffalo, N. Y. Headquarters are in Washington, D. C.

SPITZBERGEN. See WEST SPITZBERGEN; also SVALBARD.

SPLÉNEN. See CHEMISTRY, under *Biochemistry*.

SPORTS. Articles covering the activities in the various sports during 1927 will be found under such titles as ATHLETICS, BASEBALL, FOOTBALL, GOLF, RACING, TENNIS, etc.

SQUASH. See RACQUETS.

SQUIRE, WILLIAM BARCLAY. British musicologist, died at London, January 14. He was born at London, Oct. 16, 1855. After some years of study at Frankfort-on-the-Main he graduated, in 1879, at Cambridge, and was admitted to the bar in 1883. Two years later, he definitely abandoned law when he was appointed keeper of the printed music in the British Museum. This position he filled with signal success until his retirement in 1920, but he retained his connection with the museum as honorable curator of the Royal Music Library. His entire life was spent in musical research. Of several valuable catalogues prepared under his direction the most important is the *Catalogue of Old Printed Music in the British Museum* [1487-1800], which appeared in two volumes (1912).

STALKER, JAMES. Minister of the Free Church of Scotland, died in Florence, Italy, in February. He was born at Crieff, Scotland, Feb. 21, 1848, and was educated at the universities of Edinburgh, Halle and Berlin. He held pastorates at Kirkcaldy and Glasgow, 1874-87; delivered the Lyman Beecher lectures on preaching at Yale University, 1891; was lecturer at Richmond, Va., 1914, and was professor of church history in the United Free Church, Aberdeen, 1902-26. His works were widely read

by English-speaking people, and some of them were translated into several languages. Among them are: *The Life of Jesus Christ* (1879); *The Life of Saint Paul* (1884); *The Preacher and his Models* (lectures delivered at Yale) (1891); *The Ethics of Jesus* (1909); *Know Thyself* (1914); *Christian Psychology* (1915); *The Beauty of the Bible* (1921).

STANFORD UNIVERSITY. A non-sectarian, coeducational institution of higher education at Stanford University, Cal.; founded in 1891, in memory of Leland Stanford, Jr. The enrollment for the autumn quarter of 1927 was 3434, and for the summer quarter 1393. The faculty numbered 493. The productive funds of the university amounted to \$29,228,632, and the budget income for the year, including fees, was \$2,652,174. The library contained 475,037 volumes (including the Hoover War Library). Gifts received during the year were: For research and scholarships, \$215,513; special funds, \$3,886; for new buildings, \$27,005; for endowment \$155,582. President, Ray Lyman Wilbur, M.D., Sc.D., LL.D.

STANTON, FRANK LEBBY. American poet and song writer, died January 7, at Atlanta, Georgia. Born at Charleston, S. C., Feb. 22, 1857, he began to write poetry at the age of 11. He was early apprenticed in a printing office. While employed as copy boy for the *Savannah News* he attracted the attention of Joel Chandler Harris by verses which he wrote in odd moments. In 1880 he joined the staff of the *Atlanta Constitution* for which he was columnist and song writer during the remainder of his life. He wrote "Mighty Lak' a Rose," "Just A-Wearyin' for You" and "Li'l Feller." The first collection of his poems appeared in 1892 under the title of *Songs of the Soil*; other collections were *Comes One with a Song* (1899); *Songs from Dixie* (1900); *Up from Georgia* (1902); and *Little Folks Down South* (1904). He was made poet laureate of Georgia by proclamation of Governor Walker in 1925. Most of his songs, written in the dialect of the old Southern negro, are a faithful record of the folklore and poetry of the old-time negro.

STEAM. See BOILERS.

STEAMBOAT INSPECTION SERVICE, UNITED STATES. See SAFETY AT SEA.

STEAM ENGINES. The status of the reciprocating steam engine for stationary service remained practically unchanged. The number of builders, once large, had become relatively small, two more having gone out of business during 1927. Yet the steam engine had by no means passed out of the picture in the face of strong competition from the steam turbine, the oil engine and the central station. According to the latest U. S. industrial census report, out of a total of nearly 30,000,000 primary horse power installed in the manufacturing plants of the country 11,500,000 were in steam engines. A considerable number, in sizes up to 500 horse power, were built in 1927 for service in industrial plants, public and other buildings, etc. Among these the uniflow type predominated, with an occasional installation of the Corliss

type to meet special conditions or to satisfy the preference of the purchaser.

STEAM TURBINES. In central station practice the trend was toward fewer and larger generating units. Steam turbine generators of 50,000 kilowatts and over were no longer the exception in the United States, but were becoming quite the rule in new stations and extensions to existing plants wherever the system load would permit. In Europe, while there was a noticeable trend toward larger units, few compared in size with those in the United States, chiefly because the system loads were smaller, and to some extent probably because of an apparent hesitancy in placing so much capacity in single units.

The 208,000-kilowatt cross-compound 1800-r.p.m. unit under construction for the State Line station, at the southern end of Lake Michigan, near Hammond, Ind., remained the largest yet undertaken. A 165,000-kilowatt cross-compound machine was being built for the Philo station of the Ohio Power Co., and one of 160,000 kilowatts for the Hell Gate station in New York. The New York Edison Co. had placed an order for a 160,000-kilowatt tandem-compound unit which would represent the largest capacity on a single shaft and included a single generator that would have two sets of windings, each delivering 80,000 kilowatts. It will operate on 25 cycles at 1500 r.p.m. and will be installed in the new East River station. Other outstanding units under construction, or being installed, include a 110,000-kilowatt cross-compound 1800-r.p.m. two-cylinder machine for the Brooklyn Edison Co., a 104,000-kilowatt tandem cross-compound and a 91,500 cross-compound for the Crawford Ave. station in Chicago, two 94,000-kilowatt tandem-compound turbines for the Southern California Edison Co., a 65,000-kilowatt single-cylinder 1800-r.p.m. machine for the Edgar station of the Edison Electric Illuminating Co. of Boston, and a 75,000-kilowatt single-cylinder turbine generator for the Huntley station in Buffalo, the last named representing the largest capacity yet undertaken in a single cylinder. The Detroit Edison Co. had ordered two 50,000-kilowatt machines, and the Superpower Co. of Illinois, one of 55,000 kilowatts for its station at Pekin, Illinois.

There was a noticeable tendency no longer to confine the large units to the lower speeds but to go up to 1800 r.p.m. in these sizes in many cases. The largest turbine generators to be built in the United States for export were two 52,500-kilowatt tandem-compound units shipped to Buenos Aires.

Several of the foregoing units were to operate on 550 to 600 pounds steam pressure, and 700 to 750 deg.; all were designed for stage bleeding and two or three for operating on the reheating cycle. The use of bleeder heaters results in lower heat consumption. During the year the first turbine unit to employ steam for reheating went into service at the Crawford Ave. station in Chicago. Improvements in governing devices continued, and several companies were experimenting with chromium and nickel-chromium corrosion-resistant steels for turbine blading. In the range of extremely high pressure a 10,000-kilowatt, 1200-pound turbine went into service at the Edgar station, and one of 7,000 kilowatts, 1200 pounds, at the Lakeside station in Milwaukee. This was in addition to the

3,000-kilowatt, 1200-pound machine that had been in service for two years at Edgar station.

A 10,000-kilowatt mercury vapor turbine had been built for the South Meadow station of the Hartford Electric Light Company.

Higher steam pressures were coming into use in industrial power plants, accompanied by higher back pressures where the turbines exhaust steam to process. One 750-pound, 4750-kilowatt turbine, exhausting at 125 pounds, went into service, and a number were operating at 350 to 400 pounds with exhaust at 40- to 90-pound back pressure. Bleeder turbines also have been highly developed for industrial service and were installed in relatively large numbers. One interesting machine of this type reported bled its whole steam flow for process use and then took 75 per cent of the original flow at atmospheric pressure and expanded to the final exhaust vacuum. This was to be installed in an oil refinery.

European practice tended toward the employment of a greater number of stages with small pressure drops in order to attain economy. Due to improvements in design, the high-pressure stages of some of these European turbines showed as great, if not greater efficiency than the low-pressure stages. In Germany the outstanding installation was the new Rummelsburg station of the City of Berlin, which contained three 70,000-kilowatt cross-compound four-cylinder turbine generators operating on 463 pounds steam pressure and a temperature of 750 degrees. Several 40,000-kilowatt units were also operating in German power stations.

In England the extension to the Barking station was to employ a high-pressure unit, operating somewhat along the lines of those at the Edgar and the Lakeside stations in the United States. A 2500-kilowatt turbine would take steam at 1000 pounds, 800 degrees, and exhaust into the regular station main at 210 pounds. A 25,000-kilowatt unit was purchased for operation at the lower pressure, bringing the capacity of the station up to 54,000 kilowatts. Several other machines of 25,000-kilowatt capacity and one of 38,000 k.v.a. had been constructed for British stations and the Ljungstrom Company of Sweden, through its British licensee, the Brush Company, had constructed a 12,500-kilowatt Ljungstrom turbine, which represented the largest radial-flow turbine built to the end of the year, although one of 40,000 kw. had been designed.

In France, 50,000-kilowatt turbines were in operation at Gennevilliers station; and the 750-pound, 800-degree turbines at Langerbrugge station in Belgium had been in successful operation for some time, and three more machines were on order.

STEEL. See IRON AND STEEL; CHEMISTRY, INDUSTRIAL.

STEIN, HERMANN VON. German general, died at Lehnin, Brandenburg, May 27. He was born in Wedderstedt, Prussia, in 1854. At the outbreak of the World War he held the position of quartermaster general of the German forces, a post which he turned over to Ludendorff in October, 1914. General von Stein then commanded the reserve army corps, until his appointment as Prussian War Minister in October, 1916; he remained in office until October, 1918. Relieved of his post, the retired leader got himself into new trouble by the publication of

his memoirs, which roused the ire of high Austrian officers.

STELLAR EVOLUTION. See ASTRONOMY.

STENHAMMER, WILHELM. Swedish composer and conductor, died at Stockholm, November 20. He was born there, Feb. 7, 1871. After graduation at the Stockholm Conservatory in 1892, he continued his studies under Heinrich Barth in Berlin, and he began his career as a concert pianist. From 1897 to 1900 he was conductor of the Philharmonic Society of Stockholm, and during the season of 1900-01 he was second conductor at the Royal Opera there. After a tour of Germany and Italy, he settled in 1907 in Göteborg as conductor of the Korförening and the Orkester-förening, holding both positions till his death. His works include three operas, *Tirfing* (Stockholm, 1898), *Das Fest auf Solhaug* (Stuttgart, 1899; in Swedish in Stockholm, 1903), and *Chitra* (Göteborg, 1921); a Symphony in F; two piano concertos; a violin concerto; four string pieces for quartets, and several large works for chorus with orchestra.

STERILIZATION. See CHILD WELFARE.

STERNBERG, DR. LEV. Russian-Jewish scholar, died in Moscow August 17. Born in Moscow in 1861, he received his education at the University of St. Petersburg. Dr. Sternberg acquired world-wide fame as an ethnographer and anthropologist. He was professor at the University of Leningrad and a member of the Russian Academy of Science. He took an active part in the Russian liberation movement, and in his early youth was sentenced by the Czarist government to serve three years in a cell and ten years on the Island of Sakhalin.

STEVENS, WALTER LEONTE. American physicist, died at Lexington, Va., December 29. He was born at Macon, Ga. in 1846, and graduated at the University of South Carolina in 1868. He studied at Strassburg, Berlin, and Zurich, 1890-92, and received the honorary degree of Ph.D. from the University of Georgia. Dr. Stevens was head of the department of physics at Rensselaer Polytechnic Institute, Troy, N. Y., 1892-98, and then at Washington and Lee University, until 1921, when he retired from active teaching. He was the author of a revision of *Steele's Physics* and of contributions to encyclopedias and scientific magazines.

STEVENS INSTITUTE OF TECHNOLOGY. A non-sectarian institution for the technical education of men, at Castle Point, Hoboken, N. J., founded in 1870. The enrollment for the autumn of 1927 was 446 and for the summer session of the same year 98. There were 50 members on the teaching staff. The productive funds amounted to \$2,908,042, and the income for 1926-27 was \$280,297. The library contained about 19,000 volumes. During the year the Institute received \$54,762 in gifts. The acting president was Dr. Frank L. Sevenoak, taking the place of Dr. Alexander C. Humphreys (q.v.), whose resignation took effect June 5, 1927, and who died August 14.

STOCKS AND BONDS. See FINANCIAL REVIEW; RAILWAYS.

STOKES, ADRIAN. British pathologist, died at Lagos, West Africa, September 19. He was born in Lausanne, Switzerland, in 1887, and was educated at Trinity College, Dublin, where he obtained the degree of M.D. in 1911. Becoming connected with the teaching staff of Dublin Uni-

versity, he carried on extensive investigations in pathology. Through the World War he served in the Royal Army Medical Corps. His discovery that jaundice was carried by rats gave him an international reputation. He visited Africa in 1920 as a member of the Rockefeller Commission on Yellow Fever. In 1922 he was appointed Professor of Pathology at London University. Early in 1927 the Rockefeller Commission in Africa invited Dr. Stokes to go there again. By means of experiments on chimpanzees he had made definite and substantial progress toward solving the problem of the transmission of yellow fever and its causative organism, when he himself was struck down by the fever. See **YELLOW FEVER**.

STONE. The U. S. Bureau of Mines estimated the total stone sold and used by producers in the United States in 1926 at 124,496,360 short tons, valued at \$188,308,590, or about 7 per cent more in quantity and 8 per cent more in value than in 1925, when the totals were 115,851,370 tons and \$174,210,792, respectively. In 1926 production (in short tons) with value, included the following: Granite, 9,330,390 tons, valued at \$32,044,523; basalt and related rock (trap rock) 12,977,740 tons, \$15,950,302; marble, 536,170 tons, \$14,167,480; limestone, 91,887,900 tons, \$109,252,299; sandstone, 4,978,530 tons, \$11,149,029; and other stone, 4,758,630 tons, \$5,744,957. On the basis of use the principal item in 1926, as in previous years, was crushed stone, where the production had a value of \$87,872,014, followed by building stone, \$39,922,851, furnace flux (limestone and marble) \$18,049,102; monumental stone, \$14,580,929; rip-rap \$4,652,717; manufacturing industries, \$4,376,026; curbing, \$4,303,280; paving block, \$3,399,002; refractory stone, \$1,925,832. The principal building stone used in the United States in 1926 was limestone, amounting to 18,537,950 cubic feet, valued at \$20,391,579, followed by granite with 8,181,910 cubic feet, \$6,883,513; marble, 2,867,950 cubic feet, \$9,419,939, and sandstone, 3,346,550 cubic feet, \$3,154,207.

In 1926 the imports of marble, breccia and onyx amounted to 863,219 cubic feet, valued at \$1,783,767, as compared with 954,093 cubic feet, valued at \$2,530,806 in 1927. The exports of stone from the United States in 1926 had a total value of \$1,583,245, which included marble blocks and other building or monumental stone to the value of \$687,115 and other manufactures of stone to the value of \$896,130. See **CHEMISTRY, INDUSTRIAL**.

STONE, ELLEN MARIA. American missionary teacher, died at Chelsea, Mass., December 13. She was born at Roxbury, Mass., in 1846. As a young woman she taught school, and in 1879 became a Congregational missionary in the Near East, serving in Bulgaria and Macedonia. In 1901 Miss Stone was set upon by brigands in Macedonia and carried into captivity. Word was received at the American Legation in Constantinople that unless a ransom of \$110,000 was paid Miss Stone would be killed. The news created a wave of excitement in the United States and a popular subscription was begun to raise the ransom. After being held for six months Miss Stone was released. She returned to the United States in 1902, and wrote and lectured on her experiences, to raise money for foreign missions.

STONE AGE. See **ANTHROPOLOGY**, under *Pre-history*.

STRACHEY, strá'chí, JOHN ST. LOE. English author and editor, died in London August 26. He was born in Somerset, Feb. 9, 1860, the second son of Sir Edward Strachey, and was educated at Balliol College, Oxford, later reading for the bar in London. He decided to devote himself to journalism, in which he spent his entire life. At first he wrote for the *Saturday Review*, the *Standard*, the *Economist*, and other papers and magazines, and in 1886 became an editor of the *Liberal-Unionist*. From 1896 to 1897 he was editor of the *Cornhill Magazine*, and about this time established a connection with the *Spectator*, for which he had reviewed books. Later he became its editor and proprietor, a connection he maintained until December, 1925, when ill health caused his retirement, though he continued to write for that journal intermittently until his death.

Mr. Strachey was a champion of free trade in the early days of the Liberal-Unionist party, in opposition to Joseph Chamberlain, and was known as a "Democrat Imperialist." He also believed in the work on behalf of English-speaking cooperation and in the friendship of the British commonwealth with the United States of America. He frequently visited the United States and Canada, being enthusiastically received. In 1925 he received the honorary degree of Litt.D. from Columbia University. His writings included: *From Grave to Gay*; *The Manufacture of Paupers* (1907); *Problems and Perils of Socialism*; *The Practical Wisdom of the Bible* (1908); *A New Way of Life* (1909); *The Adventure of Living* (1922); *Economics of the Hour* (1923); *The Referendum* (1923); *The River of Life* (1924); *The Madonna of the Barricades* (1925); and *American Soundings* (1926).

STRAITS SETTLEMENTS. A British crown colony in Malaysia, consisting of Singapore, Penang (with Province Wellesley and Dindings), and Malacca. The area is approximately 1600 square miles; population, according to the census of 1921, 883,769; estimated in 1925, 976,818. The estimates for the various parts in 1925 were as follows: Singapore, 217 square miles, with 485,091 inhabitants; Penang (with Province Wellesley and Dindings), 280 square miles, with 310,337 inhabitants; Malacca, 720 square miles, with 172,390 inhabitants. In 1925 there were 214,692 immigrants from China and 70,198 from Southern India. The movement of population in 1925 was: Births, 31,665; deaths, 27,106. The seat of the government is Singapore. In 1925 there were 263 schools (all government-aided), with an enrollment of 41,349, and an average attendance of 38,689. The chief interest is commerce, mostly transit trade (the ports are free from customs duties). The centre of trade is Singapore. The accompanying table from the *Statesman's Year Book* for 1927 shows exports and imports, exclusive of treasure, in 1925:

	Imports 1925 £	Exports 1925 £
Singapore	116,844,744	104,982,834
Penang	36,967,407	35,681,330
Malacca	5,123,615	8,818,882
Labuan	474,721	515,111
Christmas Islands	57,844	208,108
Dindings	119,762	480,981

The chief imports in that year, according to value, were: Para rubber, tin ore, rice, cotton piece goods and yarn, tobacco, cigars, and cigarettes, sugar, and dried and salted fish. The chief exports, also according to value, were: Para rubber, tin, copra, pepper, preserved pineapples, tapioca, and sago. In 1925 the revenue was £6,282,612 and the expenditure £8,719,295. The total number of merchant vessels entered at the ports of the colony in the same year, exclusive of native craft, was 10,650, with a tonnage of 17,532,906 tons; native craft, 31,901 of 1,101,647 tons. The number of vessels cleared was 10,637 of 17,499,221 tons; native craft, 33,012 of 1,148,839 tons. In 1920 the total tonnage entered and cleared at all ports was 38,028,630 tons.

The administration is under a governor, aided by an executive council of official members, and a legislative council of official and unofficial members, the latter being nominated or selected by the chambers of commerce of Singapore and Penang. Governor at the beginning of 1927, Sir Laurence N. Guillemard (also High Commissioner for the Federated Malay States and Brunei, and British Agent for North Borneo and Saravak). On Mar. 24, 1927, Sir Hugh Clifford, Governor of Ceylon, was appointed Governor. Under the administration of the Straits Settlements are the Christmas Islands (q.v.), annexed in 1900; Cocos or Keeling Islands, annexed in 1903; and the colony of Labuan, annexed Jan. 1, 1907.

STRIKES AND LOCKOUTS. COAL STRIKE. The outstanding industrial conflict of the year 1927 in the United States was the strike of bituminous coal miners in the central competitive field, including the States of Illinois, Indiana and Ohio, and western Pennsylvania. The strike began April 1, and involved 200,000 men. The strike followed the failure to renew the Jacksonville agreement, made in February, 1924, which provided for: (1) Recognition of the wage scale contracts set up between the operators and the United Mine Workers of America; (2) the calling of another conference three years later. At the 1927 conference held at Miami in February the operators insisted upon wage reductions, while the miners demanded a renewal of the prevailing contracts for two years. Failure to agree ended in the strike. As the strike progressed it became evident that mining operations were being affected in at least 10 States, Illinois, Pennsylvania, Ohio, Indiana, Arkansas, Kansas, Oklahoma, Missouri, Iowa, and West Virginia.

The United Mine Workers gave its consent to the resumption of work where the operators were willing to accept the Jacksonville agreement, and such arrangements were effected in certain of the districts. District 11, in Indiana, resumed work in the middle of April; other agreements were reached with 88 mines in Illinois, 62 in western Pennsylvania, 45 in Iowa, 24 in Kansas, etc. Conferences affecting the central Pennsylvania field, held at Philadelphia in June, failed and the men there, too, went out.

The first attempt at public participation toward a settlement came when Governor Donahy of Ohio, on August 2, sought to enlist the

aid of the Governors of Indiana and Illinois toward reconvening the conference of miners and operators. The courts entered the scene when an injunction against the miners of southeastern Ohio was issued August 15, restraining them from interfering with the operations of the mines, some of which were running at only 5 per cent capacity. On August 30, another injunction was issued against the District 2 miners of central Pennsylvania. On the other hand, Governor Hamill of Iowa, on September 1, for the third time rejected the request of Iowa operators for the dispatching of State troopers to protect non-union miners who were attempting to work some of the mines.

On October 1 it was reported from Chicago that both sides had reached an agreement affecting the State of Illinois. This meant that 72,000 men were to return to work after a strike of six months. The declaration of truce was followed immediately by similar ones in Iowa, Indiana and the district embracing Kansas, Missouri, Oklahoma and Arkansas. The chief point of agreement was the resumption of work on the basis of the Jacksonville wage rate of \$7.50 per day, pending a study to be made by miners and operators of the Illinois coal situation. The report was to be submitted to miners and operators jointly on Feb. 7, 1928, when a new wage scale and working conditions were to be prepared.

The Indiana agreement was similar to the one reached in Illinois. These events, with those of April, left only the miners of Ohio and western Pennsylvania still out.

The course of the strike was attended by surprisingly few disorders. Towards the end of the year, however, much bitterness was occasioned among union men by the effective aid being rendered the operators through the injunction. One of the most sweeping court orders of this kind was the one handed down by Judge J. F. Schoonmaker, at Pittsburgh, September 30, October 11, on the application of the Pittsburgh Terminal Coal Corporation. This restrained the men: (1) From occupying the company houses; (2) interfering in any way with the operations of the company's non-union mines. (See articles LABOR and TRADE-UNIONS for fuller discussions.) The order aroused much indignation. Affairs were at this stage when the year closed.

COLORADO STRIKE. Another important strike broke out in Colorado, October 11, when the International Workers of the World called out 4000 miners for a "flat scale of \$8.50 a day for all classes of mine workers, a six-hour day and a five-day week." Disorders began at once. A large number of local I. W. W. leaders were arrested in the southern field, and this was followed by the cessation of picketing. Newspapers then reported the resumption of operations on the part of a number of mines.

On November 21, however, disorders broke out in the northern field. A group of miners, advancing on the Columbine mine, near Denver, was fired upon by mine guards and State police, and five persons were killed and 20 wounded. The State National Guard was dispatched to the area by the Governor and the military commander was given the right to declare martial law if he saw fit. By the end of the year no settlement had been made.

OTHER OUTSTANDING STRIKES. On July 8, in

Chicago, some 3000 tank-wagon drivers and filling-station attendants went on strike for higher wages. In a day the strike was settled. This was interesting in view of the fact that the tying up of a comparatively minor industry caused such acute distress that public opinion virtually compelled the cessation of hostilities.

On August 29, in Chicago, a strike of motion-picture operators closed 350 or more theatres, because of the failure of one of the theatres to employ the required number of operators. It ended in a compromise.

On September 7, 6000 New York truckmen went out on strike for a wage of \$45 and an eight-hour day. In a few days a settlement was reached whereby the wage increase was granted. The men gave up the eight-hour day demand as well as a demand for \$1.20 per hour (instead of \$1) for overtime.

On October 1 began a strike of glass workers in a number of States. The strikes involved largely the American Window Glass Co., the Libbey-Owens Sheet Glass Co., and a group of independent cylinder machine manufacturers. The workers demanded wage increases; the employers countered with demands for wage reductions. By October 6, the workers and officials in the American Window Glass Co. had reached an agreement providing for the renewal of the old wage scale. However, "for every two points the selling price is raised . . . the workers are to get one point advance in wages."

CANADA. The results of a study made by Ben M. Selekman for the Russell Sage Foundation of the working of the Canadian industrial disputes investigation act were published in *Postponing Strikes*. The report found that conciliation was much more effective than prohibiting legislation in settling strikes. Under the Canadian system 536 disputes were handled by boards set up to consider particular strikes, and of these 490 were amicably settled or averted. In 425 other strikes the act was completely ignored. This was the history of 18 years.

In 1927 in the Dominion of Canada, 77 strikes were in progress, involving 598 employers, 24,142 employees, and 296,811 days lost. In 1925, when there had been 83 strikes and 25,798 strikers the total number of days lost was 1,743,996. For Japan, in 1926, there was reported a total of 1005 disputes involving 100,000 workers. See also UNEMPLOYMENT, for British strikes in 1927.

STUDENTS IN UNIVERSITIES AND COLLEGES. See UNIVERSITIES AND COLLEGES.

STUDY, COURSES OF. See EDUCATION.

STYRIA, stîr'î-â. A crownland of Austria before the collapse of the Austro-Hungarian Empire; the greater part of Styria was retained in the new republic of Austria after the treaty. Area before the war, 8862 square miles, with a population of 1,441,157 (as estimated on Dec. 31, 1910). Area and population, according to the census of Mar. 7, 1923, 6323 square miles and 978,845 inhabitants.

SUAREZ, MARCO FIDEL. Former president of Colombia, died at Bogotá, April 4. He was born in Hatoviego, Apr. 23, 1855, and educated at Antioquia Seminary. After holding several posts in the government, he was elected president of the Republic in 1918. A controversy between President Suarez and the Chamber of Deputies arose in November, 1921, and his resignation followed.

SUBMARINE BOAT. See NAVAL PROGRESS.

SUBWAYS. See RAPID TRANSIT.

SUCHER, sukh'ër, ROSA. Austrian dramatic soprano, died at Eschweiler, Germany, April 19. She was born at Velburg, Feb. 23, 1849. After completing her musical education at the Königliche Musikschule at Munich, she began her career, under her maiden name of Hasselbeck, as a church singer in Freising. A successful operatic début at Treves, in 1873, was followed by engagements in Königsberg, Berlin, Danzig and Leipzig, in which last-named city she was married, in 1877 to the eminent conductor Josef Sucher. Under his direction she developed from a charming interpreter of youthful rôles into one of the world's greatest Wagnerian singers. After her husband's death in 1908 she settled in Vienna as a teacher. She published her memoirs, under the title *Aus Meinem Leben* (Leipzig, 1914).

SUDAN, ANGLO-EGYPTIAN. A territory in the Nile region of Africa, extending south from Egypt to British East Africa and the Belgian Congo; bounded on the east by the Red Sea, Eritrea, and Abyssinia, and on the west by French Equatorial Africa; under British authority. Area estimated at 1,014,400 square miles; population in 1925 estimated at 6,469,041. Capital, Khartum, with a population of 30,797; other cities, Omdurman, 78,624; Khartum North, 14,319. On Jan. 1, 1926, the elementary, vernacular schools numbered 90 with about 7900 pupils; there are also 10 primary schools.

The Sudan is the source of 85 per cent of the world's supply of gum arabic. Exports of Sudan gum reached \$3,306,000 in the first eight months of 1926. Durra, or millet, is the chief food crop of the Sudan, so important that in some of the more remote districts durra prices control those of other commodities. The average crop is about 194,000 tons. Since this vital crop is a "rain crop," the natives' prosperity depends considerably upon the rainfall. Its lack was felt particularly in the 1925-26 season, reducing production to 75,000 tons. With the development under the Sudan Plantations Syndicate of the great Gezira irrigation project in the triangle between the Blue and White Nile Rivers south of their junction at Khartum, interest in cotton growing has had a great impetus. Total seed cotton production in the 1925-26 season amounted to 132,000,000 pounds of sakelleridis, 18,000,000 pounds of American irrigated, and 10,000,000 pounds of American rain-grown cotton. The estimated production of ginned cotton in the 1926-27 season was about 26,000 tons. Other important products of the country are senna, sesame, dates, groundnuts, and colocynth pulps. Vegetable ivory and real ivory are also shipped from the Sudan. Imports in 1927 totaled £E6,155,310 and exports and reexports £E5,229,420, as against £E5,574,400 and £E5,190,500, respectively, for 1926. Great Britain easily leads in Sudan's foreign trade, buying over three-fourths of its exports and supplying nearly one-third of its imports.

The budget estimates for 1926 balanced at £E5,210,000. The railroad mileage is approximately 1800, and there is regular service by government passenger and cargo steamers for about 2500 miles on the Nile and its tributaries. Under a convention between the British and Egyptian governments signed at Cairo, Jan. 19,

1899, the region south of the 22nd parallel of latitude is administered by a governor-general appointed by the Egyptian government with the assent of Great Britain. The Sudan has been divided into 15 provinces, each under a governor. Since 1910 the governor-general has been assisted by a council. Governor-general in 1927, Sir John L. Maffey.

SUEZ CANAL. A new record was established in 1927 in both the number of ships and the tonnage passing through the Suez Canal, when 5544 ships were reported, with a net tonnage of 28,961,707, as compared with the previous high records of 5373 vessels in 1912 and 26,761,935 tons, in 1925. A comparison of the average sizes of vessels in 1927 and 1926 showed that there was a slight decrease in 1927, when the vessels averaged 5225 tons, as against 5233 tons in 1926. These figures, however, were considerably above the 1925 average tonnage, which was 5014. The receipts for 1927 from tonnage totaled 203,940,000 francs, as against total receipts of 183,863,000 francs in 1925. Receipts from passenger traffic totaled 3,175,000 francs in 1927 as compared with 2,642,000 in 1926, while miscellaneous receipts were 1,351,000 francs, making a total of 208,651,000 francs for 1927.

The accompanying table* gives the Suez Canal commercial traffic statistics by flags for the year ending Dec. 31, 1928.

Flag	Number of transits	Net tons
American	116	709,666
Belgian	6	21,748
British	2,744	14,968,938
Chinese	1	1,465
Danish	75	331,392
Dutch	544	2,858,944
Egyptian	6	8,644
Ecuadorian	2	8,226
Finnish	7	22,189
French	389	1,735,926
German	424	2,153,873
Greek	28	77,406
Italian	332	1,847,807
Japanese	160	946,234
Jugo-Slavian	2	8,374
Norwegian	112	492,054
Panamanian	1	13,324
Russian	7	44,021
Sarawakian	1	554
Spanish	16	48,821
Swedish	57	265,776
Total	4,980	26,060,877

The statistics for east-bound and west-bound freight cargoes in 1926 showed that although there was some decrease in the east-bound business, the west-bound traffic, on the contrary, showed an increase of over 1,000,000 tons, a result all the more satisfactory in view of the fact that the passage of English sea-coal was reduced, because of the strike, by more than 400,000 tons. The strike brought about the shipment through the canal of more than 200,000 tons of coal from such sources as Bengal, southern Africa, Australia and Japan.

Late in the year the Suez Canal Company announced a reduction of 0.25 franc in canal tolls, effective Apr. 1, 1928. From that date tolls were to be collected at 7 gold francs per net ton Suez Canal measurement for laden ships, and at 4.50 gold francs for ships passing through the canal in ballast. (One gold franc equals \$0.193.)

* Compiled from the *Suez Canal Bulletin*, June 15, 1927, for all ships passing through the canal during 1926.

SUGAR. The world's sugar production for the season 1927-28, as estimated by Willett & Gray Jan. 5, 1928, was 24,892,550 tons, compared with 23,590,077 tons in 1926-7, and 24,583,909 in 1925-26. Of the total production in 1927-28, sugar from cane constituted 15,809,550 tons, compared with 15,900,329 in 1926-27; and beet sugar 9,083,000 tons, compared with 7,689,748 in 1926-27.

Floods in Louisiana reduced the sugar-growing area and raised the serious question of insuring seed for planting in the flooded sections in the Fall of 1927. To protect the crop partly from the ravages of the borer, the U. S. Department of Agriculture turned over an appropriation of \$50,000 for dusting by airplane, adequate to cover about 5000 acres. The production of sugar from cane in Louisiana was only 55,000 tons, which was somewhat more than in the preceding season and compared with 124,447 tons in 1925-26. As usual, Cuba led all other countries in sugar production, the amount reported being 4,000,000 tons. In the previous year a restriction to 4,500,000 tons was placed on the crop (See *YEAR BOOK*, 1926), and early in 1927 it was announced that the policy of restriction would be maintained to keep the price of sugar from falling below the cost of production. Later a limit of 4,000,000 tons was fixed.

The estimated production of cane sugar by other leading countries was as follows: Porto Rico 596,000 tons; Hawaiian Islands, 720,000; British West Indies, 217,000; French West Indies, 76,000; Santo Domingo, 300,000; Mexico, 175,000; Central America, 95,000; Demerara, 100,000; Peru, 290,000; Argentina, 425,000; Brazil, 650,000; other South American countries, 60,000; British India, 3,200,000; Java, 2,350,050; Formosa and Japan, 600,000; Philippine Islands, 600,000; Australia, 485,000; Fiji Islands, 95,000; Egypt, 88,000; Mauritius, 215,000; Réunion, 56,000; Natal, 241,500; Mozambique, 70,000.

The sugar-beet acreage in the United States was somewhat larger than in 1926, and the estimated production of sugar was 925,000 tons, compared with 801,246 in 1926 and 804,439 in 1925. The Canadian crop was placed at 30,000 tons. Germany led in European beet-sugar production with 1,665,000 tons, followed by Russia and the Ukraine with 1,500,000, Czechoslovakia with 1,265,000, and France with 870,000.

The annual consumption of sugar in the United States increased by nearly 3,000,000 short tons since 1909. Consumption in Europe returned to at least pre-war levels; but for the world at large sugar consumption increased during the year less than 2 per cent.

Negotiations were entered into by representatives of Cuba, Germany, Czechoslovakia and Poland, the chief of the world's sugar-exporting countries, looking to a plan for restricted production. Holland, which has large sugar interests in the Dutch East Indies, declined to attend the preliminary meeting.

An event of particular significance to the sugar trade of the United States was a meeting held early in December for the purpose of bringing about an agreement among refiners to eliminate special concessions and other irregular practices in the sale of sugar.

SUGAR ANALYSIS. See *CHEMISTRY*, under *Analytical Chemistry*.

SUICIDES. See *CHILD WELFARE*.

SULPHUR. The production of sulphur in the United States in 1927 showed a substantial increase over that of 1926, when 1,890,027 long tons were produced, and 2,072,657 tons with an approximate value of \$37,200,000 were shipped from the plants. In 1927, 2,111,618 tons were produced and 2,072,109 tons, valued at approximately \$38,300,000, were shipped. Texas continued to furnish practically the whole output. Mines in Nevada and Utah were in production, while a company in Louisiana was shipping from stock. The fertilizer industry required less sulphur in 1927 than in the previous year, while the pulp and paper industry consumed about the same amount. As in previous years, the United States continued to export substantial quantities of sulphur, the quantity for 1927 being 789,371 tons, valued at \$10,269,254, as compared with 576,766 tons, valued at \$10,918,394, in 1926. This made the 1927 exports by far the largest in the history of the industry. The increased demand was due partly to the difficulties encountered in maintaining production in Sicily, which in 1927 shipped about 240,000 long tons, and also to the improved industrial conditions in Europe. See **CHEMISTRY, INDUSTRIAL**.

SUMATRA. See **DUTCH EAST INDIES**.

SUMMERS, LELAND LAFLIN. American engineer, died at Whitestone, N. Y., March 10. He was born at Cleves, Ohio, Mar. 6, 1871, and, after working for the Western Union and Postal Telegraph Cable Companies, in 1894 became a consulting engineer in Chicago. At the outbreak of the World War he became technical adviser on munitions to J. P. Morgan & Company, who were the purchasing representatives of foreign governments in the United States. After the United States entered the War he served as technical adviser to the War Industries Board, where he outlined the explosives programme, and performed other services. America gave him its Distinguished Service Medal, France made him an Officer of the Legion of Honor, Italy an Officer of the Crown of Italy, and Belgium honored him with the Order of the Crown.

SUN. See **ASTRONOMY; PHYSICS**.

SUNDAY SCHOOL UNION, AMERICAN. A volunteer association, composed of members of different denominations of the Protestant church, whose object is to establish and maintain Sunday schools and to publish and circulate moral and religious publications. It was established in 1817 as the Sunday and Adult School Union. Through the contributions of individuals, churches and Sunday schools, it sustains missionaries and supports its general work, which is carried on by 13 districts. In the year ending Feb. 28, 1927, 774 schools were organized and 524 schools reorganized, with a total of 4078 teachers and 39,368 scholars. There were 156 Young People's Societies formed; 145 preaching stations opened; 28 churches of various denominations organized; and 11 churches built. During 1927 the Union commissioned 213 missionaries, 33 of whom served only part of the year.

The Union publishes and circulates books and supplies needed by the schools and homes which it serves. The largest of its publications is the *Sunday School World*. There were 488 enrolled in teacher-training classes during the year. Daily vacation Bible schools were held in rural communities. The income for the year ending

Feb. 28, 1927, was \$608,150 and expenditures \$595,636. The officers in 1927 were E. Clarence Miller, president; James M. Snyder, Barton F. Blake and Robert L. Latimer, vice presidents; William H. Hirst, recording secretary; John H. Talley, treasurer. National headquarters are at 1816 Chestnut Street, Philadelphia, Pa.

SUTRO, THEODORE. American lawyer and author, died at New York, August 28. He was born in Prussia, Mar. 14, 1845, and was brought to the United States in 1850. After graduating at Harvard University in 1871 and at Columbia University Law School in 1874, he was admitted to the New York bar. From 1895 to 1898 Mr. Sutro was Commissioner of Taxes for New York City, and for several years after this was the editor of *Das Deutsche Journal*. He wrote *The Sutro Tunnel Co. and the Sutro Tunnel* (1887), *Thirteen Chapters of American History* (1905), and also many articles on taxation, corporation law, and mining.

SVALBARD. An arctic archipelago in the eastern hemisphere, area 25,000 square miles, formerly known as Spitzbergen. It comprises all lands between 10 and 35 degrees east longitude, and between 74 and 81 degrees north latitude. By the treaty of Paris, Feb. 9, 1920, it was placed under the full and absolute sovereignty of Norway. The principal islands are West Spitzbergen, usually called Spitzbergen, Northeast Land, Barents Island, Edge Island, Wiche Islands, Hope Island, and Prince Charles Foreland. Norway assumed control in 1925 and has appointed a Governor, who lives at Green Harbor with a small staff. As all industries are conducted on Spitzbergen, they are treated under that head.

SWAIN, JOSEPH. American educator and former president of Swarthmore College, died at Swarthmore, Pa., May 19. He was born at Pendleton, Ind., June 16, 1857, and was graduated at Indiana University in 1883. He studied at the Royal Observatory, Edinburgh, 1885-86, after having been instructor of mathematics and biology from 1883 to 1885 at the University of Indiana, and he returned to become associate professor and later professor of mathematics, serving from 1885 until 1891. He was closely associated with David Starr Jordan, then president of the university. In 1891 he accompanied Dr. Jordan to Leland Stanford Junior University, where he was professor of mathematics until 1893, returning in that year to Indiana University to become its president, in which capacity he served until his election to the presidency of Swarthmore College in 1902. He retired in 1921 as president emeritus. The honorary degree of LL.D. was conferred upon him by Wabash College, Lafayette College, the University of Pennsylvania, Indiana University, and Swarthmore College.

SWARTHMORE COLLEGE. A non-sectarian coeducational college at Swarthmore, Pa.; founded in 1864 by the Society of Friends. The 1927 autumn enrollment was 553 full-time students, of whom 283 were men and 270 women. The teaching staff numbered 70. The endowment and productive funds amounted to \$3,500,000. The library contained 60,000 volumes. During the

year a gift of \$300,000 was received from the Clothier family for an auditorium in memory of Isaac H. Clothier, for 40 years a member of the board of managers. President, Frank Aydelotte, L.L.D.

SWAYTHLING, BARON (LOUIS SAMUEL MONTAGU). International financier, died in London, England, June 11. He was born in London, Dec. 10, 1869, and was educated at Cambridge University. Louis Samuel Montagu was the eldest son of the first Baron Swaythling. On the death of his father in 1911 he succeeded him in the peerage and as head of the firm of Samuel Montagu and Company, foreign bankers, of London, one of the leading banking houses of the city. Louis Samuel Montagu devoted his attention chiefly to international finance and to the Jewish interests with which his father had been associated. He was a life governor of the London Hospital and a benefactor of many Jewish institutions in the east end of London. During the World War he made his Southampton home a social centre for the officers and men of the American aviation camp.

SWAZILAND, swā'ze-land. A British protectorate in South Africa, situated north of Zululand, at the southeastern corner of the Transvaal; formerly under the South African Republic; controlled by the British government acting through a High Commissioner of the Union of South Africa. Area, 6678 square miles; population at the census of 1921, 112,838, of whom 2235 were Europeans. Capital, Mbabane. The inhabitants are largely of the Zulu type. The chief agricultural products are: Corn (the staple product), tobacco, millet, various vegetables, peanuts and cotton. The mineral resources are considered rich, but are undeveloped. The revenue for 1925-26 was £110,108 and the expenditure £97,047. As noted above, the territory is under the administration of the High Commissioner for South Africa, but the local administration is under a resident commissioner. Resident Commissioner, in 1927, D. Honey.

SWEDEN. A Scandinavian kingdom in the extreme northwestern part of Europe, occupying the eastern and larger part of the Scandinavian peninsula. Capital, Stockholm.

AREA AND POPULATION. The total area of Sweden is 173,105 square miles; the population, according to the census of 1920, was 5,904,489; estimated, Dec. 31, 1925, 6,053,562. The population per square mile in 1925 was 34.9. The movement of population in the same year was: Births, 105,989; deaths, 70,840; marriages, 37,231; immigrants, 5053; emigrants, 11,948, of whom 8637 migrated to the United States. Cities with more than 100,000 inhabitants at the beginning of 1926 were Stockholm, 442,528; Göteborg, 231,007; and Malmö, 116,348.

EDUCATION. Primary instruction is free and compulsory between the ages of seven and 14. In 1925 there were 26,507 teachers and 680,249 pupils in the public elementary schools. In the same year there were 77 public secondary schools with 29,392 pupils; 51 people's high schools with 3174 pupils; two high and seven elementary technical schools with about 2700 pupils. There are two universities, Upsala, founded in 1477, and Lund, founded in 1688. The former had 2906 students, and the latter 1985 students, in the fall of 1925. Besides, there are navigation schools, agricultural schools, veterinary schools, etc.

PRODUCTION. Sweden depends almost entirely upon its iron and its forests. Perhaps the most interesting feature of the country's industrial development is the close association of these two resources. The result is an interlocking system in which it is usual for a single corporation to control a power plant and to engage in the manufacture of both iron and steel and forest products. The value of all crops in 1925 was estimated at 1,102,000,000 kroner; there were 8,168,546 tons of iron ore raised in the same year (37,335 persons were engaged in mining). The value of the wood and paper industrial output, which employed 93,736 workers, was 875,199,000 crowns. The total output of the 11,493 factories of all kinds in the kingdom was valued at 4,197,991,000 crowns. In 1925, 292,714 men, 61,177 women, 28,119 boys and 9682 girls (under 18 years of age) were employed in factories.

COMMERCE. The foreign trade of Sweden during the first nine months of 1927 resulted in an export surplus of 24,000,000 crowns, exports totaling 1,150,700,000 crowns and imports 1,126,700,000 crowns. For the corresponding period of 1926, there was an import surplus of 84,000,000 crowns. In 1926 exports amounted to \$379,796,000 and imports to \$398,628,000, in U. S. money. Of the main export groups, "Lumber" showed the greatest value increase for the first nine months of 1927, as compared with the corresponding period of 1926, the totals being 211,246,000 crowns and 169,092,000 crowns, respectively. "Mineral raw materials" (iron ore) and "Animal foodstuffs" also registered marked increases of 38,027,000 crowns and 25,420,000 crowns, respectively. The workshop industries increased their exports by about 13,000,000 crowns. There were also to be recorded some outstanding changes on the import side, but the total increase in the value of the imports during the first nine months of 1927 over the same period of 1926 was only 56,300,000 crowns. Coal imports showed the largest increase, about 36,000,000 crowns. It should not be concluded, however, that the coal imports of 1927 were unusually high, as the previous year's imports were below normal on account of the English coal strike.

FINANCE. Sweden's proposed budget for 1927-28, published early in the year, balanced at 709,200,000 crowns; this represented a cut of 35,300,000 crowns from 1926-27. The outstanding feature was the absence of recourse to the treasury reserve. The cash account was to be utilized to the extent of about 30,000,000 crowns during the year. Direct State income was estimated at 537,900,000 crowns in the proposed budget, a considerable increase over the total of 516,000,000 crowns for the previous year. Furthermore, it was proposed that the tobacco tax, certain stamp taxes, and the tax on automobiles be increased. The following figures, in crowns, show the main sources of income in the 1927-28 budget as compared with the 1926-27 budget (figures for the latter in parentheses): Customs, automobile taxes, etc., 320,000,000 (305,000,000); income tax, 147,000,000 (142,000,000); and stamp taxes, 48,000,000 (45,000,000). A proposed doubling of the stamp tax on lottery tickets was estimated to return an increase of 3,000,000 crowns. The Swedish national debt at the end of March, 1927, totaled 1,749,264,000 crowns.

COMMUNICATIONS. On Jan. 1, 1926, the Swedish merchant marine numbered 2567 vessels of 1,417,340 gross tons. The vessels entering Swedish ports in 1925 numbered 29,018 of 13,408,671 tons; cleared, 28,929 of 13,377,044 tons. At the end of 1925 the total length of railways in Sweden was 15,981 kilometers, of which 6010 kilometers belonged to the State.

GOVERNMENT. Executive power is vested in the King, who acts through a responsible ministry known as the Council of State, at the head of which is the Minister of State or Premier; legislative power is in a diet of two chambers, of which the upper has 150 members elected by the legislatures of the provinces; the lower chamber consists of 230 members elected for four years by universal suffrage. The King in 1927 was Gustaf V, born June 16, 1858, who ascended the throne on the death of his father, Oscar II, Dec. 8, 1907. The ministry was constituted as follows: Premier, Carl Ekman; Foreign Affairs, E. Löfgren; Justice, J. Thyren; Defense, G. Rosen; Social Affairs, Y. Pettersson; Communications, C. Meurling; Finance, E. Lyberg; Education and Ecclesiastical Affairs, J. Almqvist; Agriculture, P. Hellstrom; Commerce, F. Hamrin; Ministers without portfolio, S. Ribbing and N. Gärde.

SWEDENBORGIANS. See NEW JERUSALEM, CHURCH OF THE.

SWEDISH LITERATURE. See SCANDINAVIAN LITERATURE.

SWIMMING. John Weissmuller of the Illinois A. C. of Chicago, and Miss Martha Norelius of the Women's Swimming Association of New York City, stood in a class by themselves in the swimming history of the United States in 1927.

The most noteworthy achievements of Weissmuller were his lowering of the world time for 220 yards from 2:15 1-5 to 2:09 in a 75-foot pool, and for 440 yards in a 110-foot pool from 4:59 4-5 to 4:52. Miss Norelius swam 500 yards in 6:32 in a 75-foot pool, bettering the former time by 3 2-5 seconds, and one mile in 25.13 2-5 over a 55-yard course, excelling the old record by 32 3-5 seconds. Clarence Crabbe was another record breaker of the year, cutting the American time for a mile to 2:52 2-5. George Kojac of the Boys' Club, New York City, who defeated Weissmuller in the 150-yard backstroke championship, set a new world's record of 2:36 for 220 yards. In breast-stroke swimming Walter Spence, of Brooklyn Y. M. C. A., and Miss Agnes Geraghty, of the Women's Swimming Association, were the two outstanding performers. Spence lowered the world's time for 100 meters to 1:14 in a 75-foot pool and the 300-meter mark to 4:14 3-5. Peter Desjardine of the Roman Pool, Miami, Fla., and Miss Helen Meany, of the Women's Swimming Association, led all rivals in springboard and high fancy diving. In the college aquatic world, Paul Samson of Michigan lowered the free-style times for the 220 and 440 yards to 2:17 2-5 and 5:09 4-5, respectively.

Long-distance swimming was marked by several notable feats in 1927. George Young, a 17-year-old Canadian, won the 22-mile swim across the Catalina Channel, California, and Edward Keating, of New York City, triumphed in a 23 1-2 mile race in Lake George, N. Y. A 21-mile contest in Lake Ontario resulted in

an easy victory for Ernest Vierkoetter of Germany.

The United States senior outdoor championships for men returned the following winners: 100 meters, John Weissmuller, 58 seconds; 440 yards, Weissmuller, 4 minutes, 42 seconds; 880 yards, Weissmuller, 10 minutes, 22 1-5 seconds; 1 mile, Clarence Crabbe, Outrigger Canoe Club, 22 minutes, 52 2-5 seconds; high diving, Peter Desjardine, Miami, Fla.; long distance swimming, Ray Ruddy, New York Athletic Club, 1 hour, 21 minutes, 5 2-5 seconds.

The winners in the senior women's outdoor championships were: 100 meters, Martha Norelius, Women's S. A., 1 minute, 13 4-5 seconds; 440 yards, Martha Norelius, 5 minutes, 57 1-5 seconds; 880 yards, Martha Norelius, 13 minutes, 17 4-5 seconds; mile, Martha Norelius, 25 minutes, 13 2-5 seconds; high diving, Helen Meany, Women's Swimming Association.

SWINE. See LIVESTOCK.

SWITZERLAND. A federated republic of western Europe, comprising within its limits ranges and peaks of the Alps and Jura Mountains. Capital, Berne.

AREA AND POPULATION. The area of Switzerland is 15,940 square miles; population, according to the census of 1920, 3,880,320; estimated Dec. 1, 1925, 3,936,330. In 1925 the estimated population of the principal cities was as follows: Zurich, 206,323; Basle, 137,500; Geneva, 126,350; Berne, 106,680. The movement of population in 1925 was: Births, 74,508; deaths, 49,849; marriages, 28,110; emigrants, 4334. Linguistic differences constitute the most important distinction among the various Swiss types. German is the language of 70.9 per cent of the people, French of 21.2 per cent, Italian of 6.2 per cent, and Romansch of 1.1 per cent. Dialects of the various languages spoken in Switzerland are numerous.

EDUCATION. In 1924-25 there were 4407 primary schools, with 16,738 teachers and 495,516 pupils; the 599 secondary schools had 27,321 boys and 26,258 girls, with 1832 men and 668 women teachers; 94 lower middle schools had 8542 boys and 4066 girls, with 591 men and 106 women teachers. For special education there were various commercial, technical, agricultural and other schools. The seven universities of Switzerland, at Basle, Zurich, Berne, Geneva, Lausanne, Fribourg and Neuchâtel, are organized on the model of those of Germany, governed by a rector and a senate, and divided into four faculties of theology, jurisprudence, philosophy and medicine. In 1925-26 the total number of students in attendance at these universities was 6662 and the members of the faculties numbered 962.

PRODUCTION. Of the total area, 2,317,243 acres are unproductive; of the productive area, 2,315,482 acres are forest, 3,025,000 acres are under grass, and 2,000,000 acres are pasturage. The principal crops are wheat, rye, oats, and potatoes. The chief agricultural industries are the making of cheese and condensed milk. Wine is produced in eight of the cantons, and tobacco in three. (For the estimates of the principal agricultural crops in 1927 see table of production by countries, in article AGRICULTURE.) The forest area belongs chiefly to the municipalities and is under Federal forest laws.

COMMERCE. Owing to the great dependence of Switzerland on foreign raw materials for its

industrial requirements, the visible trade balance of the country is regularly unfavorable. It is estimated that, but for its foreign markets, the country could support only one-half to two-thirds of its present population. Access to the important sales areas had become increasingly difficult for Swiss manufacturers during recent years. This development had been brought about chiefly by two factors, the raising of tariff walls in foreign countries and the continuing lack of favor shown by fashion to certain typical Swiss products, particularly embroidered goods and silk ribbons.

Foreign trade in 1925 as a whole (excluding precious metals) showed imports of 2,527,000,000 francs as against exports of 2,039,000,000 francs, or an adverse trade balance of 488,000,000 francs. The similar figures for trade in 1926 were 2,393,500,000 francs for imports and 1,836,500,000 francs for exports, or an adverse trade balance of 557,000,000 francs; this represents an increase of the unfavorable trade balance by about 69,000,000 francs. Exports in 1926 did not show a satisfactory development, since they were less than in the previous year by more than 200,000,000 francs; this was largely the effect of the new English and German tariff legislation.

Export trade for the first quarter of 1927 showed marked improvement over the similar period of 1926, reaching 465,000,000 francs as compared with 428,000,000 francs in the earlier period. From the tendency of the first three months of the year it was expected that the year 1927 would show a better export value than 1926.

FINANCE. The Swiss budget estimates for 1927 showed revenues of 309,493,000 francs and expenditures of 323,700,000 francs. The public debt on Jan. 1, 1925, exclusive of the railway debt, was 2,086,635,000 francs. The floating debt amounted on the same date to 168,485,000 francs. The total debt of the country was thus 4,855,288,000 francs.

COMMUNICATIONS. The results of operating the Swiss railways during 1926 fell far short of expectations, and the earnings, not only of the Federal Railways but also of the great majority of the private lines, showed a further setback as compared with 1925, and especially with 1924. In 1926 the gross revenues of the State Railways amounted to about \$15,000,000 and the expenditures to about \$10,000,000 leaving a gross surplus of \$5,000,000. The financial requirements of the Federal Railways in 1926, including service and amortization of their debt and war losses, exceeded this gross surplus by about \$500,000, representing a net loss, as compared with a net profit of about \$400,000 in 1925. This loss was attributable partly to a decrease of about \$800,000 in passenger traffic earnings and partly to another of \$2,800,000 in freight receipts, due to the application of lower rates to cope with motor transport. In 1926 the Federal Railways earned 2.6 per cent less than in 1925, the narrow-gauge lines 4.2 per cent less, the private standard gauge lines 2.7 per cent less, rack railways, 11.8 per cent less, and funicular railways 3.6 per cent less. The percentage deficit on all railways was 2.5 per cent.

GOVERNMENT. Both executive and legislative power are vested in a parliament of two chambers, the Council of State and the National

Council, the first having 44 members elected by the cantons, two for each canton; the second has 198 members elected directly by the people. The two chambers united form the Federal Assembly, which is the supreme organ of government and delegates the chief executive authority to the Federal Council, whose seven members are elected for three years. The seven members of the Federal Council act as ministers for the departments of the government. The chief magistrates are the President of the Confederation, and the Vice President of the Council, and are elected by the Federal Assembly for one year. President in 1927, Dr. Giuseppe Motta; Vice President of the Federal Council, Edmund Schulthess.

SYRACUSE UNIVERSITY. A non-sectarian, coeducational institution at Syracuse, N. Y., founded in 1870. The 1927 autumn enrollment was 5482, and the summer session enrollment 1445. The faculty numbered about 590 for the year 1926-27. The productive funds of the university amounted to \$3,444,908, and the income for the year to \$1,480,683. The library had 138,591 volumes and over 60,000 pamphlets.

In the spring of 1927, Syracuse University inaugurated a policy of surveying, with the aid of outside experts, the curricula and academic equipment of its various schools and departments. As a result of the study of a committee under the direction of Dean Pound of the Harvard Law School, Louis Marshall of New York, and a representative of the university, the law school, of which Paul Andrews was dean, was completely reorganized with the opening of the autumn session, and full-time teachers replaced the practicing lawyers who had been teaching on a part-time basis. A similar study of the library school, with the cooperation of the American Library Association, resulted in the appointment of Wharton Miller from Union College as director, and Edward S. Rowse, formerly director of the State Museum, as associate. At the November meeting of the Board of Trustees a teachers' pension system for all grades was adopted. Chancellor, Charles Wesley Flint, D.D., LL.D., Paed.D.

SYRIA. Traditionally, the region lying between the Syrian desert and the Euphrates River on the east and the Mediterranean on the west; and between the Taurus Mountains in the north and Egypt on the south; formerly a province of the Turkish Empire; in 1920 recognized as an independent state under a mandatory power, the mandate being bestowed upon France. Syria, under the mandate, is bounded by the Mediterranean on the west, by Palestine on the south, by Mesopotamia on the east, and by Turkey on the north. Since Jan. 1, 1925, the country comprises four territories. Syria, Alacuite, Great Lebanon, and Jebel Druze. The total area of the mandated region has been placed at 60,000 square miles, and the population at less than 3,000,000. Arabic is the prevailing language, the great majority of the inhabitants being of Arabic stock, and, in religion, Sunnite Mohammedan. The chief towns

are Damascus, 170,000; Aleppo, 140,000; Beirut, 80,000; Homs, 60,000; Hama, 35,000. There are about 500 French schools, with 50,000 pupils. Various educational schools are maintained by the Greek Catholics, the Maronites, the British missionary societies, and Roman Catholic agencies. There is an American university at Beirut.

PRODUCTION. Economic depression in Syria prevailed during 1926 but an improvement was noted toward the close of the year. Syria is essentially an agricultural country, and under the mandatory government efforts have been made to encourage the adoption of scientific methods of farming. Although the cultivable area of the country is estimated at about 12,500,000 acres, only about one-fifth of that total was actually under cultivation in 1926. Data on agricultural production for 1926 are incomplete, but estimates for the Damascus region indicated an improvement over 1925 in cereals, fruit, nuts and cotton. However, reports from the Beirut district showed less satisfactory results for cotton. Production of fresh cocoons during 1926 was estimated to have been slightly larger than during the preceding year when it totaled 2900 metric tons; raw wool was estimated at somewhat over 3000 metric tons, or about equal to 1925. The livestock industry around Damascus suffered considerably during the disturbances, and heavy losses were also sustained during the severe winter of 1925-26.

COMMERCE. Both imports and exports, including reexports, in 1926 showed a decrease in dollar value, as compared with 1925, while the adverse balance totaled \$23,403,000 as against \$24,617,000 in the previous year.

FINANCE. Preliminary results for 1926 indicated receipts of 8,494,000 Syrian pounds and expenditures of 6,670,000 pounds, a surplus of 1,824,000 pounds. The budget for 1927 fixed receipts and expenditures at 1,508,630 Syrian-Lebanese gold pounds (1 gold pound equals 20 gold francs).

COMMUNICATIONS. A total of 3160 vessels of an aggregate tonnage of 1,768,744 visited Syrian ports in 1926, as against 3182 vessels and 1,710,113 tons, for 1925.

There are two railroad systems in Syria, the Chemin de Fer Damas, Hama et Prolongements, and the Chemin de Fer Cilicie-Nord Syrie, known as the D. H. P. and C. N. S., respectively. The former operates the Hejaz Railway and the Tramways Libanais.

HISTORY. Desultory fighting between the Druses and the French occurred at the beginning of the year. The French High Commissioner refused to recognize the tribesmen as belligerents, and the tribesmen continued to demand an independent Syria which should be permitted to enter the League of Nations. By the summer the French had brought the revolt of the Druses and Syrian Nationalists to an end. The chief topic concerning Syria during the year was, When was France going to establish an organic law as provided for in the terms of the mandate? This was supposed to have been done by September, 1926, but the French government asked for and received an extension of time from the League of Nations. The year 1927 closed without anything definite being accomplished. To the observer it appeared from French acts, such as press censorship, interference with the constitution of Lebanon, and refusal to allot customs duties to the native

states, that Syria was not a mandated region but a possession, and as such was to be exploited in the usual imperialistic way.

TACNA-ARICA ARBITRATION. See ARBITRATION, INTERNATIONAL.

TAHITI. See OCEANIA, FRENCH ESTABLISHMENTS IN.

TAIWAN, t'wān'. Official Japanese name for Formosa (q.v.).

TALBOT, HENRY PAUL. American chemist and educator, died at Boston, Mass., June 18. He was born at Boston, May 15, 1864, and graduated at the Massachusetts Institute of Technology in 1885, becoming at once connected with the department of chemistry. He received the degree of Ph.D. at Leipzig, 1890. His entire professional career was spent in the department of chemistry of the Institute, of which he became head, and he was also chairman of the faculty, and after 1921 dean of students. During 1892-94 he lectured on chemistry at Wellesley College and in the World War he was a member of the Advisory Board of the U. S. Bureau of Mines for chemical research connected with gas defense. In 1921 the honorary degree of Sc.D. was conferred on him by Dartmouth College. In addition to writing numerous papers and articles on scientific topics he was the author of *An Introductory Course of Quantitative Chemical Analysis* (1897); (with A. A. Blanchard) *The Electrolytic Dissociation Theory* (1905); and *Bibliography of the Analytical Chemistry of Manganese* (1902).

TALC AND SOAPSTONE. The production of talc and soapstone in 1927 in the United States was estimated at practically the same amount as in 1926, when the output of talc was stated by the U. S. Bureau of Mines to be 181,568 short tons, valued at \$2,110,994. New York in 1926 was the largest producer, with 83,231 tons, valued at \$1,030,075, followed by Vermont with 53,510 tons, \$514,527, and California with 15,419 tons, \$233,292. In 1927 a new talc mine was under development at Gouverneur, N. Y., to start production in 1928, and in northern Idaho a deposit of soapstone and talc was being opened up in the Riggins district. In northern California, at the Ganim mine, a deposit of talc had been discovered for which a market had been found. After the United States, Canada, with 14,304 metric tons in 1926 and Austria, with 13,846 tons, were the leading producers of talc and soapstone in the world.

TANGANYIKA (tān'gān-yē'ká) **TERRITORY.** A territory under British mandate, comprising the portion of German East Africa assigned to Great Britain after the conquest of the country by British and Belgian soldiers during the World War. Area, about 365,000 square miles; native population (mainly of mixed Bantu race), according to the census of 1921, 4,107,000. The Europeans numbered 2447; Asiatics, 14,991, of whom about two-thirds were Indians. Capital, Dar-es-Salaam, with a population of 25,000. The capital and Tanga are the chief seaports. In 1925 there were 78 government schools, 1703 Roman Catholic schools, and 865 Protestant schools, with a total roll exceeding 160,814 pupils.

The total area under forest is approximately 2,700,000 acres, of which 2,170,000 acres are included in the government forest reserves. Ebony, gum copal and wild rubber are found. The

chief agricultural products are cereals, manioc, peas and beans, groundnuts, oil products, sweet potatoes and other vegetables, fruits (chiefly bananas) and coffee. Sisal and cotton production are also important industries. The output of cotton in 1925-26 was estimated at 8,000,000 pounds. A livestock census taken in 1925 showed 4,471,729 cattle and 4,332,686 sheep and goats. The principal minerals found are coal, gold, mica, graphite, iron and copper ores, cobalt and nickel. The total imports in 1925 were valued at £2,863,917; exports, £3,007,879; transit trade, £1,355,602. The imports for 1926 were valued at £3,607,000 and the exports at £3,904,000. The principal imports consisted of cotton piece goods, foodstuffs, building materials, iron and steel manufactures, machinery, kerosene and gasoline, cigarettes, and liquors. The principal exports were sisal, cotton, groundnuts, coffee, hides and skins, copra, grain, simsim, beeswax, ghee, and chilies. The revenues in 1926 amounted to £1,635,530 and the expenditures to £1,952,280. In 1925, 538 steamers (exclusive of coastal boats) of 918,923 tons, and 2269 dhows of 46,882 tons, entered and cleared from the various coast ports from places beyond the territory.

The head of the administration is a governor, who is aided by a nominated executive council. Governor of the territory in 1927, Sir D. C. Cameron.

TANGEITE. See MINERALOGY.

TASMANIA. A state of the Australian Commonwealth, consisting of the island of that name and several small islands. Area, including the island of Macquarie (170 square miles), 26,215 square miles; population, according to the census of 1921, 213,780; estimated on June 30, 1927, 210,529. The movement of population in 1925 was: Births, 5218; deaths, 1998; marriages, 1504. Capital, Hobart, with a population including suburbs (Mar. 31, 1925), 55,000. The population of Launceston, including suburbs, on the same date was 27,320.

The agricultural produce in 1924-25 was: Wheat, 231,388 bushels; oats, 1,065,933 bushels; peas, 353,815 bushels; potatoes, 83,377 tons; hay, 121,110 tons; fruits, 2,672,857 bushels; and hops, 2,224,500 pounds. The value of agricultural and pastoral products was £5,699,258, mining products, £1,396,909, and of manufactures, £4,174,891. The chief minerals in order of value were copper, tin, lead, silver, zinc, coal, gold, and osmiridium. The two chief sources of exports are fruit preserving and metal extraction. The total imports in 1924-25 were valued at £8,814,460; exports, £8,848,173. The principal exports are wool, minerals, timber, fruit, grain, potatoes, hops, bark, and hides and skins. The total registered shipping amounted to 182 vessels, of 14,532 tons. On June 30, 1925, Tasmania had 673 miles of railway that were opened to traffic.

The administration is under a governor, who acts through a responsible ministry, and the legislative power is vested in a parliament of two houses, the Legislative Council of 18 members, elected on the basis of property qualification, and the House of Assembly of 30 members, elected for three years by universal suffrage, including women, and with proportional representation. Governor in 1927, Sir James O'Grady; Prime Minister, Treasurer, and Minister for Mines, J. A. Lyons.

TAXATION. Discussion of the tax situation in the United States during 1927 was of chief interest from the Federal standpoint. It culminated during the latter part of the year in the consideration of the Federal income tax and of the estate tax situation by the Ways and Means Committee of the House of Representatives, while the year closed with a vigorous debate in the House on a tax reduction bill.

The year, however, also was of considerable importance from the standpoint of State legislation, and as usual this State legislation centered around income and inheritance tax provisions. However, there was no very material progress toward extended modification of the State systems and practically none toward the establishment of a basis of adjustment between them and the Federal government with regard to conflicting administration of income and inheritance tax provisions. Some progress was made in bettering the details of provisions of law and of administration, but what was done was of local interest chiefly. Toward the close of the year, however, the California legislature made provision for a general revision of the tax system of that State.

Internationally, the step of most interest was the presentation to the League of Nations of the report of the expert committee which had been appointed to study the question of double taxation and the best means of avoiding it in the case of individuals and enterprises living or operating in two or more nations.

STATE INCOME TAXES. Changes in State income taxes were found chiefly in Delaware, Missouri, New York, North Carolina, South Carolina, Oregon, and Wisconsin. In Delaware the action taken was chiefly a rectification of administrative provisions, while provision was made for payment of the tax in four equal annual installments, and the credit previously allowed to certain corporations for State taxes paid was withdrawn. In Indiana an amendment to the constitution providing for an income tax was passed by the General Assembly. In Missouri several important changes in methods of computation were made, and especially in the method of computing the net income of a resident of the State which made deduction for taxes assessed and levied by any other State, as income tax on property of non-residents was abolished. Stock dividends were also made taxable. In New York an amendment to the law authorized adjustments of income tax in favor of payers who are selling goods on the installment plan. In North Carolina the rate of the tax was increased from 4 per cent to 4½. In Oregon an act providing for a tax on income was submitted to the people at a special election in June, and was rejected. In South Carolina certain new exemptions and deductions were provided, while in Wisconsin the law itself was amended, and the tax was based upon average net incomes instead of on all income, while the rate remained the same.

STATE INHERITANCE TAXES. Changes in State inheritance taxes were made by California, which provided for reciprocity in subjecting to such taxes the intangible personal property of non-residents; by Georgia, which imposed the tax after the "Matthews flat-rate plan" on the property of non-resident decedents; by Illinois, which exempted intangible personal property of non-residents if they were residents of a State

granting like exemption; by Indiana, whose legislature adopted a concurrent resolution asking Congress to abolish the Federal estate tax; by Maine, Maryland, Massachusetts, and other States, which provided for reciprocity in the taxation of non-resident decedents after July 1, 1928; by New Jersey, which had greatly increased its rates in the higher brackets; by North Carolina, which had granted an 80 per cent credit as in the Federal tax; by North Dakota, which had repealed inheritance taxes and substituted an estate tax; by Oklahoma, which had imposed a tax on amounts over \$100,000, with graduated rates; and by Pennsylvania and Vermont, which had granted the 80 per cent credit in conjunction with the Federal government provision.

STATE CONSTITUTIONAL AMENDMENTS. State constitutional amendments were provided for by Idaho, which submitted to the people an amendment providing that all taxes shall be collected by the officer or officers designated by law; by Minnesota, providing for the crediting of two-thirds of the proceeds of the gasoline tax to the trunk highway fund and one-third to the State road and bridge fund; by North Carolina, permitting the classification of intangible personalty for purposes of taxation; by North Dakota, giving the State Board of Equalization power to assess the property of public-utility companies; by Oregon, providing for an income-tax amendment and omitting the amount of the State tax (rejected); by Texas, providing for the classification of property (rejected); special tax-investigating commissions were provided for in Arkansas (taxation and business); in California (general investigation); in Illinois (studying methods of assessment); in Maryland (studying general tax revision); in Massachusetts (revising the general tax laws); in Minnesota (studying specially the laws on intangible personalty); in New Hampshire (studying tax revision); in North Carolina, (making a comparative study of taxation); and in Texas (making a "tax survey").

SPECIAL TAXES. Insurance companies were subjected to special taxation in Alabama, North Carolina, Pennsylvania, Texas (through reassessment and revaluation), and Wyoming. Various states adopted new forms of taxation on intangibles, money and credit. Connecticut in 1927 provided for payment of taxes on bonds or mortgages by the owner of real estate instead of by the lender. Kansas raised the tax on money and credit from 2.5 mills per dollar to 5 mills, and made other minor changes. Nebraska revised its intangible tax law, so as to tax all money and capital competing with national banks, at the same rate as bank stock. New York removed the stock-transfer tax on shares or certificates of stock of any domestic concern, when the sale, the agreement to sell and the delivery are all made outside of the state. Oklahoma took intangible properties out of the general property class and subjected them to a special tax of $\frac{1}{2}$ of 1 per cent. Vermont added perpetual or redeemable leases and shares of incorporations or business trusts (except national banks, trust companies and savings banks, etc., organized under Vermont law) to the class of personal property, to be taxed at the rate of 40c. on \$1 of 1 per cent of appraised value.

MOTOR VEHICLE TAXES. In Alabama two sets of registration fees, one on motor trucks using

fuel on which excise tax had been paid, the other on trucks using fuel on which it had not been paid, were provided. California added three sections to its code designed to carry into effect constitutional provisions relative to excise taxes on motor vehicles. Connecticut taxed motor buses operated in connection with street railway lines in the same manner as the street railways. Georgia changed the basis of registration fees from horse power to weight. Maryland provided that no automobile can be licensed unless all other taxes on the automobile have been paid. Minnesota required public-service corporations paying gross-earning taxes to pay motor-vehicle taxes on cars or trucks using the public highways. Nevada imposed a special, but not an additional, license tax on all common carriers under the supervision of the Public Service Commission. New Jersey removed the general property tax on motor vehicles, and imposed an excise of $\frac{3}{4}$ c. per mile over New Jersey roads on common carriers engaged in interstate traffic. North Carolina increased the operator's license fee on common carriers from \$1 to \$5. North Dakota created a department of motor vehicle registration. Oregon required dealers in motor vehicles to be licensed and bonded; motor vehicles when used as common carriers must pay a license tax. Wyoming imposed an additional tax on common carriers over and above the tax that was imposed on other motor vehicles.

STATE RAILROAD TAXES. Maine changed its rate of railroad taxation to a basis of comparison of gross receipts with net. Maryland repealed the tax of 2 per cent on gross earnings of freight-line companies. Nebraska enacted a new law prescribing a new method for assessing railroad companies, such method to be determined by the Board of Equalization.

STATE TOBACCO TAXES. In Alabama a tax equal to 15 per cent of the whole price of cigars, cigarettes, etc., within the State was imposed. Kansas levied upon all cigarettes a stamp tax of 2c. on each 20 cigarettes or fraction, or 1c. on each 50 cigarette papers or fraction. License fees for selling were established at \$150 in large cities, \$50 elsewhere and \$300 on trains. Tennessee reenacted its tobacco tax of 1921, the proceeds to go to education.

FEDERAL TAX RECEIPTS. Federal tax receipts during the year (fiscal year) 1927 are restated under the head of Public Finance (q.v.), as a part of general treasury income. Aggregate totals showed increase in receipts from \$3,962,000,000 in 1926 to \$4,129,000,000 in 1927. Internal revenue collections, which include income taxes, tobacco and other miscellaneous internals, increased from \$2,837,000,000 to \$2,869,000,000, or \$31,774,000 over the preceding year, while receipts for customs and miscellaneous sources, including government-owned securities, Panama tolls, etc., were \$1,260,000,000, as compared with \$1,125,000,000 in 1926. Customs receipts increased from \$579,430,000 to \$605,500,000. The changes in the principal sources of receipts thus reviewed showed the general effect of the revenue act of 1926. The 1926 revision had changed the rates for different individuals subject to income tax, but through the increase in the income-tax rate on corporations it adjusted all income taxation so that corporations as a group pay an even larger proportion of the income taxes than formerly. The following table shows the

percentage distribution of income tax returned by corporations and by individuals in recent years:

	Corporation Per cent	Individual Per cent
1922.....	47	53
1923.....	59	41
1924.....	56	44
1925.....	61	39

The increased proportion of income taxes returned by corporations for 1925 reflects only part of the 1926 revision, inasmuch as the rate was set at 13 per cent for 1925 and 13½ per cent for subsequent years. Corporations were returning well over three-fifths of the income taxes. The revenue act of 1926 increased the personal credit exemptions for single persons 50 per cent and for married persons and heads of families 40 per cent. More than 44 per cent of individual taxpayers were relieved from income-tax payments, while reductions in the rate of normal tax were made from 2 per cent, 4 per cent and 6 per cent to 1½ per cent, 3 per cent and 5 per cent, respectively. Surtax rates were cut from a maximum of 40 per cent to a maximum of 20 per cent. These changes did not result in the expected loss of revenue; indeed, the individual income-tax returns for the last available year showed a larger tax than for the preceding year's returns before the tax cuts were adopted. This was due to a variety of causes; among them was the increased size of incomes due to general prosperity. For the calendar year 1925 (as reported by the Secretary of the Treasury at the end of 1927) 327,018 individuals, with a net income of \$10,000 or over, returned \$701,498,000, and 2,174,148 individuals returned \$33,000,000. Less than .3 of 1 per cent thus returned 95 per cent of the total income tax, about 1.9 per cent returned 4½ per cent and the remaining 97.8 per cent returned no tax whatever. The largest number of corporations making tax returns prior to 1925 was 417,421. For 1925, corporations to the number of 252,334 returned net income, and 177,138 returned no net income. The net income for 1925 was \$9,584,000,000, and the income tax was \$1,170,331,206.

CHANGES RECOMMENDED TO CONGRESS. The Secretary of the Treasury at the opening of Congress in December, 1927, recommended the adoption of important changes in taxation. In general, his suggestions could be classed under a few heads as follows: (1) Reduction in the rate of tax on corporate income from 13½ per cent to 12 per cent, a cut of about \$135,000,000; (2) change of corporate income-tax provisions so as to permit small corporations with net income of \$25,000 to pay taxes as partnerships, an estimated reduction of not over \$35,000,000; (3) readjustment of rates on intermediate incomes in intermediate brackets, a reduction of about \$50,000,000; (4) repeal of the state tax, a reduction of \$7,000,000, and (5) exemption from taxation for American bankers' acceptances held by foreign banks of issue.

These changes were taken under advisement by the Ways and Means Committee, and it was estimated that the aggregate reduction from them would not amount to more than \$225,000,000. Pressure from many interests ensued, and as a result additional exemptions were granted

by lessening the tax on automobiles, theatrical admissions, etc., so that the total revenue cut was raised to \$289,000,000. The House, however, refused to permit the elimination of the estate tax, and it also altered Secretary Mellon's recommendations as to the income tax on the intermediate brackets of income. Many other changes of detail were introduced; the bill as thus altered was adopted in the House of Representatives by a combined vote drawn from all party groups, and the bill was sent to the Senate. See also PUBLIC FINANCE.

TAXATION, MUNICIPAL, STATE CONTROL OF. See MUNICIPAL GOVERNMENT.

TELEGRAPHY. During 1927 a number of important developments occurred in the field of telegraphy, both on land and by submarine cable. Not only were facilities extended, but speed of operation was increased. On Mar. 4, 1927, direct cable service between the United States and Germany was formally reestablished, and messages were exchanged between President Hindenburg and President Coolidge. The Western Union Telegraph Company opened also a new direct cable to France, establishing instantaneous cable communication between New York and Paris, with no manual relays throughout the length of the line. This involved the diversion of one of the New York-Penzance cables to Le Havre, where the French government granted permission for the cable landing. The Penzance cable was cut off the coast of England and continued into Le Havre. This company during the year also established direct cable service between America and Belgium, with its own cable offices at Brussels and Antwerp.

On land the most significant feature of the year in telegraphy in the United States was the increased use of the simplex printing telegraph by the Western Union Telegraph Company, and its installation on many of its lines. At the end of the year over 600 simplex printers were used in various parts of the Western Union system, and it was anticipated that within the next four years the number would be increased to approximately 8000. It was estimated at the end of the year that more than 70 per cent of the 200,000,000 messages handled annually by the Western Union Company were transmitted and received automatically. Nevertheless, the old-time Morse operator was still required for a great many purposes, such as the transmission of news of great sporting events.

The increase in cable traffic was reflected in the statistics of the Western Union Company, for 1926, when a total volume of 87,372,278 words figured in the cablegrams handled by that company, as compared with 37,972,000 words transmitted in 1913.

ALL-AMERICA CABLES. At the end of the year the All-America Cables Company had in operation submarine cables to the length of 24,888 nautical miles, and land lines 2080 statute miles. The lines of this company in Central America during the year were extended by the following new cables: December, 1926, Fisherman's Point, Cuba, to Colon, Panama, 771.04 nautical miles; January, 1927, Chorrillos, Peru, to Iquique, Chile, 790.02 nautical miles; Iquique to Valparaiso, Chile, 947.57 nautical miles; February, Cartagena, Colombia, to Barranquilla, Colombia, 79.971 nautical miles; and May, Fisherman's Point, Cuba, to Port au Prince, Haiti, 189.862 nautical miles.

TELEPHONY. Estimates compiled just before the end of the year indicated that during 1927 there was a net increase of more than 750,000 in the number of telephones in service in the United States, bringing the total at the close of the year to approximately 18,500,000. Of these, over 2,850,000, or 15.4 per cent, were served from dial system central offices. Telephone wire in service in the United States amounted to more than 63,000,000 miles at the end of 1927, of which about 5,000,000 miles was placed in operation during the year. In January, 1927, a third transcontinental telephone line was formally opened. This line connects Minneapolis with Spokane, Seattle and Portland, supplementing the service already given over the first transcontinental line by way of Denver and San Francisco and the second transcontinental line via New Orleans, El Paso, and Los Angeles.

Progress was also made during the year in the construction of long-distance telephone cable lines which are practically storm-proof. A cable 649 miles in length was placed in service between New York, Albany, Buffalo, and Cleveland, which would ultimately provide for the simultaneous transmission of 250 telephone conversations and at least an equal number of telegrams. Cable construction was also pushed south of Washington, through Petersburg, Va., and elsewhere. Facilities for the transmission of pictures by wire were established during the year at Atlanta, Los Angeles, and St. Louis, thus extending the service which was previously available at Boston, New York, Cleveland, Chicago and San Francisco.

About \$250,000,000 was spent during 1927 by the telephone companies in adding to their facilities. At the close of the year, telephone plant and equipment in the United States represented a total investment of approximately \$3,500,000,000, and of this total about \$3,100,000,000 represented the investment of the Bell system in telephone plant and equipment. Further progress was made in facilitating the purchase of Bell Telephone securities by small investors, and there was an increase during the year of more than 20,000 in the number of stockholders of the American Telephone and Telegraph Company (the parent company of the Bell System). At the end of 1927 this company had over 420,000 stockholders, doubtless more than any other company in the world, with average holdings of only about 26 shares each. More than 73,000 of the company's stockholders are Bell System employees.

The number of persons employed in the telephone business in the United States increased by about 6000 during 1927, reaching a total of approximately 375,000 at the close of the year. In addition, about 50,000 are employed in the manufacture of telephone equipment and supplies. Telephone traffic showed further expansion during 1927, with an average of 72,500,000 telephone conversations daily in the United States, an increase of about 2,500,000 as compared with the daily average during 1926. The average number of telephone conversations per person for the year was about 205.8.

Notable progress was also made in extending the range of telephone communication. Early in the year telephone service was established between the United States and Great Britain, conversations being carried by telephone lines to radio transmitting stations at Rocky Point, L. I.,

and Rugby, England, whence they are sent out across the Atlantic, received at Cupar, Scotland, and Houlton, Me., respectively, and again carried by telephone lines to their destinations. Later, service was opened between Great Britain and certain points in Canada and Cuba, the conversations passing through the United States and following the route above described. In September, 1927, telephone service was established between the United States and a number of the principal cities in Mexico, including Mexico City and Tampico. This was accomplished by connecting the long-distance lines of the Bell System at the Mexican border with lines newly constructed by the Mexican Telephone and Telegraph Co., a subsidiary of the International Telephone and Telegraph Corporation.

In April, 1927, television, as developed by the Bell Telephone Laboratories, Inc., was publicly demonstrated. Not only the voice, but the moving likeness of a distant speaker was transmitted to an audience in New York by telephone lines from Washington, and later by telephone and radio from Whippany, N. J. After being successfully demonstrated the device went back to the laboratories for further experimentation and improvement. See also RADIO TELEGRAPHY AND TELEPHONY.

TELLURIUM. See CHEMISTRY, under *Biochemistry*.

TEMPLE UNIVERSITY. An institution of higher learning at Philadelphia, Pa., founded in 1884. The 1927 autumn term enrollment was 8727, distributed as follows: Liberal arts and sciences, 895; teachers college, 2854; elementary school, 99; commerce, 2685; theology, 53; law, 402; medicine, 212; pharmacy, 306; dentistry, 434; music, 171; chiropody, 37; university high school, 421; training school for nurses, 98. The summer school registration for 1927 was 1143. There were 527 members on the faculty. The income for the year totaled \$1,181,650. The library contained 41,606 volumes. President, Charles E. Beury, LL.D.

TENNESSEE. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,337,885. The estimated population on July 1, 1927, was 2,485,000. The capital is Nashville.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Corn	1927	2,944,000	70,656,000	\$58,644,000
	1926	3,099,000	85,222,000	56,247,000
Cotton	1927	943,000	845,000*	32,775,000
	1926	1,143,000	451,000*	22,550,000
Hay	1927	1,402,000	1,822,000*	27,114,000
	1926	1,452,000	1,828,000*	30,060,000
Tobacco	1927	91,000	71,435,000*	12,858,000
	1926	136,000	106,216,000*	11,153,000
Potatoes	1927	89,000	3,432,000	4,633,000
	1926	35,000	2,730,000	4,286,000
Sweet potatoes	1927	45,000	4,704,000	3,998,000
	1926	50,000	6,150,000	4,805,000
Wheat, winter	1927	528,000	3,696,000	5,187,000
	1926	440,000	7,920,000	10,771,000
Oats	1927	179,000	3,043,000	1,828,000
	1926	276,000	6,900,000	3,795,000

* bales, * tons, * pounds.

MINERAL PRODUCTION. Coal held its place in 1926 as the State's leading mineral product.

There were mined in that year 5,788,741 net tons of coal; in 1925, 5,454,011 tons. The product for 1926 was valued at \$10,077,000. Clay products, for 1925, attained a total value of \$3,941,395; for 1924, a value of \$4,933,152. The iron industry of the State was active in 1926; there were produced 113,029 long tons of iron ore, as against 95,186 tons in 1925; in value, \$2,544,825 in 1926 and \$2,014,176 in 1925. Coke produced in by-product ovens totaled 118,624 short tons in 1926; 88,879 short tons in 1925. Its value for 1926 was \$628,482; for 1925, it was \$471,059. There was also produced in 1925 beehive coke to the amount of 127,609 short tons, valued at \$690,041. Copper production in 1926 was 18,006,664 pounds; 19,788,234 pounds in 1925. Zinc production was 24,196,000 pounds in 1926; 32,152,000 pounds in 1925. Gold, silver and lead were also produced in minor quantities. The combined value of the production of these five metals in 1926 was \$4,621,151, and \$5,437,660 in 1925. Lime produced in the State and sold in 1926 totaled 183,000 (estimated) short tons; 175,085 tons in 1925. The value was \$1,352,000 for 1926 and \$1,344,508 for 1925. Of phosphate rock the State produced 464,240 long tons in 1925 and 388,697 tons in 1924; in value, \$2,334,995 in 1925 and \$1,976,188 in 1924. The total value of the State's mineral products, duplications eliminated, was \$38,869,198 in 1925, and \$35,354,525 in 1924.

FINANCE. As reported by the United States Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$14,309,409; their rate per capita was \$5.82. They included \$3,848,563 apportioned for education. Totals not included in the above, of \$776,833 in interest and \$10,251,639 in permanent improvement outlays, brought the aggregate of State expenditure to \$25,337,781. Of this, \$12,996,006 was for highways, \$3,722,485 being for maintenance and \$9,273,521 for construction.

Revenue receipts were \$25,115,672, or, per capita, \$10.22. Of their total, property and special taxes yielded 23.1 per cent, attaining a per capita rate of \$2.36. Earnings of departments and compensation paid the State for officials' services furnished 10 per cent of revenue; 43.9 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a gasoline sales tax. Net State indebtedness on June 30, 1926, was \$17,417,176, or \$7.09 per capita. Property subject to ad valorem taxation bore a valuation of \$1,693,048,022. State taxes levied thereon were \$4,232,620 or \$1.72 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 4,058.66. There were built in 1927, according to the annual statistics of the *Railway Age*, 2.86 miles of second track.

EDUCATION. The Legislature made an appropriation of \$1,000,000 to aid in the construction or repair of rural public school houses. The school population of the State in the scholastic year 1925-26 was reckoned at 658,695. There were enrolled in the public schools 625,644 pupils. Of these 447,915 were in the elementary schools and 177,729 in high schools. Expenditure for public school education totaled \$13,437,477. The salaries of teachers averaged \$770.40.

CHARITIES AND CORRECTIONS. Among the in-

stitutions for the custody or care of individuals in charge of the State were two State prisons, a girls' vocational school, three hospitals for the insane, schools for the deaf and dumb, and a home for Confederate veterans.

LEGISLATION. The legislature convened in regular biennial session January 3. In its acts it followed in part the recommendations of Governor Peay. The Governor's system of highway building from current revenue was abandoned, however, to the extent of authorizing bond issues to supplement revenue for this purpose. Bond issues were authorized to the amount of \$5,000,000 for State bridges, eight in number; \$4,500,000 for other bridges; \$2,500,000 for buildings for the University of Tennessee; \$10,000,000 for highway construction; \$1,000,000 for elementary school buildings; \$1,500,000 for purchase of lands in the Smoky Mountain area for park purposes. (See PARKS, NATIONAL.) A reorganization bill was enacted, making extensive changes in the organization of the State government and doing away with a number of its departments and bureaus.

There was passed a measure to assure to public school pupils throughout the State a minimum period of eight months' instruction yearly; and in order to furnish the revenue for the aid to rural schools that this involved, a tax was placed on sales of tobacco. An act rendered permanent the 10 per cent tobacco sales tax previously passed as a temporary measure by the 1925 Legislature. The Governor vetoed a so-called bonus measure, granting to every member of the legislature an extra allowance of \$750. His veto failed to prevent the enactment, by repassage, of this measure, and he brought suit as a taxpayer to prevent the payment. The price of gasoline was regulated by enactment. The legislature adjourned April 26. See WOMEN IN INDUSTRY.

POLITICAL AND OTHER EVENTS. The State Supreme Court rendered a decision January 15 in the Scopes case, in which John T. Scopes, a Dayton, Tenn., high-school teacher, had been convicted in 1925 under the law against the teaching of the theory of evolution. The Supreme Court voided the fine of \$100 against Scopes, on the ground that the sentencing judge had not possessed the power to impose a fine in excess of \$50, save if the amount were set by the jury. It was recommended that the State Attorney enter a nolle prosequi, "in the interest of the peace and dignity of the State," and the prosecution was accordingly abandoned. The court, by majority opinion, declared the anti-evolution statute itself constitutionally sound. Governor Austin Peay, inaugurated in January into his third term, died suddenly October 2. Henry H. Horton, Speaker of the State Senate, succeeded him, being inaugurated on the following day. An enactment to regulate the price of gasoline was fought in the Federal courts by three large oil companies which sought an injunction against it immediately after the law went into effect April 8.

OFFICERS. Governor, Henry H. Horton; Treasurer, John F. Nolan; Comptroller, Edgar Graham; Secretary of State, Ernest Haston; Auditor, O. S. Shannon; Attorney-General, L. D. Smith; Commissioner of Education, P. L. Har-
ned.

JUDICIARY. Supreme Court: Grafton Green, Chief Justice; Associate Justices, A. W. Cham-

bliss, Colin P. McKinney, Frank P. Hall, William L. Cook.

TENNESSEE, UNIVERSITY OF. A non-sectarian coeducational institution of higher education at Knoxville, Tenn., with colleges of medicine and dentistry and a school of pharmacy at Memphis, and a junior college at Martin; founded in 1794. The autumn enrollment for 1927 was as follows: Knoxville departments, 2090; Memphis departments, 635; Martin Junior College, 120; total, 2845. There were 308 members on the faculty. The land grant amounted to \$400,000 and the income for the year 1926-27 was over \$2,000,000. The library contained 85,364 volumes. President, Harcourt A. Morgan, LL.D.

TENNIS. The seven-year reign of the United States in the lawn tennis world came to an end in 1927 and France assumed the leadership in a game which probably has a larger following in every land than any other, with the possible exception of golf. J. René Lacoste, Henri Cochet, Jean Borotra and Jacques Brugnon comprised the French team which captured the Davis Cup, emblematic of world supremacy in tennis. Further to emphasize the complete overthrow of the United States, Lacoste captured the national outdoor singles, Borotra won the indoor singles crown, and Borotra and Brugnon carried off the indoor doubles honors. Miss Helen Wills of California alone prevented the tennis season from being an utter rout for United States players. Miss Wills won the Wimbledon championship and then regained the United States title which she had been forced by illness to relinquish the previous year. There was yet another consolation for America in the recapture from England of the Wightman Cup, for which teams of women compete.

Twenty-five nations challenged for the Davis Cup, 21 in the European zone and four in the American. France captured the European zone finals and Japan was victorious in the American series. In the interzone final, France made a clean sweep of the matches with Japan, winning five straight and thus becoming the challenging nation. The results of the interzone final follow:

J. René Lacoste, France, defeated T. Harada, Japan, 6-1, 6-1, 6-2; Henri Cochet, France, defeated Y. Ohta, Japan, 6-0, 6-3, 6-2; Jacques Brugnon and Cochet, France, defeated Harada and T. Toba, Japan, 9-7, 6-1, 6-2. The remaining two matches were defaulted by Japan.

The results of the matches in the challenge round follow:

J. René Lacoste, France, defeated W. M. Johnston, United States, 6-3, 6-3, 6-2; W. T. Tilden, United States, defeated Henri Cochet, France, 6-4, 2-6, 6-2, 8-6; Cochet defeated Johnston, 6-4, 4-6, 6-2, 6-4; Lacoste defeated Tilden, 6-3, 4-6, 6-3, 6-2; Tilden and F. T. Hunter defeated Jean Borotra and Jacques Brugnon, 3-6, 6-3, 6-3, 4-6, 6-0. Final score: France 3, United States 2.

The holders of the various United States championship titles at the close of 1927 were: Singles, J. René Lacoste; doubles, W. T. Tilden and F. T. Hunter; women's singles, Miss Helen Wills; doubles, Mrs. L. A. Godfree and Miss E. Harvey; clay court singles, W. T. Tilden; clay court doubles, John Hennessey and Lucien Williams; indoor singles, Jean Borotra; doubles, Borotra and Jacques Brugnon; intercollegiate singles, Wilmer Allison, University of Texas; doubles, John Van Ryn and Kenneth Appel, Princeton.

The Wimbledon, England, men's singles were won by Henri Cochet of France, and the doubles by W. T. Tilden and F. T. Hunter of the United States. The Wimbledon women's singles were captured by Miss Helen Wills of the United States and the doubles by Miss Wills and Miss Elizabeth Ryan of the United States.

TETANUS. In Germany, despite the swing to republican ideas, the law appears to be very absolute in fixing responsibility for deaths from lockjaw. According to a forensic case narrated in the *Münchener Medizinische Wochenschrift* for August 12, upon a death from this cause the government prosecutor at once proceeds to inquire into the possibility of neglect in some quarter, medical or insurance. In the case of a boy of 15 who pricked his foot in climbing a barbed-wire fence, dying in a few days of tetanus, it was found that preventive antitoxin had not been used, as the wound was slight and not at all suspicious. A university professor of surgery testified that he would have made use of the antitoxin in such a case, and that in all likelihood it would have saved the boy's life. The attending physician and an accident insurance company were jointly adjudged culpable of neglect, and by arrangement out of court the two responsible parties agreed to pay a certain sum in damages. The physician apparently has no choice in the matter, for, since lockjaw often follows trifling and clean wounds, it is held that all of those victims who succumb to the disease might have been saved by a slight effort. The beliefs and judgments of the medical man go for naught, and, although in the small clean wound the chance of lockjaw is remote, this chance shall not be taken.

TEXAS. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 4,663,228. The estimated population on July 1, 1927, was 5,397,000. The capital is Austin.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops, in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Cotton	1927	16,270,000	4,280,000*	\$413,020,000
	1926	15,374,000	5,028,000*	808,912,000
Corn	1927	5,159,000	119,847,000	77,678,000
	1926	3,844,000	108,863,000	64,118,000
Wheat, winter	1927	1,850,000	17,945,000	21,713,000
	1926	1,802,000	32,796,000	39,355,000
Grain sorghums	1927	2,654,000	55,734,000	36,227,000
	1926	2,854,000	71,350,000	39,242,000
Hay	1927	1,024,000	1,282,000*	13,968,000
	1926	1,086,000	1,392,000*	16,150,000
Potatoes	1927	35,000	2,310,000	3,812,000
	1926	30,000	2,100,000	4,200,000
Sweet potatoes	1927	133,000	11,970,000	8,978,000
	1926	92,000	8,556,000	8,128,000
Oats	1927	2,003,000	42,063,000	19,770,000
	1926	1,964,000	38,666,000	31,793,000
Rice	1927	161,000	6,279,000	5,400,000
	1926	166,000	6,142,000	6,756,000
Barley	1927	195,000	8,120,000	2,184,000
	1926	174,000	6,090,000	3,228,000

* bales, † tons.

MINERAL PRODUCTION. Third in rank among the States in production of petroleum, Texas notably increased its output in 1926, the total produced in the year being 163,933,000 barrels (estimated) as against 144,648,000 barrels in 1925; in value, \$292,800,000 for 1926 and \$262,270,000 for 1925. Production of natural gas

was 134,872,000 M cubic feet in 1925, the latest year of available statistics, and in 1924 was 107,247,000 M cubic feet; in value, \$19,715,000 for 1925 and \$13,748,000 for 1924. From natural gas in 1926 were extracted 232,200,000 (estimated) gallons of gasoline; 214,092,000 in 1925. This product had a total value for 1926 of \$21,900,000; for 1925, of \$22,606,000. Much the greater part of the sulphur mined in the United States (1,890,027 long tons in 1926 for the entire country) came from Texas. The cement production of the State in 1926 was 5,007,374 barrels; 4,858,212 in 1925. The shipments were valued at \$9,522,701 for 1926 and for 1925 at \$8,729,046. Clay products for 1925 amounted to \$6,298,045; for 1924, to \$5,469,908. Coal mined in 1925 was 1,008,375 tons. Coal produced in 1926 had a total value of \$1,751,000; in 1925, of \$1,566,000. Gypsum, sand and gravel and stone were important products. The total value of the mineral production of the State in 1925, duplications eliminated, was \$361,211,629; in 1924, \$272,729,023.

Metal mines in Texas in 1927 produced 400 ounces of gold, 1,000,000 ounces of silver, and 500,000 pounds of lead, according to the U. S. Bureau of Mines. The greater part of the production came from the Presidio mine at Shafter, Presidio County. This mine had been a consistent producer since 1885. The total production of Texas from 1885 to 1927, inclusive, mostly from this mine, was 18,987,000 ounces.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending Aug. 31, 1927, were \$52,700,659; their rate per capita was \$0.98. They included \$22,541,673 apportioned for education. Totals not included in the above, of \$215,154 in interest and of \$13,527,461 in permanent improvement outlays, brought the aggregate of State expenditure to \$66,443,274. Of this, \$19,384,671 was for highways, \$8,070,436 for maintenance and \$11,314,235 for construction.

Revenue receipts were \$72,106,131, or per capita, \$13.66. Of their total, property and special taxes yielded 40.6 per cent, attaining a per capita rate of \$5.54. Earnings of departments and compensation paid the State for officials' services furnished 5 per cent of revenue; 34.3 per cent was derived from sale of licenses, chiefly on incorporated companies and motor vehicles, and from a gasoline sales tax.

Net State indebtedness Aug. 31, 1926, was \$4,412,566, or \$0.84 per capita. Property subject to ad valorem taxation bore a valuation of \$3,674,414,327. State taxes levied were \$23,883,692, or \$4.52 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State Jan. 1, 1927, was 16,266.47. There were built in 1927, as reported by the *Railway Age* 93.18 miles of first and 74.43 miles of second track.

EDUCATION. A rate of \$15 per capita for all children between seven and 17 years was established by enactment, to govern the apportionment of grants from the school fund. Appropriations for the ensuing two years at the rate of \$1,500,000 a year were made for the aid of school districts having fewer than 400 pupils each, this being designed to provide a six-months term. The minimum levy for school tax, according to State Superintendent S. M. N. Marrs,

in the *Journal* of the National Education Association, was set at 7½ mills. State appropriation of \$100,000 was made to pay high-school tuition elsewhere for students in districts having no high schools. County boards of education were authorized to borrow where necessary in order to pay teachers' salaries without delay. A constitutional amendment was submitted that would provide longer terms for school officials.

CHARITIES AND CORRECTIONS. The central agency in State welfare work, as organized in 1927, was the State Board of Control. It consisted of three members, one appointed every second year for a six-year term. This body exercised control over 17 State institutions. These, with the numbers of their inmates, were as follows: Austin State Hospital, 1991; San Antonio State Hospital, 2160; Terrell State Hospital, 1874; Rusk State Hospital, 989; Wichita Falls State Hospital, 926; Abilene State Hospital (for epileptics), 756; Tuberculosis Sanatorium, 439; Juvenile Training School, Gatesville, 877; Girls' Training School, Gainesville, 173; Home for Dependent and Neglected Children, Waco, 139; State Orphan Home, Corsicana, 559; School for the Deaf, Austin, 508 pupils; School for the Blind, Austin, 229; School for Deaf and Blind (colored), Austin, 200; Confederate Men's Home, Austin, 338; Confederate Women's Home, Austin, 95. An institution for the feeble-minded, the Austin State School, with 604 inmates, was also under the Board's supervision. The inmates of the State prison and reformatory institutions Jan. 1, 1927, numbered 3225, according to the statistics of the Department of Commerce, and the number of those admitted to these institutions in 1926 was 1979.

LEGISLATION. The legislature convened in regular biennial session in January and adjourned March 16. There were offered 1140 bills and 66 joint resolutions, and about 300 bills, and eight joint resolutions, were passed. Both appropriations and revenue were heavily increased. For the benefit of State highway construction, the sales tax on motor gasoline was raised to 3c. a gallon, from 1c., with the provision that after a year the rate should fall to 2c. A constitutional amendment to increase the power of the legislature with regard to taxation, and so enable it to reshape the tax system, was voted, for submission to the electorate. It was proposed that the legislature should be authorized to provide for State needs by special taxation, and should leave the direct tax to the counties. Another amendment submitted to the people was designed to enable the legislature to abolish the fee remuneration for county officers and to substitute salaries; this amendment was inspired in part by the United States Supreme Court decision declaring the fee remuneration of certain quasi-judicial officials in Ohio unconstitutional, and in part by charges that officials had abused the fee system in Texas.

Further constitutional amendment proposals were voted, to provide a State Supreme Court of nine members; permitting the legislature to set the salaries of all State officials, provided that the salary of the Governor should not exceed \$10,000 a year, with allowance for actual traveling expenses; and providing ten-year terms for school trustees and for regents of the higher educational institutions. The right was granted

by statute to counties to use their own discretion in the choice and purchase of school textbooks, using in the purchase the money provided by the existing State allotment. A notable change in the criminal code was the elimination of the crime of manslaughter, with the intent that all voluntary homicides should be punished as murder.

The amnesty granted to ex-Governor James E. Ferguson by the session of 1925 was repealed. The Federal Sheppard-Towner Maternity act was accepted, in regard to the fulfillment of the provisions rendering its benefits applicable to the State. A libel law was enacted which rendered the actions taken at political meetings, and school board and other meetings of public interest, privileged matter in regard to newspaper reports. Cities received power to pass ordinances limiting the height of buildings and their proximity to the street. Motor buses were placed under the control of the Railroad Commission.

A special session of the legislature convened May 9. It was rendered necessary, primarily by the failure of the regular session to pass important appropriation measures. It provided \$9,577,792 for the support of the State eleemosynary institutions in the ensuing biennium, and \$11,000,000 in a departmental appropriation bill, and dealt also with highway and supplemental school aid and prison and civil service legislation.

POLITICAL AND OTHER EVENTS. Gov. Miriam A. Ferguson ended her term January 18, granting some 143 pardons or paroles on its last day, and Dan Moody was inaugurated Governor. The prosecution of peonage cases in Willacy County led to convictions and prison sentences upon a sheriff and four other defendants, March 12. Houston added some 10,000 to its population April 27, when the City Council passed an ordinance annexing Park Place, Kensington and several other communities. Negotiations were carried on for the merging of the City of Harrisburg with Houston.

OFFICERS. Governor, Dan Moody; Lieutenant-Governor, Barry Miller; Secretary of State (appointive); Treasurer, W. Gregory Hatcher; Comptroller, S. H. Terrell; Attorney-General, Claud Pollard.

JUDICIARY. Supreme Court: Chief Justice, C. M. Cuerton; Associate Justices, T. B. Greenwood, William Pierson.

TEXAS, UNIVERSITY OF. A State institution of higher education at Austin, with a medical branch at Galveston and a college of mines at El Paso. The main university opened in 1853. For the autumn term of 1927 the enrollment totaled 5885, and for the summer session, 3275. There were 429 members on the faculty, an increase of 24 over 1926. The endowment resources of the institution amounted to \$17,515,000, and the income from legislative appropriation, fees and income from endowment was estimated at \$2,682,399. The library contained 388,016 volumes. President, Harry Yandell Benedict, Ph.D., LL.D.

TEXTILE INDUSTRY. The American textile industry in 1927, according to a summary made by the *Textile World* (New York) experienced a year of ups and downs. From a state of depression at the beginning of the year there was a general recovery extending through August, which, as regards the total volume of textile manufactures, involved an estimated in-

crease of about 12 per cent. In August and October there was a decline which, however, was checked in November and December, when there were indications of improvement. Wholesale dry-goods sales in 1927 were estimated at 4 or 5 per cent below the 1926 level, while department store sales averaged about 2 per cent lower than in the previous year. The wool-manufacturing industry was relatively stable during the year, averaging about the same as in 1926, though at no time did the activity fall to so low a point as had been recorded in that period. The operating margins of the various wool manufactures declined during the year. Cotton manufactures made progress between January and October, when there were clear indications of over-production, with a resulting slump. The mill consumption of cotton showed an increase during the first part of the year, notwithstanding the increased prices of raw cotton. In the early autumn a turn in the situation came, with a general curtailment both of purchase and production. There was also a decline in the silk industry; it was more decided as regards the total value than the quantity produced, which did not show any marked decrease. A reduction in spindle activity was noted, but the broad loom production held fairly steady. Imports of raw silk increased during the year, and the supplies available at the end of 1927 were in excess of the requirements. There was a decline in the value of silk textile production which, of course, was an indication of over-production.

NEW MILL CONSTRUCTION. As will appear by the accompanying table showing new construction for ten years, taken from the annual summary compiled by the *Textile World* (New York), new mill construction in the United States for 1927 was practically the same as in the previous year, and it marked the lowest point since 1897. There were fewer new enterprises in cotton and silk manufacturing than in 1926, but there was an increase in knitting and miscellaneous fields over the previous year. Of the 23 new cotton mills built during the year 13 were in the South, five being in North Carolina, three in South Carolina, two in Georgia and Arkansas, and one in Texas. In 1927, five new cotton mills were built in Pennsylvania.

Among the new wool mills, ten in number, Rhode Island led with three, followed by Massachusetts and Pennsylvania with two each; while Georgia, West Virginia, and Canada each had one. Seventy new knitting mills were constructed during 1927, of which 23 were located in North Carolina and the same number in Pennsylvania. New Jersey had five new knitting mills. Most of these enterprises were plants for the production of full-fashioned goods.

There were only 19 new silk mills reported for 1927, as against 37 in 1926. Pennsylvania was credited with seven, New Jersey with six, North Carolina with five, and Massachusetts with one.

Five new rayon plants were reported during the year, three in New Jersey, one in North Carolina, and one in Tennessee. Of the 4 new mills reported under the head "Miscellaneous," 28 were dyeing, bleaching and finishing plants, six were fibre mills, five mattress plants, four braid and odd-fabric mills, and two linen and jute mills.

The tendency of Northern cotton mills to establish branches in the South continued in 1927, though to a less extent than in previous years. Nine additional Northern mills established Southern branches, seven of these going from New England, one from New Jersey, and one from New York. These mills totaled somewhat less than 100,000 spindles and 2000 looms. There was also manifested a tendency to move to the South the machinery of Northern mills in the processes of liquidation, and there were also a number of new enterprises, some of which were to be equipped with machinery from Northern mills. Since 1921 approximately 80 cotton mills in New England, New York and New Jersey had gone out of business and liquidated, or were in process of liquidating their plants. In some of these the machinery had been scrapped or sold in small units to other mills. At the end of the year it was estimated that there were about 1,000,000 spindles idle in Northern mills that probably would not start again, and there were about 700,000 spindles moved South by Northern plants in the previous six years which were operating under the existing management, and probably about 300,000 spindles taken from Northern plants by Southern mills. It was further stated that when these spindles were set up in the South they were usually operated day and night and thus became equivalent to 2,000,000 spindles. In the North it was estimated that there had been a decline of 2,800,000 spindles since 1921, when the movement to the South first began, so that the decrease in the spindleage in Northern mills due to transfer and scrapping was estimated at 14 per cent.

The United States Census Bureau reported 36,336,512 spindles in place in November, 1927, of which 18,155,218 were in Northern states and 18,381,294 in the cotton-growing states. In 1921, out of a total of 36,047,000 spindles, 20,338,379 were in the North, but at no time since 1921 had more than 34,500,000 (in 1923) been in operation, and usually not over 33,000,000. An estimate of the real spindleage in the North was given as about 17,520,000, though the census reported 18,155,218 spindles in place in Northern mills.

The total value of textile exports from the United States in 1927 was \$1,022,466,848, as compared with \$1,010,268,843 in 1926 and was less than in 1925, when a total of \$1,278,370,472 was reached. Of the 1927 exports, manufactures of cotton amounted to \$109,065,845, as compared with \$109,817,444 in 1926. The total value of wool manufactures exported in 1927 was \$3,977,135, as compared with \$3,954,187 in 1926. The manufactures of silk exported were \$15,297,829 in value, as compared with \$17,788,377 in the previous year. Manufactures of rayon exported in 1927 totaled in value \$7,377,562, as compared with \$7,680,524 in 1926. Exports of miscellaneous textile products in

1927 had a value of \$22,549,894, as compared with \$22,258,389 in 1926.

The imports of textiles in 1927 totaled \$954,128,393, as compared with \$999,672,336 in 1926. This included unmanufactured raw materials. The manufactures imported were as follows: Cotton, 1927, value, \$60,798,384; in 1926, value, \$60,697,159; wool, in 1927, value \$64,195,766; in 1926, value \$59,194,465; silk, 1927, value \$42,157,958; in 1926, value \$40,569,818; artificial silk or rayon, 1927, value \$18,091,301; in 1926, value \$13,898,990. See COTTON; RAYON; SILK; WOOL.

THEATRE. The theatrical year of 1927 in the United States found itself gazing back upon an exciting and interesting half year as January dissolved memories of the pre-Christmas slump and the holiday rush, while the half year ahead came into view. *An American Tragedy* and *Gentlemen Prefer Blondes* had been announced with enthusiasm by their producers, and had been, inevitably, disappointing. *The Captive* had caused its little furor and was being "investigated," and *Broadway* was setting ticket price records among the speculators. The half year and the year to come were not to be counted great in the annals of the theatre, but theatrical prosperity continued, and the plays that scored successes were to have a long continued financial reward.

Prosperity in the theatre evidences itself in length of runs for successful plays rather than in multiplication of successes, which is quite logical, after all. The best "shows" are, nineteen times out of twenty, the best plays. Genius and sincerity in drama, once given adequate production, are recognized by the patronizing public, irrespective of what may draw the crowd for a while.

New York in 1927 was, as usual, the theatrical heart of the United States; every play of any consequence or success reaches that market ultimately. To this reviewer, it seems today the centre of the international theatre as well. Certainly, the Theatre Guild started to prove the case by beginning the dramatic year on January 3 with a splendid dramatization of Dostoevsky's *The Brothers Karamazov*—the Jacques Copeau and Jean Croue version, translated from the French—giving the matter two lingual removes from its native tongue.

Everyone in this drama of failure, infatuation and emotional stress is a little mad. It seems incredible that anyone without a previous acquaintance with the novel should know what it was all about; but delineation of character and creation of mood, gave Dudley Digges and Edward G. Robinson abundant scope for fine portrayal, while Alfred Lunt and Lynne Fontanne vibrated in unfamiliar accents. It had but a moderate popular appeal. Beautifully staged and directed by Copeau, it was up to the high Guild standards of production. *Tommy*, a not unusual but pleasantly senti-

"IN ABRAHAM'S BOSOM," THE PULITZER PRIZE PLAY OF 1927
BY PAUL GREEN; PRODUCED BY THE PROVINCETOWN PLAYERS, NEW YORK CITY

mental comedy, did what such comedies invariably do—scored a comfortable success running well into the year. Then Mrs. Fiske gave a short revival of *Ghosts*, and did Ibsen in modern clothes and the Fiske manner.

Kenyon Nicholson wrote a play of circus side show life that opened as *The Barker*, after various other names had been proposed; *Ballyhoo*—which opened ten days earlier and closed almost at once—had preempted the first choice of titles. *The Barker* was excellent, if theatrical, entertainment, ably pieced together of patiently recorded fictions in the popular mind with regard to side-show life.

The Cradle Song, from the Spanish of the Sierras, was the first of Eva Le Gallienne's Civic Repertory openings. It had a quiet popular appeal and became part of the permanent repertoire of that theatre. The sentimental treatment of convent life is effective.

Saturday's Children, Maxwell Anderson's best individual play, opened for a successful run late in January. Saturday's children, born to labor, are a young business couple who experience a much more plausible "first year" than Frank Craven pictured a few years ago. Ruth Gordon carried the star rôle and proved that she is not only a comedienne but an actress of emotional appeal. This play came close to receiving the Pulitzer prize, and was another argument against prizes, committees and solemn judgments. However, *Saturday's Children's* story of the young couple's struggle to find a solution of the economic problems presented by life on \$40 a week, and the "companionate marriage" philosophy in the background, pleased New York's fancy and did very well indeed.

Trelawny of the Wells, Arthur Wing Pinero's romance of the theatre in the eighties—with little enough of the theatre in it—was revived by George Tyler. It has always been a favorite vehicle for all-star casts, and has been used by the Players Club. John Drew (q.v.), polished and distinguished actor of the man-of-the-world rôles of other days, played Sir William Gower. It was well received and ran for 56 performances in New York. In the cast were such names as Peggy Whiffen, Pauline Lord, Henrietta Crossman, Wilton Lackaye, Otto Kruger, O. P. Heggie and others almost as well known. On tour the play had better success, and it was while in California with the company that John Drew, of the theatre to the end, played his last scene in the drama of life. Peggy Wood's little book gives a splendid account of John Drew and his last tour.

Jane Cowl opened in *The Road to Rome*, a dubiously historical romance by R. E. Sherwood. A delicately handled, although rather heavily satirical play, giving an excellent background for Miss Cowl's charm, it was one of the successes of the season.

The Little Theatre Tournament now become an annual event, opened on May 2, conducted by Walter Hartwig. From North and South and West came competent Little Theatre groups, evidence of the strength of a movement which is a more positive guarantee of theatrical vitality than even Broadway. From England came the Welwyn Garden Theatre Society. The long trip was evidence of enthusiasm and confidence—and it was justified by the winning of the Belasco trophy. Their production was *Mr. Sampson*, by Charles Lee. Other awards went to the Knigwa

Players, Little Negro Theatre of Harlem, New York City; the Brookside Open-Air Theatre, Mount Kisco, N. Y.; and a group from the Memphis Little Theatre of Memphis, Tenn.

A revival of *Kempy*, the opening of the annual (and in this case regrettably final) *Grand Street Follies*, and the Players' production of *Julius Caesar* were all that were at all notable in the dozen or more plays on the boards as the season passed on into the summer siesta.

The annual Players' production is an event in New York. The most distinguished American actors' organization, it includes on its roster almost every name important in the current theatre of the United States, and its history is celebrated and honorable. John Drew was president until his death. Walter Hampden succeeded him in a post which is by custom held for a lifetime. The annual productions are limited by the very abundance of talent available. Plays with a multitude of good parts are not frequent in this day of high salaries, star parts and long runs. Naturally, call is made upon Shakespeare, Sheridan and the nineteenth century dramatists.

In *Abraham's Bosom*, a play produced quietly at the Provincetown Playhouse on Dec. 30, 1926, and scarcely noticed at the time the 1926 YEAR BOOK went to press, was to win the Pulitzer award. The Provincetown Players and Paul Green filled the exact specifications of the Pulitzer bequest far more completely than did *They Knew What They Wanted*, two years ago, for example.

This study of negro life in eastern North Carolina is honest and vital. It had little popular success—in fact, it was withdrawn before the Pulitzer award, then reopened and played to better business. Stirring, thoughtful, intense, it is the saga of the negro Abe, his hopeless aspirations for his race, his titanic struggles against conditions, his defeat and death. *Porgy*, or later production, another fine play of negro life, lacks the social motif implicit in *In Abraham's Bosom*. Naturalistic dialogue is no better anywhere than in these two plays.

In September the more interesting half of the year began. The seeds of inspiration flung off by *Broadway*, which was still going prosperously enough as the year ended, were developing in the rich soil of the box office demand. And the "hard-boiled" year of the theatre began. Certainly, the American theatre was becoming no place for weak nerves and ailing hearts. Gangsters and gun play, murder and low intrigue in which even the audience must play an unprotesting part—as in *The Spider* and *The Trial of Mary Dugan*—made hair rise on end and caused undue wear and tear on theatre upholstery.

"Hard-boiled," a typically American phrase, describes it all. On September 19, began *The Trial of Mary Dugan*. The lady continued on trial until the end of the year, and murder was investigated nightly at the National Theatre. *The Racket*, a tough slice of Chicago and the newspaper world, was another *Broadway* suggestion, with only one woman in the cast by way of variation. *Nightstick* and *Interference* were concerned with crime up to and including murder.

Next to gangster warfare, the most popular subject of the second half-year was theatrical life seen back-stage and off-stage. Again, the

influence of *Broadway* was suspected. *Burlesque* furnished color and troubled love in the burlesque world here presented—and perhaps burlesqued. In *The Shamons of Broadway* James Gleason and his mother gave an appealing and theatrical comedy of vaudeville people, and late in the year *The Royal Family*, of which Edna Ferber was co-author with George Abbott, gave further pathetic consideration of the lives that live only in and for the theatre.

One turned back mentally to *Six Characters in Search of an Author*, to *He Who Gets Slapped*, to *The Torchbearers*, for material in contrast with this passion for introspection by Broadway. Certainly, it was topical material, but naturally it had limitations in exploitation in the same vein.

Katherine Cornell found a good part in *The Letter*, a tawdry melodrama of murder and passion, by Somerset Maugham, and shortly took it on the road. Although an unimpressive play, it gave Miss Cornell an opportunity to show us once more that she was one of the most important actresses of the day.

To this reviewer the four real successes and the four most interesting plays of the fall of 1927 were Galsworthy's *Escape*, Ann Bridgers' and George Abbott's *Coquette*, the Heywards' *Porgy* and Philip Barry's *Paris Bound*.

Galsworthy announced *Escape* as his last play. It is thoroughly typical. The audience considers a problem in social attitudes, presented impartially and in detail. As usual, no solution is offered or implied. A fine young fellow is jailed for the accidental killing of a policeman. He escapes from the prison farm. We see him in half a dozen scenes as a fugitive; we desire him to escape. We see him come from hiding and give himself up to save a clergyman from the need of making a direct falsehood. There is no "love interest." Leslie Howard gave an unusual and sensitive performance in the part of the fugitive. It was a quiet and intelligent presentation, representatively Galsworthy, but without the force of *Justice* or even of *The Silver Bow* and with, as usual, the audience as an aider and abettor of technical criminals.

Ann Bridgers, a Southern girl, gave—with some final aid from George Abbott—in *Coquette* what was perhaps the best play of the year. Helen Hayes and Elliot Cabot move superbly from high comedy to heart-wrenching tragedy in this story of a little Southern coquette and her lover.

The South dominated the serious theatre in 1927. Perhaps it is the most vital with the older American tradition to which our playwrights almost instinctively turn for material. But Du Bose and Dorothy Heyward's *Porgy* is more than Southern. It is a study of the South Carolina negro, product of the rice fields and the wharves. *Porgy*, a crippled darky beggar, lives in Catfish Row. With his life and environment and the high poetry of simple, emotional dialect, the Guild created a colorful and important theatrical presentation from what at first blush does not seem overly dramatic material. It bears the unmistakable stamp of authenticity.

Philip Barry's most successful play, far more successful than his serious and beautiful *John* of an earlier time in the year, or the whimsical *White Wings*, or even that lyrically lovely play

In A Garden, was *Paris Bound*. An amusing and intelligent discussion of the possibly comparative unimportance of matrimonial infidelity, it was a highly civilized and polished piece of writing, performed with a finish that made it one of the notable theatrical events of the year.

After brief mention of these four there is but little left to chronicle. A most gallant revival of *The Taming of The Shrew* used modern dress, and such modern contraptions as firearms and an automobile. It was surprisingly amusing, and even more surprisingly successful, with Basil Rathbone and Mary Ellis as Petruchio and Katharine.

Walter Hampden turned to Ibsen and did, again, *An Enemy of the People*. He has created his own public, and to it even this not too important Ibsenism appealed. Dr. Stockman is a good Hampden vehicle, and the actor's choice of the play was natural. On the whole, it had a distinctly cordial welcome, another tribute to Mr. Hampden's ability.

Foreign invasions were few. Max Reinhardt's beautiful production, in German, of *A Midsummer Night's Dream*, and *Danton's Tod*, especially, were remarked. The Argentine players, headed by Camille Queroga, appeared in repertoire at that favorite home of the wanderers, the Manhattan Opera House.

So much for the more serious theatre. In musical comedy—and what has been called musical tragedy—there was unusual prosperity for some. The hits of the year were *Hit The Deck*, *Rio Rita*, *The Five o'Clock Girl*, *Good News*, *Funny Face* and *Show Boat*. Gilbert and Sullivan were again presented by Winthrop Ames in *Iolanthe*, *The Mikado* and *The Pirates of Penzance*.

See *Drama* under FRENCH LITERATURE; GERMAN LITERATURE; SCANDINAVIAN LITERATURE, and SPANISH LITERATURE. Also LITERATURE, ENGLISH and AMERICAN.

THEOSOPHICAL SOCIETY, AMERICAN. The American division of the Theosophical Society, a world-wide organization founded in 1875 by Mme. Helena P. Blavatsky and Col. Henry S. Olcott. World headquarters were later established at Adyar, India, near Madras. In 1927 branches existed in forty-two nations, on five continents. In North America and the Antilles there are five national divisions of the international Theosophical Society, each taking its designation from the region in which it exists, the Canadian, Mexican, Cuban, Porto Rican and that of the United States, formerly known as the American Section of the Theosophical Society. The American Theosophical Society had 254 local lodges throughout the nation in 1927.

The objects of the Society are: To form a nucleus of the universal brotherhood of humanity, without distinction of race, creed, sex, caste, or color; to encourage the study of comparative religion, philosophy and science; to investigate the unexplained laws of nature and the powers latent in man. It is composed of students, who are united by their approval of the society, by their wish to remove antagonisms due to religion and to draw together men of good will whatsoever their religious opinions, and by their desire to study religious truths and to share the results of their studies with others. The headquarters were moved to Wheaton,

Ill., in 1927. The President of the Society for the year was L. W. Rogers.

THEOSOPHY. The Theosophical movement was founded in New York City in 1875, by Mme. Helena P. Blavatsky, whose teachings, given out under the name of Theosophy, were not new, but were a restatement of part of the unchanging body of truth which underlies all religions. The fundamental propositions of Theosophy are: (1) The existence of a boundless, immutable principle, inconceivable by the finite mind, which is the causeless cause of all existence; (2) the universal operation of the law of action and reaction, evidenced by the eternal succession of periods of manifestation and dissolution of universes, as by sleeping and waking, life and death, of man; and (3) the fundamental unity of all souls, and the gradual perfecting of every soul by self-effort through many lives, each individual having the circumstances, opportunities and character he has himself earned. The objects for which the Society was founded were the formation of a nucleus of universal brotherhood, the study of ancient and modern religions, philosophies and sciences, and the investigation of the unexplained laws of nature and the powers latent in man.

During 1927, Theosophy Hall, a large and dignified structure, was built at Los Angeles, Cal., and dedicated to the cause of Theosophy and the service of man. The movement for the return to the teachings of Theosophy as presented by Madame Blavatsky, as distinguished from the many departures therefrom, has spread steadily. Considerable activity in this direction has been evident, particularly in Holland, where an independent group of Amsterdam Theosophists disseminated *A Call for Studying the Original Theosophy*. William Q. Judge's *An Epitome of Theosophy* was translated from English into French during 1927, as was also *Letters That Have Helped Me*. The first volume of Charles Johnson's translation of *The Great Upanishads* was issued, and a complete vindication of Madame H. P. Blavatsky (in the form of a critical analysis, by William Kingsland, of the 1885 Report of the Society for Psychical Research on the phenomena connected with her) was published in England under the title, *Was She a Charlatan?*

In 1927, also, a reprint of the original edition of Madame Blavatsky's *The Voice of the Silence* was published in Peking, under the auspices of the Chinese Buddhist Research Society, with the indorsement of the Tashi Lama of Tibet.

THEREMIN, ERNEST. See **PHYSICS**.

THOMPSON, HENRY DALLAS. American educator, died at Santa Barbara, Cal., August 30. He was born at Metuchen, N. J., Aug. 24, 1864, graduated at Princeton in 1885, and became a fellow in mathematics. He studied at Johns Hopkins in 1886-87, and obtained a Ph.D. from Göttingen in 1892. He was a member of the Princeton faculty since 1888, and was made a professor in 1894. He was a member of the New Jersey Assembly, 1906-08. During travels in 1915-16 and in 1921-22 he studied governmental and educational methods in India, New Zealand, Australia, China, Japan, and the Philippine Islands. He was the author of the following: (With Henry Burchard Fine) *Translation of Euclid* (1890); *Elementary Solid Geometry and Mensuration* (1896); (with H. B.

Fine) *Coordinate Geometry* (1907; new edit., 1909).

THOMPSON, WILLIAM GILMAN. American physician and educator, died at New York, October 27. He was born at New York, Dec. 25, 1856, and was graduated from Sheffield Scientific School, Yale, in 1877 and from the College of Physicians and Surgeons, Columbia University, in 1881. Later he studied in London and Berlin. From 1887 to 1898 he held chairs at the New York University Medical College, and from 1898 until 1916 he was professor of medicine at Cornell University Medical College, retiring with the title of professor emeritus. He was chairman of the Industrial Hygiene Division of the New York State Labor Department, being especially interested in obtaining compensation for industrial workers poisoned by chemical substances. He edited *The American System of Medicine* (1897), and frequently contributed articles to medical or other scientific journals, while he wrote, among other works: *A Text-Book of Practical Medicine* (1902); *Practical Dietetics* (1909); *Occupational Diseases* (1915).

THOMPSON, WILLIAM HALE, Mayor of Chicago. See **ILLINOIS**, under *Political and Other Events*.

THOMSEN, VILHELM LUDVIG PETER. Danish philologist, died May 13 at Copenhagen, Denmark. He was born in Copenhagen in 1842 and became professor of comparative philology at the university there in 1887. He traveled extensively in Asia and Europe, and his works, which deal with Lycian, Etruscan and runic inscriptions, include: *The Relations Between Ancient Russia and Scandinavia and the Origin of the Russian State* (1877, German translation, 1879), a series of lectures delivered at Oxford.

THURIN'GIA. A federated state of the German republic, created at the end of 1919; comprising the following states of the former German Empire: Eisenach, Gotha, Reuss, Saxe-Altenburg, Saxe-Meiningen and Saxe-Weimar, with Schwartzburg-Rudolstadt and Schwartzburg-Sondershausen. Area, 4536 square miles; population, according to the census of 1925, 1,609,300. Capital, Weimar, with a population in 1925, of 45,957. Other large towns with their populations at that date were, Gera, 81,402; Jena, 52,649; Gotha, 45,780; Eisenach, 43,385. The arable land is estimated at 44 per cent of the total area. The acreage and production of the principal crops in 1925 were: Wheat, 148,276 acres, 119,422 tons; rye, 182,009 acres, 131,619 tons; oats, 203,324 acres, 126,772 tons; potatoes, 160,518 acres, 887,118 tons. The government is under a diet, which acts through a state council. In the elections held in January, 1927, the following parties were returned: Conservative bloc, 19; Socialists, 18; Communists, 8; other parties, 6. The executive authority is intrusted to the president of the state council; president in 1927, Dr. Leutheusser.

TIBET, ti-bét' or tibet. A region extending eastwards from the Pamirs to the border of China; between the Himalaya and Kwenlun Mountains; nominally under the suzerainty of China. Area, estimated at 463,200 square miles; population, variously given, at 1,500,000 to 6,000,000, the probable figure being about 2,000,000. Capital, Lhasa, with a population of 15,000 to 20,000. Lamaism is the prevailing religion. The chief pursuits are pastoral, and the animals raised include sheep, yak, buffaloes,

pigs and camels. Some agriculture is carried on, the products including barley and other cereals, pulse, and vegetables. There are considerable industries of wool spinning, weaving and knitting. Of the minerals, gold, borax and salt are mined to some extent. Trade is chiefly with India and China.

TIMBER. See **FORESTRY**.

TIME, ESTIMATES OF. See **GEOLOGY**.

TIN. In 1927 there was an estimated increase in the output of tin over the year 1926. There was, however, a decline in price during the year, although the average was stated to be higher than in any normal year previous to 1926. As usual, the Federated Malay States were the chief producers, and the production for ten months of 1927 was stated at 42,557 long tons, or an increase of 4477 tons over 1926. Banka, with 12,999 long tons for the same period, showed a slight decrease, but there was an increase in the Dutch ores sent to the Straits Settlements, which amounted to 15,998 tons, and Siamese, Indian and South African ores amounted to 8782 long tons. Bolivia for the same ten months had a production of 27,112 long tons, or an increase of 2806 over 1926, while Nigeria had a production of 6467 tons, or an increase of 760 over the corresponding months of 1926.

The United States continued to acquire a constantly increasing percentage of the world's output. The world's production in 1925-1926, as computed by the U. S. Bureau of Mines, is given in the accompanying table.

WORLD'S PRODUCTION OF TIN BY COUNTRIES,
IN LONG TONS*
[Tin content of ore]

Country	1925	1926 (estimated)
Australia	8,016	8,000
Belgian Congo ^b	1,226	1,500
Bolivia ^c	32,224	38,862
China ^b	8,884	6,538
England (Cornwall)	2,839	2,064
India (British)	1,616	1,296
Indo-China	582	(4)
Malay States:		
Federated ^b	45,926	45,948
Unfederated ^b	2,146	2,220 ^c
Netherlands East Indies	31,566	32,697
Nigeria	5,991	7,042
Portugal	559	(4)
Siam ^c	7,878	8,000 ^c
Union of South Africa	1,147	1,124
Other countries ^f	1,000	1,000
Total	146,100	147,300

* Compiled by L. M. Jones, of the U. S. Bureau of Mines.

^b Exports.

^c Estimated.

^d Estimate included in total.

^e Exports for year ended March 31 of year following that stated.

^f Includes countries producing less than 500 tons.

During 1926 the only tin produced in the United States was mined in Alaska, and amounted to 7.14 long tons of recoverable tin in concentrates, valued at \$10,400, as compared with 12.3 tons in 1925.

In 1927 the United States imported tin in the form of bars, blocks, pigs, etc., to the amount of 159,357,110 pounds valued at \$100,865,205, as compared with 172,836,188 pounds valued at \$104,793,390 in 1926. As in previous years, British Malaya supplied the chief amount, 101,011,226 pounds; followed by the United Kingdom, with 31,276,507; the Netherlands, with 17,371,939; Hongkong, with 4,415,495; Australia,

with 1,490,600, Netherlands East Indies, with 587,171; and other countries with 3,195,172.

TIBOL. See **TYROL**.

TITCHENER, EDWARD BRADFORD. American psychologist and educator, died suddenly at Ithaca, New York, August 3. He was born at Chichester, England, in 1867, and was educated at Malvern College, England, and Brasenose College, Oxford, where he received a B.A. in 1890. He studied with Wundt at Leipzig, where he took his Ph.D., and in 1892 went to the United States to take charge of the new psychological laboratory at Cornell University, as assistant professor of psychology. In 1895 he was made professor, and he remained at this post during his entire career, becoming research professor in 1910. Not only did he bring the Cornell laboratory of experimental psychology to a point of great efficiency, but he devoted himself single-heartedly to the advancement of psychological science along the lines where he conceived advancement to lie. He came with two main preoccupations, which he appeared to have borrowed from Wundt—the preoccupation to make psychology an experimental science, and the preoccupation for a scientific metaphysics on the basis of psychology. With these preoccupations, he brought scholarship and rigorous sincerity, and he stuck to his programme long after Wundt, his master, had gone over to such non-experimental work as the study of the cultural psychology of peoples.

In his systematic outlook Titchener started with the postulate of psycho-physical parallelism. Instead of seeking to explain away consciousness in terms of physiology, he postulated a correspondence between the mental and the physical or physiological series. The physical series of events was to be studied by experimental apparatus, and the mental series was to be studied by controlled introspection. In this way, it was hoped, experimental psychology would escape the Scylla of the subjective faculty psychology and the Charybdis of materialistic mechanism. In practice, the programme of structural psychology—as the doctrine of Titchener came to be called—sinned in both directions; at least, in the minds of its critics. Whatever results were accomplished by the Titchenerian programme lay in the further exploration of physiological sensitivity.

On the mental side, the school never got beyond the analysis of consciousness into sensations. In the attempt to analyze the sensation further, the concept of attribute or dimension was developed, and thus a sensation was measured according to the attributes of extensivity, duration, clearness, quality, and intensity. But this whole notion of attributes was abandoned in the end when it was realized that the observed attributes were not "existential" but were the result of subsequent judgments about antecedent experience. In short, as far as the basic programme of making psychology an exact experimental science was concerned, the Titchener school never proceeded beyond the obvious fact that we have sensations and that these sensations are presumed to come from the external world.

Professor Titchener made numerous original investigations in the fields of sensation, affective process, attention and action. He received honorary degrees from Harvard, Clark and Wis-

consin. He wrote: *An Outline of Psychology*, 1896; *A Primer of Psychology*, 1898; *Experimental Psychology*, 1901-05; *Elementary Psychology of Feeling and Attention*, 1908; *Experimental Psychology of the Thought-Processes*, 1909; *Textbook of Psychology*, 1910; *A Beginner's Psychology*, 1915; *Systematic Psychology*, 1924.

TOBACCO. Production of tobacco in 1927 in the United States was estimated at 1,237,832,000 pounds, a reduction of about 60,000,000 pounds from 1926. Increase in the bright, flue-cured tobacco districts of the Eastern seaboard was more than offset by heavy reductions in the air-cured and fire-cured tobacco districts of the Mississippi Valley and Virginia, and less important reductions in some of the cigar districts. The average price per pound in 1927 showed an increase of 3.2 cents over 1926, representing an increase in the total farm value of this crop of approximately \$30,000,000. The total value of the 1927 crop was estimated at \$266,356,000. The chief producers were: North Carolina, 468,000,000 pounds; Kentucky, 242,820,000; Virginia, 129,940,000; South Carolina, 75,920,000; Tennessee, 71,435,000; Georgia, 59,088,000; Pennsylvania, 44,880,000; Wisconsin, 31,620,000; Connecticut, 28,886,000; Maryland, 26,176,000, and Ohio, 24,012,000.

The United States produces one-third of the world's output of tobacco, but accounts for 45 per cent of the total world export. The latter is limited to a few countries, such large producing areas as India, China and Japan consuming practically their entire crop locally and importing some tobacco in addition. There has been a tendency to substitute foreign tobaccos for the American product in a number of European countries, notably Italy and Poland, while Great Britain has been importing more tobacco from her colonies. These developments help to explain sharp reductions in the black tobacco belt of Kentucky and Tennessee. (See also U. S. Dept. of Agriculture, *Official Record*, Apr. 13, 1927, page 7.)

Tobacco is rapidly assuming an important place in Canada's export trade. The 1927 export of 6,330,972 pounds was 30 per cent greater than that of 1921. Great Britain absorbed 99 per cent of the 1927 export, valued at \$2,669,300.

Receipts from tobacco taxes of various kinds in the United States during the fiscal year 1926, as reported by the Commissioner of Internal Revenue, again showed a large increase and were the greatest in the history of the United States Internal Revenue Service. These collections included taxes on tobacco, snuff, cigars and cigarettes of domestic or imported manufacture, and domestic and imported cigarette papers and tubes. The total receipts for 1927 were \$376,170,205.04. No prior year's collections approached this figure, which represented an increase of \$5,503,766.17 over the preceding year. This is the more surprising from the fact that the reduction in rates of taxes on cigars under the revenue act of 1926 accounted for a decrease of \$14,774,061.58 in collections from taxes on large cigars and a decrease of \$180,084.19 from taxes on small cigars, and, furthermore, that the repeal of tobacco special taxes accounted for a decrease of \$1,132,155.97, and that the revenue from chewing and smoking tobacco declined \$2,640,578.04. The increase in the taxes collected resulted from the unparalleled receipts

on small cigarettes, amounting to \$278,928,561.81, which was an increase of \$24,103,753.62 compared with the preceding year. This tax on cigarettes represented 74.15 per cent of the total tobacco collections.

The collections in North Carolina were more than three times those in any other State, amounting to \$185,941,504.24. For State tobacco taxes, see **TAXATION**.

TOBAGO. A West Indian island, included administratively in Trinidad (q.v.).

TODDITE. See **MINERALOGY**.

TOGO, tō'gō or **TOGOLAND.** A former German protectorate in West Africa; after the War, divided between Great Britain and France; situated between Dahomey and the Gold Coast. Total area, 33,700 square miles; total population estimated at 762,208, of whom 245 were Europeans. Hamitic tribes make up the population of the north, while in the south the chief stock is the Ewe. To France has been allotted about two-thirds of the total area; namely, 21,200 square miles, including all the coast. The British part bordering the Gold Coast has an area of 12,600 square miles, with a population, according to the census of 1921, of 183,265. The soil is generally fertile and the forests are extensive; the mineral resources are rich but undeveloped. Iron is reported to be especially abundant. Statistics for exports, imports, revenue, and expenditure are now included in the general totals of the Gold Coast. The governor of the Gold Coast is the administrator of the territory.

In French Togo, the natives engage in agriculture and some manufacturing. The chief agricultural products are corn, yams, plantains, peanuts, etc. The forest products are of some value, but the chief trade is in palm oil, palm kernels, cacao, copra, cotton, and rubber. The native industries include weaving, straw-plaiting, wood-cutting, pottery, etc. In certain districts the natives engage in iron smelting. In 1925 the imports were valued at 76,323,503 francs; exports, 61,576,782 francs. The budget for 1926 balanced at 23,887,200 francs. From Lome, the seat of the government, there are railway connections with Anecho, Palime and Atakpame, with a total length of 204 miles. In 1925, 333 vessels cleared from the two ports of Lome and Anecho.

TOLEDO, UNIVERSITY OF THE CITY OF. An institution of higher education at Toledo, Ohio, founded in 1872. The enrollment for the autumn of 1927 totaled 1633, including 825 day students and 808 late afternoon and evening students. There were 244 students registered for the summer session. The faculty had 74 members. The annual budget of the university amounted to \$249,000, and the library contained about 21,000 volumes. Dr. Henry John Doermann was chosen president and entered on his duties Dec. 1, 1927.

TONGA or **FRIENDLY ISLANDS.** Three groups of islands, together with small, outlying islands, to the east of Fiji in the Pacific Ocean, between 15° and 23° 30' S. latitude and 173° and 177° W. longitude; since May 19, 1900, a protectorate of Great Britain. Total area, approximately 385 square miles; population, according to the census of 1921, 23,750 Tongans; 370 other Pacific islanders; 571 Europeans; and 235 half-castes. The natives are Christians, about 16,000 belonging to the Free Church of Tonga. At the end of 1924 there were 105 public pri-

mary schools, with 4600 pupils enrolled. Tonga College had eight teachers and 161 students at the end of 1924. Native produce consists almost entirely of copra. Revenue in 1924-25, £74,345; expenditure £63,585. In 1925 the imports were £258,322 and the exports £280,386. The government is under the High Commissioner of the Western Pacific, who acts by the advice of the local ruler and native chiefs. Queen in 1927, Salote, who succeeded Apr. 12, 1918; high commissioner for the Western Pacific, Sir Cecil Hunter Rodwell.

TONGKING, tŏn'kĕn. A French protectorate, constituting the northern chief division of the colony of French Indo-China, south of the Chinese provinces of Kwangsi and Yunnan. Area, 40,530 square miles; population in 1926, 7,369,745, of whom 9143 were Europeans, exclusive of military forces. The chief city is Hanoi, which is the capital of French Indo-China, with a population of 103,235 in 1926. The chief crop is rice, although there is also a large annual production of raw silk. The mineral resources include limestone quarries, calamine and tin mines, as well as rich anthracite coal beds. Among the principal imports are metal tools and machinery, yarns, and cotton. The chief exports are rice, corn and animal products. Imports in 1924, 492,003,265 francs; exports, 372,153,000 francs. The local budget for 1926 balanced at 16,950,000 piastres. In 1924, 1019 vessels of 1,338,213 tons entered and cleared from the port of Haiphong. The government is under a resident superior, who in turn is under the governor-general of French Indo-China.

TORNADO. See **MISSOURI**, under *Political and Other Events*.

TORNADO INSURANCE. See **INSURANCE**.

TORONTO, UNIVERSITY OF. An institution of higher education at Toronto, Canada, supported by the provincial government, and founded in 1827. The 1927 autumn enrollment was 5456, distributed as follows: arts, 2907; medicine, 755; applied science and engineering, 545; household science, 134; Ontario College of Education, 199; forestry, 60; music, 27; graduate students, 368; dentistry, 284; social service, 99; public health nursing, 98; university extension (occupational therapy), 40. In 1926-27 the faculty had 659 members. The total expenditure for the year 1926-27 for salaries and maintenance was \$2,453,945. The library contained 220,349 volumes and 76,876 pamphlets. Among the gifts received during the year were subscriptions for the Banting Research Foundation, \$157,700, and other smaller contributions which brought the total gifts received to \$235,123. President, Sir Robert A. Falconer, K.C.M.G., D.D., LL.D.

TOWN PLANNING. See **CITY PLANNING**.

TRACHOMA. In 1925 Herbert Work, Secretary of Interior of the United States, requested the American Medical Association to appoint a committee of ophthalmologists from that organization to investigate the spread of trachoma among the Indians of Oklahoma and other Southwestern States. A partial report was made by Dr. W. C. Posey in the *Journal of the American Medical Association* for May 21. A trachoma hospital school was established at Fort Defiance, Ariz., and if it proved successful others doubtless would follow throughout the Indian region. The

high incidence of trachoma may be imagined when it is borne in mind that 25 per cent of the Navajo and Pueblo tribes are affected, the population of the Navajos alone being over 35,000. Most of the adults present the disease in its final or cicatricial stage, and the problem must be restricted to the treatment and prevention of the disease in the school children, since the school attendance makes it possible to acquire wholesale control. Naturally, the attendance is compulsory, and the children attend large boarding schools throughout the area. After the children leave school anything like wholesale control is impossible.

TRADE FAIRS. See **EXPOSITIONS**.

TRADE-UNIONS. **PAN-AMERICAN LABOR CONGRESS**. The fifth Pan-American Labor Congress met at Washington, July 18-23, there being present delegates representing organized labor from the following countries: Colombia, Cuba, the Dominican Republic, Guatemala, Mexico, Nicaragua, Panama, Peru, Porto Rico, Salvador, the United States, and Venezuela. The executive council's report recited the following achievements: The appointment of a joint Mexican and American labor commission to investigate the emigration of Mexican unskilled labor to the United States, and attempts to remedy working conditions in Cuba, Nicaragua, and Venezuela. The Congress passed the following resolutions of a general economic nature: Condemnation of the exploitation of labor recruited in one country for work in another; approval of the creation of government labor departments in the Latin-American countries; plea for appointment of labor attachés to embassies; a call for the exchange of labor information through the Pan American Union; the appointment of a commission to study a minimum wage; and the urging upon foreign corporations to use domestic labor where they had obtained concessions, etc. Various other resolutions were passed with specific reference to particular countries. Those applying to the Dominican Republic indicated the backward conditions still existing.

The resolutions called for an eight-hour day for workers in government activities; abolition of payment by scrip paper in sugar factories; enactment of a workmen's compensation act; establishment of free public hospitals; enactment of more equitable land laws in order to free "the great mass of citizens from serfdom to large landowners." The following officers were reelected: William Green, president; Luis N. Morones, vice president; Santiago Iglesias, secretary; Matthew Woll, treasurer.

INTERNATIONAL FEDERATION OF TRADE-UNIONS. When this body met again after the War, it represented a membership of 23,170,000 trade unionists; at its 1927 congress in Paris, August 1-4, there was a reported membership of 13,445,553, of which only 268,309 were drawn from countries outside of Europe (Palestine, Argentina, Canada, South Africa). The trade-unionists of Great Britain and Germany made up almost 9,000,000 of the total. At the Paris congress the following matters were transacted: It was decided to move headquarters from Amsterdam to some other country; there was to be only one general secretary instead of the former three. A. A. Purcell, the former president, was defeated for reelection, despite the insistence of

the British delegation, and in his stead was chosen another Englishman, George Hicks, president of the British Trades-Union Congress. These resolutions were adopted: A demand for the ratification of the eight-hour day convention, a call for a continuous peace propaganda on the part of trade-unionists, and a resolution pointing out the need for a universal language. The defeat of Purcell indicated that the so-called "Amsterdam International" was still hostile to Russia. It could not be said that the history of the congress of 1927 held out many hopes for its rejuvenation.

BRITISH TRADES-UNION CONGRESS. The fifty-ninth annual meeting of the British Trades-Union Congress was held in Edinburgh, September 5-10. The delegates represented 170 organizations and 4,103,994 members, a decrease of 201,625 from 1926. The congress attacked bitterly the passage of the trades dispute and trade-union act, demanding for itself "the full right of combination by all workers and the application of the strike to be used as and when and in what manner may be found necessary." It also rejected industrial unionism as against the present method by crafts. Russia, as before, loomed large in the proceedings of the Congress. President Hicks expressed great resentment of Moscow's policy of calumny of English trade-unionism. The congress decided that "no useful purpose will be served by continuing negotiations with the All-Russian Council as long as its attitude and policy are maintained." The card vote approving the resolution was 2,551,000 for and 620,000 against.

CUBA. On May 22 the Cuban Federation of Labor was organized. The organization announced as its purpose the improvement of economic and social conditions of workers, and will furnish unemployment, disability and sickness benefits.

CANADA. There was reported at the end of 1926 a trade-union membership of 274,604. The international craft-unions totaled 179,267 of this number. In March the All-Canadian Congress of Labor was organized chiefly for the purpose of being "freed from the reactionary influence of American-controlled unions." It represented a membership strength of some 50,000 members. The One Big Union contributed 18,605 of these. The Trades and Labor Congress of Canada held its forty-third annual convention at Edmonton, August 22-26. The membership of the organization was in the neighborhood of 112,000. Over the year there was an increase in paid-up membership of 11,325. The following resolutions, among others, were adopted: For the creation of free government employment bureaus; the favoring of an amendment to the immigration law prohibiting the importation of industrial workers; extension of free education and free textbooks; a minimum wage for teachers in certain provinces; endorsement of the five-day, 40-hour week; reclassification of letter-carrier service and salary increases; various safety and health measures; extension of minimum wage legislation; the legalization of peaceful picketing; opposition to "the interference of all foreigners in the political, economic, and industrial life of China." The congress refused to protest against the breaking off of trade relations between Canada and Russia. Tom Moore, president, and P. M. Draper, secretary-treasurer, were reelected.

SPAIN. In May the General Federation of Spanish Workers submitted its programme to the government. This demanded: Enforcement of workers' insurance legislation and the adoption of unemployment, maternity and sickness insurance; observance of the eight-hour day; adoption of measures dealing with the cost of living and unemployment; extension of workmen's compensation to agrarian workers; establishment of an agricultural bank; creation of joint organizations for fixing of minimum wages; introduction of legislation for trade-union control of industry.

CHINA. A writer in the *Monthly Labor Review* spoke hopefully of the development of the trade-union movement in China. He found unionization moving apace in the south or Kwangtung Province, while in the north and the Yangtze Valley militaristic suppression had made for an uneven development. Governmental attitudes colored the situation. In the South there was official sympathy; the North, fearing Russian penetration, frowned on the movement.

ENGLISH TRADE DISPUTES AND TRADE-UNION ACT. On April 5 the English government introduced its long heralded bill for the purpose of controlling the wide powers to strike. After much opposition from Labor and Liberals, and with a number of amendments, the bill passed both houses July 29. The provisions of the bill as amended are: 1. A strike is illegal if it has any object other than the furtherance of a trade dispute within the trade where the strikers are engaged; a strike is illegal if it is calculated to coerce the government "by inflicting hardship upon the community"; illegal lockouts are defined similarly; penalties are provided and trade-unions are not exempt (thus repealing the trade disputes act of 1906). 2. No trade-union may discipline a member for refusal to take part in an illegal strike; this is made retroactive to include the general strike of May, 1926. 3. Picketing is forbidden, generally, as appears from the definitions employed. 4. Trade-unions may make political levies on their members only if specific permission has been granted in writing. 5. Civil servants are denied the right to join trade-union organizations which may include persons not in the public service; in short, they may not belong to the British Trade-Union Congress. 6. Local authorities may not make membership in trade-unions a condition for employment. 7. The Attorney General may enjoin trade-union funds if they are applied in contravention of the act. 8. A strike, for purposes of the act, is defined as "the cessation of work by a body of persons employed in any trade or industry, acting in combination, or a concerted refusal, or a refusal under a common understanding, of any number of persons who are, or have been, so employed, to continue to work or to accept employment." See *GREAT BRITAIN, History; LABOR, AMERICAN FEDERATION OF*.

TRANSJORDANIA. A territory of Asia Minor inhabited by Arabs, of which the territorial and political status was still unsettled in 1927, although nominally under the mandate of Palestine; situated to the east of the Jordan and north of the Arab dominions of the Hedjaz and Nejd. The area is uncertain because of the unsettled boundaries; the population has been estimated at 240,000, of whom 220,000 are Arab

Moslems. About half the population are nomads, the rest living in villages. A large part of the surface is desert. In the arable regions the principal pursuits are agriculture and stock raising. The estimated revenue for 1926-27 was £E208,060 and the grant-in-aid from the British government £E86,796. In 1923 the British government recognized the local Arab rule on condition that it should conform to constitutional principles and receive the approval of the League of Nations. Up to 1927 this approval had not been obtained. The general responsibility for Transjordan rests with the High Commissioner for Palestine, who is represented in the country by an agent. The Emir in 1927 was Abdullah Ibu Hussein.

TRANSPORTATION. See RAILWAYS.

TRANSVAAL. See SOUTH AFRICA, UNION OF.

TRANSYLVANIA. A portion of the Hungarian crownlands until taken over by Rumania in the latter half of 1918; formally annexed to Rumania by royal decree, Jan. 1, 1919. Area, 22,312 square miles; population, at the census of 1919, 2,678,367.

TRAVEL. See LITERATURE, ENGLISH AND AMERICAN.

TRAVIS, WALTER JEREMIAH. American golf player, died in Denver, Colo., July 31. He was born in Maldon, Victoria, Australia, Jan. 10, 1862, and received his education in the public schools there. He went to America when a young man, but it was not until 1895 that he made his first appearance in a golf tournament at Van Cortlandt Park, New York, turning in a score of 110. By 1897 he had won many prizes. In 1900 he became amateur champion of the United States. Mr. Travis held the American amateur championship three times, the Metropolitan four times and countless other titles. He reached the high-water mark of his golfing career in 1904 at Sandwich, Kent, England, when he won the British amateur championship, being the first American to hold that honor.

TREATIES. See ARBITRATION, INTERNATIONAL.

TRIESTE, trĕ-ĕst. A former crownland of Austria; occupied by Italy after the War, and retained by Italy under the peace settlement; including the port of Trieste and surrounding regions. Area, 37 square miles; population, at the census of Dec. 1, 1921, 238,655; estimated Jan. 1, 1926, 242,059.

TRINIDAD. A West Indian island north of the mouth of the Orinoco River, constituting, with Tobago, a British colony. Area of Trinidad, 1862 square miles; of Tobago, 114; total population, according to the census of 1921, 365,913; estimated at the end of 1925, 385,091. Capital, Port of Spain, with a population in 1925 of 64,536. The white population is chiefly made up of French, British, Spanish, and Portuguese, while the majority of the natives are West Indians of African descent. East Indians in 1925 were estimated at 125,238. English is the prevailing language. In 1925 the movement of population was: Births, 12,701; deaths, 7888; marriages, 1696. In the same year there were 290 elementary schools, with an enrollment of 57,785 pupils and an average daily attendance of 36,110. About 541,682 acres were under cultivation in 1925. A celebrated feature is the asphalt lake, the revenue from which in 1925 was £75,375. The petroleum in-

dustry is of prime importance, the output in 1925 being 153,527,745 imperial gallons of crude oil. There are a number of refineries and other plants for the manufacture of oil fuel, kerosene, etc. The imports in 1925 were valued at £4,395,041; exports, £5,170,355; revenue, £1,662,874; expenditure, £1,580,749; public debt, £3,400,504. The total shipping which entered and cleared in 1925 was 4170 vessels of 4,565,155 tons. The colony of Trinidad is under a Governor who is aided by an executive council and a legislative council. Governor in 1927, Sir Horace Archer Byatt.

TRINITY COLLEGE. An institution for the higher education of men, at Hartford, Conn., founded by members of the Protestant Episcopal Church in 1823, as Washington College; the present name was assumed in 1825. For the autumn term of 1927 the enrollment was 271, distributed as follows: Graduate students, 9; seniors, 41; juniors, 56; sophomores, 61; freshmen, 91; non-matriculants, 13. There were 34 members on the faculty. The endowment fund of the college amounted to \$2,920,052.82, and the income totaled \$224,547.98, exclusive of \$12,300.11 received as gifts during the year. There were approximately 100,000 volumes and 40,000 pamphlets in the library. President, Remsen B. Ogilby, Litt.D., LL.D.

TRINITY COLLEGE. An educational institution at Durham, N. C., now a part of Duke University (q.v.).

TRIPOLITANIA. An Italian territory on the north coast of Africa; until 1919 a part of Italian Libya. In that year, for administrative purposes, Libya was divided into Tripolitania and Cyrenaica (q.v.). Area, estimated at 900,000 square miles; population, according to the census of 1921, about 550,000 natives and 20,716 Europeans, of whom 18,093 were Italians. The land is rather barren, but supports some palm, lemon, olive, and fig trees. The sponge fishing industry along the coast is of great importance; in 1926 production totaled 109,450 pounds, valued at 5,446,000 lire. The imports in 1925 were 185,729,013 lire; exports, 38,153,270 lire; colonial revenue for 1926-27, 204,610,000 lire; civil expenditure, 93,787,000 lire; military expenditure, 190,823,000 lire. The chief means of transportation is along caravan routes to the interior. There are also about 140 miles of railway. Tripoli, with a population of approximately 60,000, is the capital. Governor in 1927, General Emilio de Bono.

TRIPP, GUY EASTMAN. American operator of utilities, industrialist and manufacturer, died at New York, June 14. He was born at Wells, Me., Apr. 22, 1865, and attended South Berwick Academy while working in a general store. At the age of 18 he became a clerk for the Eastern Railway at Salem, Mass., and he steadily advanced through various positions as clerk and auditor in railway and electrical companies, until in 1897 he became associated with Stone & Webster, construction engineers and operators of public utilities. In 1910 he was chairman of the Joint Committee on Reorganization of the Metropolitan Street Railway Company, New York, and his executive ability was so outstanding that he was selected in 1912 as Chairman of the Board of Directors of the Westinghouse Electric and Manufacturing Company, a position he held at the time of his death. In the World War he became con-

nected with the Ordnance Department of the U. S. Army, and was engaged in purchasing war material for the government. Commissioned colonel Jan. 10, 1918, he was made chief of the Production Division of the Ordnance Department, and was promoted to brigadier general Aug. 23, 1918, being assigned to duty as special assistant to the Chief of Ordnance. He was awarded the Distinguished Service Medal after the Armistice for "exceptionally meritorious service." After his retirement he continued his cooperation with the War Department in furthering plans for national defense and industrial preparedness. In 1923-24 he made a world tour in the interests of his company, and in Japan effected arrangements between the Mitsubishi interests and the Westinghouse Company. He received the decoration of the Second Class Order of the Sacred Treasure, the highest honor which the Emperor may confer upon a private citizen. Bates College conferred the degree of LL.D. upon him in 1924.

TUBERCULOSIS. According to Dr. Petroff, who was in charge of the Trudeau Foundation Research and Clinical Laboratory, the immunization of the young against tuberculosis is the most vital and hopeful task of the day. In the *Journal of the American Medical Association* for July 23, he wrote at length on the three possibilities of immunization—with living virulent, living non-virulent, and killed cultures. It must be understood at the start that absolute immunity is an impossibility, and in any case not essential. Mankind is infected chiefly by bacilli in very low numbers, and mass infection exists chiefly in theory. Hence, relative immunity is sufficient for all practical purposes. In the case of virulent cultures one act of immunization is not sufficient, for the process must be repeated at intervals and new bacilli are implanted in the organism. While the danger of conveying a disease is remote at the time, and admitting that inoculation of these cultures must strengthen and develop resistance on the part of the body, it is not known precisely what becomes of these organisms. They may perish or become harmless saprophytes, but they also may thrive and multiply and increase their virulence and find their way to individuals who are susceptible to the disease. It is, of course, now understood that the bacilli cannot live and thrive without a host. The chief objection to living non-virulent cultures is that they may become virulent by passage to others. The use of killed cultures is absolutely safe, practicable on a large scale, and secures a considerable degree of immunity.

Another important study from the Saranac Lake region related to the use of light rays in the treatment of tuberculosis. It was published by Dr. E. Mayer in the *Journal of the American Medical Association* for July 30. Unfortunately, the impression prevails to some extent that the actinic rays, whether solar or artificial, are a specific for tuberculosis, even of the hidden forms, and actually destroy the bacilli. The fact that consumptives recover their

health at times under the desert sun should not blind the public to other factors which make for recovery, such as pure, dry air, sleeping out of doors, physical rest, etc. But the forms of tuberculosis most apt to profit by light treatment are the superficial or surgical. Few of the hidden forms profit by it, and the only form of chest tuberculosis enumerated by the author is encountered in children in the so-called bronchial gland infection. Even in the above favorable forms, the treatment must be administered by experts and over long periods to be effective. Much unwarranted optimism over the light treatment has led to corresponding depression and skepticism.

TUBERCULOSIS ERADICATION, BOVINE. See VETERINARY MEDICINE.

TUFTS COLLEGE. A non-sectarian coeducational institution at Medford, Mass., founded in 1852. It is comprised of the school of liberal arts, Jackson College (the department for women); the engineering school; the school of religion; the Crane Foundation; and the medical and dental schools. The registration for the autumn term of 1927 was 2103. For the year 1926-27 there were 409 members on the faculty. The productive funds of the college amounted to \$7,451,095.37, and the income for the educational departments for the year to \$808,180.84. The library contained 93,000 volumes. President, John Albert Cousens, LL.D.

TULANE UNIVERSITY OF LOUISIANA. An institution of higher education, located at New Orleans, La., founded in 1834. Although the professional schools are coeducational, there is a separate undergraduate department for women. The total enrollment for the autumn term of 1927 was 2868, excluding all duplications, and was distributed as follows: Arts and sciences, 549; engineering, 267; H. Sophie Newcomb College, 699; graduate, 97; law, 74; medicine, 426; graduate medicine, 38; dentistry (seniors only, for the school was being temporarily discontinued), 19; pharmacy, 40; commerce, 568; courses for teachers, 200; social work, 16. There were 1037 enrolled in the 1927 summer session. In the autumn there were 417 members on the faculty. The productive funds, for the fiscal year ending Aug. 31, 1926, amounted to \$6,092,453.53. The library contained 112,000 volumes. President, Albert Bledsoe Dinwiddie, Ph.D., LL.D.

TUNIS. A French protectorate in North Africa, known as the Regency of Tunis; situated on the Mediterranean coast east of Algeria, bounded on the south by the Sahara and Libyan desert. The area is estimated at 45,300 square miles. According to the census of 1926, the total European population was 173,281, composed of 71,020 civilian French, 89,216 Italians, 8396 Maltese, 517 Spaniards, 646 Greeks, and 3486 other foreigners. The total native population was 1,986,427, of whom 1,932,184 were Arabs and Bedouins, and 54,243 Jews. The capital is the City of Tunis, with a population in 1926 of 185,996; other towns are Sfax, 27,723, and Bizerta, 20,593. In 1926 there were 422 public schools, including 8 lycées and colleges, and 32 private schools, of which six were Jewish schools provided by the government. The total number of pupils in the schools was 61,436. There are, besides, numerous Mohammedan schools, some of which are assisted by the state.

Agriculture is the principal industry, and the

chief crops are wheat, barley, and oats. The soil is well adapted to fruit culture, and in the south dates are especially abundant. Olive trees abound in many parts of the country. The area under wheat in 1925 was 1,643,812 acres, production, 320,000 tons; barley, 1,259,455 acres, 150,000 tons; oats, 101,790 acres, 40,000 tons. There were 16,060,037 olive trees, the produce of which is about 34,000 tons of oil yearly. In the same year 1,034,251 date trees produced 81,497,797 pounds of dates. The livestock consisted of 72,456 horses; 118,542 asses; 33,016 mules; 369,647 cattle; 1,328,087 sheep; 850,395 goats; 117,703 camels; and 19,707 pigs. Among the native industries are spinning and weaving, pottery making, saddle making, etc. The mineral resources include lead, zinc, and iron ore and especially phosphates.

A big increase in exports to various countries and a noteworthy gain in imports from the United States were the important features of the Tunisian foreign trade in 1926. Taking invisible items into consideration, it seemed certain that the trade balance in 1926 was favorable.

The revenue for 1926 was £12,125,829 and the expenditure £12,123,468. The main sources of revenue were from direct and indirect taxes and from the tobacco and other monopolies. The chief expenditures were for the finance, public works and education departments. In 1925, 9782 vessels entered the ports of Tunis. The railway mileage in the same year was 1586, of which 622 miles were broad gauge. The Bey of Tunis in 1927 was Sidi Mohamed, who succeeded July 10, 1922. The government, known as the Regency of Tunis, is under the French foreign office, which is represented by a Resident-General. The administration is a mixture of French and native institutions. Resident-General in 1927, Lucien Saint, appointed Nov. 24, 1920.

TUNNELS. During the year several important tunnels were either completed and placed in use or were virtually finished, while progress was being made on other and new projects.

HOLLAND TUNNEL. On Nov. 13, 1927, the Holland Tunnel between New York and Jersey City was put into operation and immediately functioned successfully. On the first day of operation 52,285 vehicles used the tunnel, while during the 24 hours of November 14, vehicles to the number of 17,725, of which 30 per cent were trucks, were accommodated. On November 3, a fire test, to determine the efficiency of the fire protection apparatus and the ventilating system, was made with a fire set in an old touring car with the gasoline tank punctured. Traffic was stopped, the emergency trucks were called out at the alarm, and the fire was under control in about two minutes. A second test brought out the emergency fire apparatus, and it was found that the smoke from the fire was carried away by the exhaust ports, so that by the time the fire was extinguished the smoke had practically disappeared from the tunnel. During this time the ventilating system was working at normal capacity. The toll rates for the use of the Holland Tunnel were based on those charged on the cross-river ferries, ranging from 50 cents for passenger automobiles with capacity up to seven passengers, to \$2.00 for 10-ton to 12-ton trucks. The speed of vehicles in the tunnel was restricted to 30 miles per hour with the vehicles required to keep 75 feet apart, slow-moving vehicles keeping in one line.

MOFFAT TUNNEL. Late in the year the Moffat Tunnel in Colorado, with a length of six miles, was completed, and it was expected that it would be formally opened early in 1928. This tunnel pierces the Continental Divide at an elevation of 9200 feet, passing through a shoulder of James Peak. On July 7, 1927, the main railway headings were holed through, leaving only 2700 feet of bench about 10 x 16 feet to be excavated before the tunnel would be ready for use. On December 10, the excavation of the main or railway tunnel was completed, while on the same day the last five-ton steel set of lining was placed. During the remainder of the year the concrete lining was prosecuted vigorously, and the track was laid with 110-pound rails. This tunnel was leased to the Denver & Salt Lake Ry. and was intended eventually as a part of a new railway route through Denver to Salt Lake City, Utah, and the Pacific Coast. In the semi-annual report of the Tunnel Commission the cost of the project up to July, 1927, was placed at \$14,494,437, provided for by a sale of \$18,000,000 of bonds. The total cost figure exceeded the estimated cost of \$6,720,000 by approximately \$7,750,000, due to unexpected soft and hazardous ground requiring extra heavy timber.

CASCADE TUNNEL. During the year considerable progress was made on the Cascade Tunnel, under construction by the Great Northern Railway Co. in the State of Washington. This tunnel is 7.77 miles in length, the longest railway tunnel in the Western hemisphere and the third longest in the world. It was started in December, 1925, in order to get a lower-grade line at Stevens Pass, which formerly had been crossed by a switch-back line, and later by the 2.63-mile Cascade Tunnel, which was completed in 1900. The new tunnel, which penetrates solid granite, is 16 feet in width and 22 feet in height and is lined with concrete. The construction from the west end was being undertaken from the west portal and from crosscuts every 1500 feet from a pioneer tunnel extending 5.37 miles to a shaft. The east section, 2.40 miles in length, was being driven by heading and enlargement east from this shaft and westerly from the east portal. The main tunnel was being enlarged from a 10 x 10-foot centre heading, while the pioneer tunnel heading was 8 x 9 feet. By the first of December 13,000 linear feet of side wall and arch had been placed. At this time there remained a distance of 5329 feet still to be driven between the two pioneer headings that were approaching each other from the opposite portals, and in the main tunnel 1777 feet remained to be enlarged.

DETROIT-WINDSOR TUNNEL. By a large majority the electors of the City of Detroit, Mich., approved the proposed international vehicular tunnel under the Detroit River between Detroit and Windsor, Ont., which had been sponsored by the Detroit-Windsor Subways, Inc. This action was necessary, as it involved an amendment to the city charter, giving the tunnel company the right to construct its tube under city property, while at the same time the tunnel company was to give the city a voice in the determination of tolls to be charged to users. It was provided that the city might purchase the tunnel any time after 20 years, and the tunnel was to pass to the city free of charge if it was not purchased at the end of 60 years. The proposed cross-section of the subway, which

was similar to the Holland Tunnel between New York and New Jersey, was circular, with an outside diameter of 30 feet and a deck supporting a 24-foot roadway with a ceiling clearance of 13½ feet. The total length between portals was to be approximately 5300 feet, with ventilating shafts 3900 feet apart. The mid-river section was 2400 feet in length. Bids on the contract for construction were called for late in the year.

OAKLAND ESTUARY TUBE. A subaqueous tunnel 4463 feet in length was under construction during the year, between Oakland and Alameda, Cal. This work was being done by the trench method, and involved the placing of 12 pre-cast segments 203 x 37 feet for a portion of the work. During the year, all of these segments had been successfully placed, and on December 15 it was reported that two of the 13 underwater joints had been poured and seven of the segments had been connected and made acceptable on the inside, six on the Alameda end and one on the Oakland side. As the trench was backfilled, the various segments were opened up, and after this had been done the road slab was completed and the ceilings, sidewalk and conduits were placed. At the end of the year the portal structures were being completed, and the ventilation equipment was being installed, so that the tube could be opened for service about May, 1928. See **RAPID TRANSIT**, for tunnels in new subway construction.

TUNNEY, GENE, American Pugilist. See **BOXING**.

TUPPER, SIR CHARLES HIBBERT. Canadian statesman, died in Vancouver, B. C., March 30. Born at Amherst, Nova Scotia, Aug. 3, 1855, the second son of the late Sir Charles Tupper, famous Canadian statesman, he received his education at McGill and Harvard Universities, gaining the degree of LL.B. from the latter in 1876. In 1878 he was admitted to the bar, and he practiced law at Halifax, N. S., and in British Columbia. He was first elected to the Dominion Parliament in 1882, and held office as Minister of Marine and Finance, 1888-1894, and Minister of Justice and Attorney-General, 1895. He obtained the passage of several acts providing for the safety of ships and seamen, and represented Great Britain in the Paris tribunal of arbitration of the Bering Sea question in 1893; in the same year he was honored with the rank of Knight Commander of the Order of Saint Michael and Saint George. He retired from political life in 1904.

TURBINES, HYDRAULIC. See **WATER POWER**.

TURBINES, STEAM. See **STEAM TURBINES**.

TURKESTAN, turk's-tan'. An autonomous republic in Central Asia, forming a part of the Union of Soviet Socialist Republics; comprising the provinces of Samarkand, Ferghana, Syrdarya and Semir'yetchensk. Area 571,630 square miles; population, according to the census of 1923, 7,201,551, of which 6,130,400 were rural and 1,071,151 urban. Chief towns with their latest available populations: Tashkent (the capital), 271,650; Omsk, 129,442; Kokand, 113,700. The name "Turkestan" is also applied to a dependency of China lying north of Tibet and forming a part of Sin-Kiang or the New Dominion.

TURKEY. A republic since Oct. 29, 1923; formerly the Ottoman Empire; occupying a portion of the Balkan peninsula—Turkey in

Europe—and a large part of Asia Minor with contiguous territory—Turkey in Asia; since the Treaty of Lausanne, July 24, 1923, comprising in Asia Minor the territory lying within the Caucasian frontier, the northern part of the old Turco-Persian frontier, the frontier between Turkey and Syria extending from Jazira-ih-Omar on the Tigris to a point near Payas on the Gulf of Alexandretta, and the so-called "Brussels" line between Turkey and Mesopotamia (q.v.); in Europe, Constantinople and eastern Thrace, according to boundaries fixed in the treaty; and, in the Mediterranean Sea, Imbros, Tenedos and Rabbit Islands. Capital, Angora.

AREA AND POPULATION. The area of the present republic of Turkey is estimated at approximately 494,538 square miles. The Ministry of Health placed the population at 13,357,000 at the end of 1924, but many competent observers declare this figure to be entirely too high, placing the total at about 10,000,000. Announcements of the census taken in October were made late in the fall, and placed the population at 13,641,810, a figure which was skeptically received in many quarters. In Turkish returns published early in 1924, the population of the principal cities was given as follows: Constantinople, 880,998; Smyrna, 98,846; Konia, 71,104; Brussa, 64,664; and Adana, 64,110. The population of Angora was given as 35,000.

EDUCATION. No statistical information on educational matters was available for the year. The schools are directly in charge of the Ministry of Education, and elementary education is compulsory. The policy of the republic has been to abolish religious schools of all kinds and replace them with government schools. Thus in 1924 the numerous Moslem schools were closed. The government schools comprise primary grades, secondary schools, training schools for teachers, and the University of Constantinople.

PRODUCTION. Agricultural production during 1926 was in general below that of 1925, owing chiefly to adverse weather conditions. The tobacco crop, which constitutes the largest export item in value, was estimated to be 20 per cent less than for the previous year, producing 84,000,000 pounds as against 104,500,000 pounds. The quality was reported to be poorer. Estimates of the cereal crop indicated a decrease of 20 per cent. The total cotton crop was expected to be less than for the previous year; the Smyrna region reported an increase, but decreases were indicated in all the other districts. Olive oil production for 1926 was also reported to be less than in 1925, but a larger fruit crop was expected. Estimates for the 1926 crop of raisins gave 35,000 metric tons as against 25,000 in 1925; for figs, 28,000 metric tons as compared with 20,000 in 1925. The opium crop was stated to be equal to that of 1925; the wool and mohair clip showed an increase. The mineral resources are rich but undeveloped. Among the metals worked are chrome ores, silver, zinc, borax, manganese ore, antimony, copper ore, salt, iron, etc. Manufactures are in a primitive stage, and include woolen yarn and cotton spinning.

COMMERCE. Data for the first 10 months of 1926, the latest available, showed a value decrease in both imports and exports, £1188,123,503 (\$98,407,400) and £148,972,289 (\$77,927,405), respectively, as compared with the

corresponding period of 1925, the figures for that year being imports, £T196,922,896 (\$107,303,285), and exports £T153,703,003 (\$83,752,765). A smaller adverse trade balance was also indicated, amounting to £T39,151,000 (\$20,480,000) for the 10-month period of 1926, as against £T43,200,000 (\$23,550,500) in 1925.

The value of exports to the United States, as declared through the American consulates of Constantinople and Smyrna during 1926, showed an increase of more than 26 per cent over the 1925 total, being \$17,360,525 in 1926 and \$13,741,406 in 1925.

FINANCE. The proposed budget for the 1927-28 fiscal year, as approved by the Assembly in the Spring, provided for expenditures of £T194,454,619 and estimated receipts of £T194,580,544. This represents an increase of £T5,040,855 in appropriations and £T4,421,690 in anticipated revenue over the previous budget. The most important increase was for public works (£T11,443,000), principally for railroad construction. The appropriation for national defense showed a reduction of £T5,520,000, as compared with the previous year, and represented the largest item of expenditure, or about 30 per cent of the total. With a view to more efficient collection, a bill was introduced in the Assembly, providing for a flat rate on goods as they enter the country, thereby modifying the consumption tax now in effect.

State revenues for the fiscal year ended May 31, 1927, were estimated by the Ministry of Finance to have exceeded the budget figures of £T183,020,000. On the basis of these returns, a smaller deficit was anticipated for the fiscal year of 1926-27 than for 1925-26, when it was approximately £T8,433,000. During the year new sources of revenue were created by imposing taxes on importation and manufacture of moving picture films and phonograph records, and the establishment of a State monopoly of the sale of playing cards.

COMMUNICATIONS. Statistics covering the port of Smyrna, the principal export shipping point of the country, showed slightly less activity during 1926 than in the preceding year. In 1926 a total of 2227 vessels of an aggregate tonnage of 1,935,200 called at that port, as against 2554 vessels of 1,999,000 tons in 1925. The vessel movement through the straits at Constantinople, however, totaled 12,781,400 tons, exceeding that in 1925.

The length of the railways in Turkey is approximately 2200 miles. The Angora-Kaisaria (Cæsarea) Ry. was completed May 12. This railway was begun following the voting of the appropriation for the line in March, 1924. Its construction was largely, though not wholly, in the hands of Turkish engineers and workmen, backed by government capital, and it was this fact that aroused so much popular enthusiasm over the successful completion of the project. The length of the line is 380 kilometers, with nine bridges and 33 tunnels. The estimated cost of the line was between £T26,000,000 and £T30,000,000.

GOVERNMENT. As a result of the revision of the constitution in April, 1924, the Turkish State was declared to be a republic; the religion, Islam; the official language, Turkish; and the capital, Angora. The Assembly was to be elected every four years. While, according to Article 7, the Assembly exercises the execu-

tive power through the President elected by itself and through the council of ministers chosen by him, there is a proviso that the Assembly may at any time control the actions of the government and at any time dismiss it. The President was to be chosen from among the deputies constituting the National Assembly, and his term of office was to be identical with the life of each Assembly. He is *ex officio* president of the Assembly and also, in case of necessity, of the council of ministers. He may, however, take no part in the debates of the Assembly, nor has he absolute powers to veto legislation or to dissolve the Assembly. President in 1927, Mustafa Kemal Pasha. The cabinet was constituted as follows: President of the Council, Ismet Pasha; Interior, Jemil Bey; Finance, Abdul Halik Bey; Public Works, Behij Bey; Foreign Affairs, Tewfik Rushdi Bey; Justice, Mahmud Essad Bey; Public Instruction, Nejati Bey; Public Health, Dr. Refik Bey; Commerce, Rahmi Bey; Agriculture, Sabri Bey; Marine, Insan Bey; National Defense, Rejeb Bey.

HISTORY. The failure of the United States Senate to ratify the Treaty of Lausanne signed between the United States and Turkey, left the status of American citizens and the commercial relations between the two countries in a very awkward position. The matter was temporarily straightened out, however, by an agreement between Admiral Bristol, the American High Commissioner to Turkey, and Tewfik Rushdi Bey, the Turkish Minister of Foreign Affairs, signed on February 17 at Angora. The agreement was simply a recognition of the state of affairs existing and provided for the regular diplomatic and commercial relations according to the tenets of international law. President Coolidge appointed Joseph C. Grew, under secretary of state, to the position of ambassador to Turkey in May.

Early in September elections were held throughout Turkey for a new National Assembly. Needless to say, the deputies who were elected were all favorable to Mustafa Kemal, for the simple reason that he nominated them. About half of the members of the first Assembly were not returned to office, their places being taken by younger men steeped in the newer republican ideas. The president broke all records for speech-making when he delivered a 400,000-word speech to the new Assembly on the glories of the republic from 1918 to 1923; the address consumed the better part of four days in delivery (36 hours and 30 minutes). As a result of the elections, a new cabinet under the leadership of the old premier, Ismet Pasha, was formed.

TURPIN, FRANÇOIS EUGÈNE. French inventor of high explosives, died at Pontoise, near Paris, January 24. He was born at Paris, in 1849, and after carrying on investigations in colors turned to the study of explosives, inventing melinite and other explosives. While carrying on negotiations with the British ordnance firm of Sir William Armstrong in 1889 for the English rights to melinite, he discovered that the secret of his invention had been stolen and sold abroad. He disclosed the facts of the matter in a book, and Captain Tripone, who had appropriated the information, was arrested and convicted. Turpin in turn was then charged with having disclosed matters relating to public defense, but was pardoned in 1893 and exonerated in 1901, re-

ceiving an appointment in the Ministry of War as an artillery expert.

TUSKEGEE NORMAL AND INDUSTRIAL INSTITUTE. A non-sectarian, coeducational, normal and industrial school for the higher education of negroes, at Tuskegee, Ala., founded in 1881 by Booker T. Washington. The enrollment for the autumn of 1927 was 1700, of whom 870 were women. The summer session had a registration of 798 students. There were 261 members on the faculty, of whom 146 were men and 115 women. The endowment fund amounted to \$6,681,838.84, and the income for the year to \$487,929.88. There were 38,000 volumes in the library. President, Robert Russa Moton, LL.D.

TUTANKHAMEN, TOMB OF. See *ARCHAEOLOGY*.

TUTUILA. See *SAMOA*.

TYPHOID FEVER. During the year 1927 the daily press referred often to the great epidemic of this disease in the City of Montreal, and a board of officers of the United States Public Health Service, after a first-hand study, published a report on the matter; an abstract is found in the *Journal of the American Medical Association* for July 16, with an editorial notice in the July 30 issue. The outbreak, which dated from Mar. 4, 1927, was one of the most deplorable of modern times, for between that time and Dec. 31, 1927, no less than 5115 cases, with some 545 deaths, were reported. One peak of the epidemic was reached in the fourth week, which ended on March 31, 1927, with 658 cases, while the second peak, which had 727 cases, was for the eleventh week, ended May 10. The epidemic originated in an insanitary milk supply from a certain infected area of the Province of Quebec, and could doubtless have been minimized had pasteurization been carried out. The local government, in the opinion of many sanitarians, exhibited an almost mediæval indifference to the early cases, taking no steps to investigate the origin and mode of propagation and voting no service or equipment to the city health department to meet the emergency. There were presumably both convalescent and healthy carriers of the bacilli who were handling the city's food supply, yet no steps were taken to make a survey. The advice of the U. S. Public Health Department to Americans was to keep away from Montreal until notice was given of changed conditions.

From a Florence, Italy, letter to the *Journal of the American Medical Association*, March 26, it appeared that under the Mussolini government anti-typhoid vaccination was compulsory under the following conditions: (1) For all persons employed in the care of patients or in cooking departments, disinfection services, laundries and cleaning services of hospitals, sanatoria or other therapeutic institutions, public or private; (2) for the personnel of the public laundries, those engaged in transportation of the sick or in disinfection services; and, (3) for the personnel employed in the water department or in the collection and sale of water. In addition, the prefect of a province, at the request of the provincial, may make this vaccination obligatory: (1) for all the people in his jurisdiction in case of a threatened epidemic; (2) for the personnel of any of the public services in which the chance of contagion is present in an unusual degree and (3) for any other group

of people in which prophylaxis of typhoid fever is deemed advisable. The execution of the programme was entrusted to the communes, and under certain conditions to private societies, and the physicians who perform the vaccinations must make reports to the health officers of the communes, the reports to comprise the make of vaccine, the method used, the condition of the vaccinated, etc.

The U. S. Public Health Service announced that the total cases of typhoid fever for 50 weeks in 1927, as reported by the health officers of 36 states, numbered 22,400, compared with 25,500 cases in 1926 and 30,700 cases in 1925. The year 1925 had a higher case and death rate for typhoid than the three years 1922, 1923, and 1924, but the 1925 rates were lower than any recorded before 1920. From 1900 to 1926 the typhoid death rate in the registration area of the United States dropped from 35.9 to 6.5 per 100,000.

TYPHUS FEVER. An outbreak of probable typhus in some of the southeastern States of the United States at about the beginning of the year seemed to clear up some of the mystery of the incidence of this disease. During and for some time before the World War, the extensive rôle taken by the body louse in the dissemination and virulence of typhus gave rise to the belief that it is essentially louse-borne, although it was also admitted that a mild type known as Brill's disease is not only not louse-borne but apparently not contagious at all. The new outbreak supported this conception of Brill's disease (editorial in the *Journal of the American Medical Association*, January 29). There had been no instance of direct communicability nor any evidence of louse infestation. The course had been mild. Nevertheless, the disease was typhus, both clinically and serologically. Both the mild and the severe types of the disease were seen in the same locality, but in the severe forms the disease had clearly been diffused from person to person and apparently by louse propagation. It was necessary, therefore, to conclude that typhus was essentially mild and noncommunicable until the louse appeared on the scene. But even the mild form must be transmissible by some indirect means, and this must be sought in insects other than the louse (ticks, fleas, mosquitoes, etc.) with the further possibility that some of the smaller animals, as rats and mice, serve as "reservoirs" of infection.

TYROL. ts-rôl'. A crownland of Austria before the collapse of the Austro-Hungarian Empire, situated in the Alps; after the War it was divided between Italy and the new Republic of Austria. The former received the southern portion and the latter the northern. Total area before the war, 10,302 square miles; population, 946,813. Area of the Austrian province, 4882 square miles; population, according to the census of 1923, 314,836.

UBANGI-SHARI. See *FRENCH EQUATORIAL AFRICA*.

UGANDA, oo-gân'da, **PROTECTORATE.** A protectorate of Great Britain in East Africa; lying north of Tanganyika. For administrative purposes it is divided into five provinces: namely, Eastern Province, Rudolph Province, Northern Province, Western Province, and Buganda. Area, 98,776 square miles; population, estimated in December, 1925, 3,148,481, com-

posed of 3,137,602 natives, 9176 Asiatics, and 1703 Europeans. About 780,000 of the natives belong to the civilized Baganda, a race converted to Christianity.

The chief product is cotton, which is grown almost entirely by the natives on an area estimated at 617,300 acres in 1925. The other products include cacao, oil seeds, coffee, and para rubber. The total exports for 1925 were £5,096,717, mainly cotton (£4,685,992). The import figures are not available because they are merged with those of the Kenya Colony (q.v.). The combined imports into Kenya and Uganda in 1926 amounted to £7,441,000 and the exports from Uganda were estimated at £3,597,000. The decrease in 1926 as compared with 1925 was almost entirely due to the decrease in cotton shipments and lower cotton prices. The revenue in 1925 was £1,479,284; expenditure, £1,108,396. With the exception of Rudolph Province, the protectorate is directly under the British government, represented by a governor and commander-in-chief, but the native rulers are supported in the management of their own subjects. Governor and commander-in-chief in 1927, Sir W. F. Gowers.

U'KRAINE. A region known officially as the Ukrainian Socialist Soviet Republic; including the autonomous Moldavian Socialist Soviet Republic (formed in September, 1924) and the following provinces of the former Russian Empire: Kharkoff, Poltava, Chernigov, Kiev, Volhynia, Ekaterinoslav, Odessa, Nikolaiev, Kremenchug, Donetz, Zhitomir, and Podolia. Area, 154,440 square miles; population, in 1926, 23,887,919. Capital, Kiev, with a population, in 1923, of 403,730. The great bulk of the population adheres to the Ukrainian Orthodox Church.

UNDULANT FEVER. See MALTA (UNDULANT) FEVER.

UNEMPLOYMENT. In the United States there is no compulsory reporting, nor are there central governmental employment exchanges where unemployment facts would become readily known. A plan submitted during the year and published by the Russell Sage Foundation was the unified work of a group of statistical experts. The plan required: (1) The use of the Federal Bureau of Labor Statistics as a clearing house. (2) That each State collect its own statistics. (3) That Federal bureaus coming in contact with particular industries collect employment data thereon. (4) That other Federal agencies cooperating with business, e.g. the Federal Reserve Board, lend their aid. (5) That these two questions should be answered: total number on the pay roll, and total wages paid in one pay roll period. (6) That reports be submitted monthly. (7) That these industries be included: Manufacturing, mining, communication, building construction, wholesale trade, retail trade, logging and lumber, agriculture. (8) That the sample selected represent an equal percentage of the total number of wage earners in each industry and include in proper proportions plants of different sizes, and that the sample represent localities. (9) That States and localities be separately treated. (10) That the figures be published as index numbers to make them comparable with other economic data. (11) That specialized studies be made from time to time.

The table gives the general index of employment in manufacturing industries and the general index of the pay roll totals from 1923 to 1927.

GENERAL INDEXES OF EMPLOYMENT AND PAY-ROLL TOTALS IN MANUFACTURING INDUSTRIES, 1923 TO 1927
[Monthly average, 1928 = 100]

Month	Employment					Pay-roll totals				
	1923	1924	1925	1926	1927	1923	1924	1925	1926	1927
January	98.0	95.4	90.0	92.3	89.4	91.8	94.5	90.0	93.9	90.9
February	99.6	96.6	91.6	93.3	91.0	95.2	99.4	95.1	97.9	96.4
March	101.8	96.4	92.3	93.7	91.4	100.3	99.0	96.6	99.1	97.7
April	101.8	94.5	92.1	92.8	90.6	101.3	96.9	94.2	97.2	96.0
May	101.8	90.8	90.9	91.7	89.7	104.8	92.4	94.4	95.6	95.6
June	101.9	87.9	90.1	91.3	89.1	104.7	87.0	91.7	95.5	93.8
July	100.4	84.8	89.3	89.8	87.3	99.9	80.8	89.0	91.2	89.1
August	99.7	85.0	89.9	90.7	87.4	99.3	88.5	91.4	94.6	91.0
September	99.8	86.7	90.9	92.2	88.0	100.0	86.0	90.4	95.1	90.1
October	99.3	87.9	92.3	92.5	87.6	102.3	88.5	96.2	98.6	91.2
November	98.7	87.8	92.5	91.4	85.9	101.0	87.6	96.2	95.4	87.8
December	96.9	89.4	92.6	90.9	85.1	98.9	91.7	97.3	95.6	89.3
Average	100.0	90.8	91.2	91.9	88.5	100.0	90.6	93.6	95.8	92.4

In 1925 there were 15,555 elementary and secondary schools having 1,795,193 pupils and 44,622 teachers. The soil is fertile, and the chief products are wheat, rye, oats, beets, tobacco, corn, and potatoes. In 1925 there were 4,100,000 horses, 8,000,000 cattle, 9,300,000 sheep, and 3,600,000 pigs. In 1925-26 the budget balanced at 182,594,836 gold rubles. There are approximately 11,070 miles of railways in Ukraine, about two-thirds of which are state-owned; about 2500 miles were reported under construction. The government of Ukraine is modeled on that of Russia (q.v.). At the head of the administration is a council of people's commissars. Chairman of the council in 1927, M. Chubar.

UNDERWRITING, UNDERWRITERS. See INSURANCE.

LABOR'S ATTITUDE. Under the auspices of the trade-union movement there was held at Philadelphia, July 30-31, a conference on unemployment. Labor indicated that the problem of unemployment, while difficult and needing long planning, was not beyond solution. Speakers pointed out the expedients that had met with success. The International Ladies' Garment Workers' Union, e.g., because the working year was only 31 out of 52 weeks, had secured for the workers high enough wages to tide them over slack periods, reduction of hours of work to provide employment for a larger number of employees, penalizing overtime by demanding time and one-half pay, equal division of work, no home work. But there were outside conditions which could not be controlled and necessitated the establishment of unemployment funds.

CHICAGO CLOTHING INDUSTRY. The *Monthly Labor Review* published a résumé of the working of the unemployment insurance scheme in operation in the Chicago men's clothing industry since 1923. The plan covers 350 plants employing 25,000 workers. Contributions, made up of equal shares by employers and employees, and totaling 3 per cent of the weekly salary, amounted to \$3,250,000 for May 1, 1923 to Oct. 31, 1926. Benefits paid during the period were \$2,650,000. Benefits are paid for two and one-half weeks in either of the two seasons May to October and November to April. The waiting period is 44 hours. The benefit is 30 per cent of full-time wages, with a maximum of \$15 a week. "The size of the fund is limited to an amount equal to the total maximum benefits payable during a period of two years. When it reaches that amount contributions cease on both sides until the fund is reduced to an amount less than the total maximum benefits payable during a period of one year."

GREAT BRITAIN. There were announced, during the year, figures of the Unemployment Insurance Fund for the period 1920 to 1925. The fund was first established in 1911 and until 1920 grew slowly, receipts exceeding expenditures. With the post-war depression following 1920 the fund was amended to cover the entire working class, with the exception of domestic servants and agricultural workers. In 1921-22 receipts were £43,024,085 (of which workers and employers contributed £30,553,608 and the State £11,057,001) and expenditures were £58,452,711. In 1924-25, receipts were £50,179,350 and expenditures were £51,550,823. For the period of operation, Nov. 8, 1920, to July, 1925, receipts were £203,133,528 and expenditures £233,827,723. The period following the termination of the general strike of 1926 saw a deficit in the fund of over £21,000,000.

In February a commission appointed in November, 1925, known as the Blanesburgh Committee, submitted its report to the English government. Its findings were unanimous, employers and trade unionists concurring in them. The committee agreed that unemployment insurance was a necessary feature of the English code of social insurance. Its recommendations were: That there be an insurance fund to which employers, employees, and state contribute in equal proportions. The scheme should apply to the same persons then being covered. Rates of benefit and contributions should be revised downward. Benefits for people between 18 and 21 were to be almost halved. Benefits might be granted after a waiting period of six days, if: (1) Claimant had made 30 contributions in last two years; (2) that he was genuinely seeking work; (3) that he is free from disqualification, i.e., that he has not voluntarily quit or was involved in a trade dispute. Contributions for all three groups (State, employer, and employee) in case of men over 21 were to be 5d. weekly instead of 6, 8, and 7d. respectively. The new scheme could not be introduced until unemployment had fallen considerably. On Jan. 31, 1927, there were 1,375,000 unemployed insured workers or 12 per cent of the insured body "or nearly twice the average figure under which the proposed scheme would become sound."

In November, a new unemployment insurance measure was placed before Parliament, being based, in part, on the report referred to above.

The bill retained the contributions of 8d. weekly for employer, 7d. for employee, and 6d. for the State. Benefits are reduced for men over 21 with no dependents to 17s. weekly, for adult dependents the rate is raised from 5s. to 7s., and for dependent children it remains at 2s. For young people between 18 and 21 contributions and benefits are lowered. There are two important alterations in the proposed law. A claimant is entitled to benefit if he has contributed 30 contributions in two years, and he is to get such benefits as long as he is honestly unemployed, the case to be reviewed quarterly. The other alteration calls upon the claimant to accept "suitable" work, in this case the definition being applied to work not in his own trade. Under the present law "suitable" was held to apply only to the claimant's trade or occupation.

The Ministry of Labor, in reporting the results of its survey of the employment situation in 1927, stated that "in spite of the acute depression in some important industries, the average number of persons actually in employment reached a higher level than in any previous year." It was established that in 1927 the average amount of unemployment among insured persons was lower than in any year since 1920. For 1927 the ratio of unemployment was 9.7 per cent as against 17.0 per cent in 1921. On Dec. 19, 1927, the unemployed numbered 1,194,305, a decrease of 237,535 compared with Dec. 20, 1926. One of the important contributing factors in the favorable employment situation was the small number of trade disputes. During 1927 the total number of days lost was 1,180,000, of which 700,000 days were due to strikes in the mining industry alone. This was the best showing since the years of the War.

GERMANY. In July the Reichstag passed an act by which the system of unemployment relief from public funds was replaced by a system of compulsory unemployment insurance, and which also took the public employment bureaus out of control of the states and put them under Reich supervision. The new law establishes a Federal Bureau for Employment and Unemployment Insurance. All persons liable to compulsory health insurance, to compulsory old-age and sickness insurance, as well as crews of vessels, are subject to insurance. Unemployment-insurance premiums are to be paid jointly with health-insurance fees. Premiums, met equally by employers' and employees' contributions, are to be set by the Bureau, and not to exceed 3 per cent of wages or salaries. Benefits are to be fixed according to wages received by claimants, plus family allowances. Wages were to be divided into 11 classes, and for each a standard wage was to be set. A waiting period of eight days is set. Benefits are payable after 26 weekly contributions have been made. Payments of benefits are limited to 26 weeks, after which the unemployed person is assigned to the "crisis" relief which is borne by the Reich and the States. Persons under 21 years and persons who are beneficiaries of "crisis" relief must accept any employment.

ITALY. The National Social Insurance Organization of Italy reported that in April, 1927, there were 215,316 persons totally unemployed in the country. This figure was more than double that for April, 1926.

UNION COLLEGE. A non-sectarian college for men at Schenectady, N. Y.; founded in 1795.

The 1927 autumn enrollment of regular students totaled 811, distributed as follows: academic, 517; electrical engineering, 105; civil engineering, 135; chemical, 35; physical, 19. In addition, there were 85 graduate students, and 140 enrolled in extension courses. There were 75 members on the faculty. The library contained 71,000 volumes. The productive funds amounted to \$3,500,000, and the income for the year was \$600,000. During 1926-27 there was an increase of \$160,000 in the funds of the College. A three-story building for the liberal arts departments, erected during the year, was dedicated on Nov. 5, 1927. President, Charles Alexander Richmond, D.D., Ph.D.

UNITARIAN CHURCH. A denomination believing in one God in one person, and consequently, in the purely human personality of Jesus. Unitarianism as a type of belief is ancient. The Unitarian Church in the United States developed as a modification of Congregationalism in New England, which led to the formation of the American Unitarian Association in 1825. This association is the executive organization of the Unitarian churches to-day. Each church is an independent congregation, and the denomination requires no adherence to a formal creed in its worshippers, and no profession of a particular doctrine in its ministers.

The one hundred and second annual meeting of the American Unitarian Association was held at Tremont Temple, Boston, Mass., May 24, 1927. On Jan. 1, 1927, the denomination had 422 churches, 386 of which were active. The Unitarian constituency was reported to number 131,240. There were 3265 Sunday school officers and teachers, and 21,098 pupils. Receipts for current church activities, as presented in the treasurer's statement for 1927, amounted to \$739,244.20. General denominational work is carried on by departments, of which the chief are those of publication, religious education, church extension, social relations, new Americans, foreign relations, and recruiting the ministry. The church sponsors three theological seminaries: Harvard Divinity School; Meadville Theological School, Chicago, Ill.; and Pacific Unitarian School for the Ministry, Berkeley, Cal. Missionary work of the Department of New Americans was carried on among American citizens and residents of Icelandic, Finnish, and Norwegian origin, in particular. The Department of Foreign Relations kept in communication with groups holding similar beliefs in other parts of the world. Denominational publications are: *The Christian Register* (weekly); *The Beacon* (weekly); *The Pacific Unitarian* (monthly); and *The Unitarian Word and Work* (monthly). The Association has its headquarters at 25 Beacon Street, Boston, Mass. Its president in 1927 was Louis C. Cornish; secretary, Parker C. Marean; treasurer, Henry H. Fuller.

UNITAS FRATRUM. See MORAVIANS.

UNITED BRETHREN IN CHRIST. A denomination which resulted from the religious awakening of Philip William Otterbein, Martin Boehm, and their co-workers. The church had its beginning at a "great meeting" held about 1766 in the Isaac Long barn near Lancaster, Penn. The first conference was held in Baltimore, Md., in 1789, and the church was formally organized in Frederick County, Md., in 1800. Its theology is Arminian, and baptism is

administered by any mode desired by the applicant, while its beliefs are those of the earlier evangelical denominations. The church is divided into 35 annual conferences, including those in China, Japan, the Philippines, Porto Rico, and West Africa. In 1927 there were 3135 organized churches; 1758 itinerant ministers; and 401,553 church members, or an increase of 3403 over 1926; 2878 Sunday schools, with an enrollment of 384,780, and 39,992 teachers and officers. The amount raised by the church for all purposes in 1927 was \$6,943,820, representing a gain of \$83,008 over 1926, and the value of the church property was \$27,811,241. Conference missionary appropriations amounted to \$107,120 and the General Home Missionary appropriations to \$163,152. The church maintains the following educational institutions: Bonebrake Seminary, Dayton, Ohio; Otterbein College, Westerville, Ohio; Lebanon Valley College, Annville, Penn.; Indiana Central College, Indianapolis, Ind.; York College, York, Neb.; Kansas City University, Kansas City, Kan.; Philomath College, Philomath, Ore.; and Shenandoah College, Dayton, Va. Homes and orphanages maintained are: United Brethren Orphanage and Home, Quincy, Penn.; the Otterbein Home, Lebanon, Ohio; Colonel R. M. Baker Home, Puente, Cal. The printing establishment and the headquarters of the church are located at Dayton, Ohio. *The Religious Telescope* is the official paper of the church, and *The Watchword* the young people's paper.

UNITED CHURCH OF CANADA. See CANADA, UNITED CHURCH OF.

UNITED METHODIST CHURCH. See METHODISTS, WESLEYAN.

UNITED PRESBYTERIAN CHURCH. See PRESBYTERIAN CHURCH, UNITED.

UNITED STATES. AREA AND POPULATION. The area of the United States, exclusive of Alaska, is 3,026,789 square miles. The area of the non-contiguous lands, which include Alaska, Guam, and certain Pacific islands, Hawaii, the Panama Canal Zone, the Philippine Islands, Porto Rico, American Samoa, and the Virgin Islands (American), is 711,582 square miles, making a total area of 3,738,371 square miles. The estimated population of the United States on July 1, 1927, was 118,628,000. The population according to the census of 1920 was 106,418,175. This does not include the population of the territorial possessions.

AGRICULTURE. The principal crops of 1927 slightly exceeded the ten-year average in their combined yield to the acre and in their total value. The crop acreage of the year, 357,412,005 acres, about 0.1 per cent in excess of that of the year previous, indicated that agricultural industry was no longer on the decrease, as estimates of diminution of the farm population had earlier indicated. The total estimated farm value of all crops, \$9,114,845,000, was \$876,388,000 higher than that for the crops of 1926. The value increase was occasioned in great part by the prevalence of higher unit prices. These in some cases were so much higher as to bring about a higher total value for a crop of materially smaller quantity than in the preceding year. This was true in the case of cotton in particular. The 1927 crop, 12,780,000 bales in quantity, was about 5,200,000 bales less than that of 1926; but its estimated farm value, \$1,253,592,000, exceeded that of the 1926 crop by more

than \$270,000,000. Tobacco, oats and commercial apples likewise each yielded a smaller crop of higher total value. Spring wheat, corn, barley, and rye crops were greater both in quantity and in value. Hay, attaining the phenomenally large total of 106,219,000 tons, and potatoes, of which the crop was 402,149,000 bushels, while both exceeding the quantity totals of the year previous, attained lower total farm values. While the absolute value production exceeded the ten-year average, value production per capita, owing to the estimated steady growth of the population of the country, fell in 1927 below the ten-year average by 4.8 per cent.

With regard to the regional distribution of the year's crops, a notable vagary occurred in the case of corn. Corn-growing States from Iowa eastward, Iowa included, made smaller corn crops than in 1926, while corn-growing States to the west and south of this group generally harvested larger totals, the Kansas crop being nearly trebled and that of Nebraska almost doubled. The chief spring wheat States, except Minnesota and Washington, gathered a much greater crop than in 1926, while the winter wheat crop fell off severely in the leading winter wheat States, except Nebraska. The cotton acreage was reduced in every one of 17 cotton States. But though it had been apprehended that the Mississippi River floods of the spring would lay waste a great cotton acreage, the reduction in the States chiefly afflicted only moderately exceeded that in the others, and all the chief cotton States attained increases in cotton crop total value over 1926.

For statistical and other further data on agriculture in the United States and its dependencies, see the article AGRICULTURE. Important crops are treated in the separate articles CORN, COTTON, WHEAT, etc. See also articles such as AGRICULTURE, U. S. DEPARTMENT OF; AGRICULTURAL EXPERIMENT STATIONS; AGRICULTURAL EXTENSION WORK; DAIRYING; FERTILIZERS; FOOD AND NUTRITION; HORTICULTURE; LIVESTOCK; SOILS; VETERINARY MEDICINE; FORESTRY; RECLAMATION. In the articles on individual States are presented the acreage, production and value of their more important crops in 1926 and 1927.

INDUSTRY AND COMMERCE. The course of industrial and commercial activity during the year was not marked by many extremes of prosperity or of the reverse, but activity was on the whole less than in 1926. The strike of the unionized bituminous coal miners in the central field, lasting from the beginning of April to the middle of October, exercised a moderately restraining influence on trade. Extensive damage done by the spring floods in the Mississippi River basin formed another adverse influence. The improvement of economic conditions in several of the chief countries of Europe was favorable to export business, but the tendency of certain of the European nations to raise tariff barriers against American goods worked unfavorably. The closing of the Ford automobile works for a period of several months for the purpose of remodeling the plant in order that it might produce a different type of automobile tended to diminish the buying power of the Detroit area temporarily. The abundance and ease of the ordinary forms of credit throughout the year worked uniformly in favor of increased business activity, but were not

fully availed of, as the shifting of a portion of the total of the banks' resources from commercial loans to security loans and to investments in the course of the year indicated.

Mercantile failures in the United States, according to reports of R. G. Dun and Company, were greater in number and about 27 per cent greater in the aggregate of liabilities in 1927 than in 1926. The totals were 23,146 failures in 1927 and 21,773 in 1926; liabilities of failed concerns, \$520,104,268 in 1927 and \$409,242,258 in 1926. Bank clearings exceeded those of 1926, itself a record year, by about 6 per cent. The clearings for 1927 were \$555,151,413,834; for 1926, \$523,773,772,455. But as an indication of industrial and commercial activity, the 1927 clearings were regarded as deceptive, since they derived a considerable part of their total from transactions in securities and from banking transactions of a non-mercantile sort. This was indicated by the fact that almost the totality of the increase in clearings was scored in the New York Federal Reserve district, where the bulk of the transactions in securities took place, the clearing increase for the rest of the country being negligible. Clearings in the districts of Boston, Cleveland, Chicago and San Francisco were higher in 1927, while those reported at all the other Federal Reserve banks showed declines. Reports of the American Railway Association gave the total number of freight cars loaded in 1927 as lower than the total for 1926; 51,714,312 cars having been loaded with revenue freight in 1927, or 1,384,715 fewer than in 1926. The loadings during the first four months of 1927 ran ahead of the corresponding months of 1926, but thereafter month by month failed to attain the 1926 figures. The falling off was sharpest in the last quarter. The decreased loadings were taken as an indication of a diminution of the volume of business. A termination of the bituminous coal strike in the greater part of its area in October did not promote an increase in the volume of coal shipments, and the soft coal demand remained slack. The total amount of building done in the country in 1927, according to S. W. Straus and Company, fell short of the 1926 total by about \$700,000,000. Some curtailment of employment and of wages was reported in the latter part of the year. During the first half of 1927 employment totals in the manufacturing industries as reported by the Department of Labor ran about two per cent below 1926, month by month, while pay roll totals were likewise slightly behind.

With regard to particular industries, the mining of bituminous coal was more disturbed than any other. The strike of union miners already mentioned continued from the beginning of April to the latter part of October, without notable incident. See COAL; STRIKES AND LOCKOUTS.

The anthracite industry was depressed for the greater part of 1927, owing to mild weather and low domestic demand for anthracite, as well as to the extending use of oil-burning house heating apparatus, encouraged by low prices prevailing for petroleum and its products. Prices in the petroleum industry were depressed by heavy production, due largely to the yield of the Seminole and other fields in Oklahoma, which continued heavy for the greater part of the year. In the iron and steel industry somewhat low prices prevailed, and production in most months

ran below 1926. The *Iron Age's* composite price for finished steel, from 2.453 cents on January 1, moved down to 2.293 cents on October 25, and thereafter rose slightly to 2.314 cents at the year's close. The composite price of pig iron declined from a high of \$19.71 a ton on January 4 to \$17.54 a ton at the year's end. In the automobile industry concerns producing cars in competition with the Ford make continued to maintain profitable activity until the resumption of operations by the Ford works near the close of the year, when indications of an early strenuous competition made their appearance. In the cotton textile field, the low price of 1926 cotton promoted activity, early in the year, which was later curtailed, particularly in New England. See BUSINESS REVIEW.

FOREIGN TRADE. Exports from the United States rose moderately in the calendar year 1927, while imports declined materially in total value, as compared with their total for 1926, with the result that a much higher export balance was attained in 1927 than in 1926. The export value total was, for 1927, \$4,864,804,773, as against \$4,808,660,235 for 1926. The import value total was \$4,184,378,182, for 1927; for 1926 it had been \$4,430,888,366. The resulting excess of exports for the year 1927 was \$680,426,591. The above totals included merchandise only, and were exclusive of movements of monetary metals.

In exports, the chief increase in the total for 1927, over that for 1926, was scored in shipments to two countries, Germany and Canada. Exports to Great Britain, France, Italy, Mexico, Cuba, and Brazil fell in value below the corresponding totals for 1926. The termination of the troubles caused by the British coal strike of 1926 and the material recovery in value of the French franc tended to diminish export activity in trade with those two countries. With regard to the composition of the export total, the crude foodstuff group showed a gain, as did also the group of semi-manufactured articles, while exportations of crude materials other than foodstuffs and those of manufactured foodstuffs fell off as a whole. Low prices prevailing for American cotton and petroleum during much of the year 1927 were factors in reducing the value total of the exports in the crude material group. The average of prices obtained for American goods exported declined.

The fall in the yearly aggregate value of imports was ascribed by the U. S. Department of Commerce in the main to a considerable decline in the average level of world prices outside the United States. In volume the imports approximately maintained the high level of 1926, but prices paid for goods imported averaged distinctly below those of 1926. A decline in the price of crude rubber was the chief single element in the average price decline of import merchandise, but prices for raw silk, wool and unmanufactured cotton were also notably lower. With regard to imports from the several countries, declines were widespread in the 1927 value totals. The imports from British Malaya fell in value by about \$106,000,000, contributing over one-third of the total import value decline for all countries. Other sharp declines were those in values of imports from the Dutch East Indies and from Brazil. Of the larger industrial nations, the United Kingdom contributed a somewhat lower value total to the imports

of the United States in 1927 than in 1926; while the imports from France, Germany, and Switzerland were greater in value.

Imports of gold into the United States were less in 1927; in the latter part of the year gold exports week by week for a time exceeded gold imports. The year's net importation of gold was about \$6,000,000, as against \$98,000,000 for 1926.

The values of exports from the United States to some of the principal nations in 1927, compared with 1926, were:

	1926	1927
Belgium	\$99,299,398	\$116,201,318
Denmark	50,577,039	58,678,511
France	264,003,674	228,746,051
Germany	364,161,630	481,580,787
Italy	157,401,862	131,649,544
Netherlands	155,795,044	148,268,221
Russia in Europe	48,490,061	64,086,677
Spain	68,205,707	73,772,333
Sweden	40,854,478	44,612,513
United Kingdom (Brit.)	972,606,296	840,066,096
Canada	738,567,970	835,878,090
Central America	75,051,623	76,352,857
Mexico	184,994,277	109,151,831
Cuba	160,467,680	155,882,755
Argentina	143,574,682	163,349,593
Brazil	95,449,419	88,746,757
Chile	49,043,193	37,888,715
Colombia	49,281,012	48,716,316
British India	50,012,864	63,296,981
China	110,205,014	83,510,912
Japan	260,754,079	257,581,581
Philippine Islands	68,648,351	69,520,855
Australia	108,694,795	159,125,666
New Zealand	41,574,741	32,517,214
British South Africa	51,079,969	52,485,658

Imports from some of the principal countries in 1927, as compared with 1926, were:

	1926	1927
Belgium	\$77,793,008	\$72,240,477
France	152,020,483	167,787,970
Germany	198,494,641	200,554,291
Italy	102,525,882	108,907,107
Netherlands	101,855,118	87,180,623
Russia in Europe	13,502,687	12,004,011
Spain	41,369,439	34,351,200
Sweden	44,017,955	47,891,182
Switzerland	42,083,003	45,864,356
United Kingdom	883,197,810	357,920,937
Canada	475,881,373	475,077,348
Central America	48,873,399	40,480,238
Mexico	109,806,142	137,815,044
Cuba	250,600,076	266,552,033
Argentina	88,058,085	96,981,236
Brazil	235,807,073	203,017,937
Chile	81,442,281	61,857,438
Colombia	90,241,676	87,803,351
British India	150,920,680	131,002,495
British Malaya	383,799,824	277,784,466
China	143,203,840	151,670,697
Dutch East Indies	119,616,454	91,388,340
Japan	400,692,948	402,106,184
Philippine Islands	103,796,844	115,983,729
Australia	45,738,024	38,626,656

SHIPPING. For statistics and other information in respect to the shipping of the United States during the year, see articles SHIPPING and SHIPBUILDING.

MANUFACTURES. All the leading manufacturing industries are discussed under separate articles, such as AUTOMOBILES; BOOTS AND SHOES; IRON AND STEEL; PAPER; RUBBER; SILK; TEXTILE MANUFACTURING; ELECTRICAL INDUSTRIES; etc. For engineering works see under BRIDGES; CANALS; PORTS AND HARBORS; SHIPBUILDING; etc. See also CHEMISTRY, INDUSTRIAL.

MINERAL PRODUCTION. The article MINERAL PRODUCTION AND RESOURCES gives the latest

available official figures for mineral production in the United States. The more important minerals mined in the United States are treated in separate articles. There are also paragraphs on mineral production in the articles on the individual States.

EDUCATION. See the articles on **EDUCATION IN THE UNITED STATES** and **UNIVERSITIES AND COLLEGES**. Separate articles on the most important universities and colleges are also given under their respective titles. Sections on Education are included in the articles on the several States.

RELIGION. Statistics and other information relating to various denominations are given in separate articles on the various religious bodies.

FINANCE. For a discussion of Federal finances during 1927 see the article **PUBLIC FINANCE**.

ARMY AND NAVY. The army and navy are treated separately in the articles **MILITARY PROGRESS** and **NAVAL PROGRESS**. See also article on **AERONAUTICS**.

VETERANS' BUREAU. By an act of Mar. 3, 1927, the Director of this Bureau was authorized to make loans to veterans on the security of their adjusted compensation certificates. The Bureau was thus made an agency for the accommodation of veterans desirous of obtaining the accrued value of their adjusted compensation, and unable to obtain this accommodation from banks and trust companies as the framers of the original bonus law had expected them to do. The Bureau disbursed, net, for all purposes in the fiscal year ending June 30, 1927, \$405,348,448, or \$30,756,727 less than in the fiscal year preceding. The decrease resulted chiefly from the cessation of the greater part of the activities for veterans' rehabilitation. The expenditure on such activities fell from \$25,840,552 for the fiscal year 1926 to \$2,206,556 for the fiscal year 1927. Military and naval insurance disbursements also fell, as payments declined to a normal level. The total of expenditure under the head of salaries and expenses was reduced by about \$5,800,000. The failure of Congress to pass the second deficiency bill in March, 1927, carrying \$35,000,000 for military and naval compensation for that year, rendered it necessary to anticipate in the expenditure of the appropriation of like purpose made for the year 1928. Appropriations for the Bureau for the fiscal year 1928, excluding the deficiency thus occasioned, attained \$495,225,000; those for the fiscal year 1929 were estimated in the report of the Director of the Bureau at \$485,560,000, exclusive of some \$74,500,000 to be expended for government life insurance, from receipts. The Bureau continued to form much the largest item of ordinary appropriations in the Federal Government budget.

Hospitals. There were admitted to hospitals under the Bureau, in the fiscal year 1927, 71,987 patients, or 2528 more than in the fiscal year preceding. Of the total, 32,026 were admitted to Bureau hospitals for the first time.

Adjusted Compensation. The number of benefit claims adjudicated under the adjusted compensation act up to June 30, 1927, was 3,359,178; the claims were valued at \$3,279,030,198. The chief part consisted of adjusted service certificates, to the number of 3,166,038, with a total value of \$3,248,615,081. The remainder were cash payments, and quarterly payments to veterans' dependents, in minor amounts. The death claims paid to beneficiaries of holders

of adjusted service certificates, up to the end of the fiscal year 1927, reached \$34,224,720, paid on the deaths of 33,419 veterans. Loans contracted by veterans on their adjusted service certificates, from January 1 to June 30, 1927, aggregated 689,805, to the total principal sum of \$64,433,625. Of these loans 464,468 were made by banks or trust companies and 225,337 by the Bureau itself.

The Bureau also paid active service death compensation awards to dependents of dead soldiers at the rate of \$2,255,855 a month. It supervised guardianship of 22,160 incompetent beneficiaries of veterans and of 25,200 minor beneficiaries.

PENSIONS. The war pension rolls were increased in 1927 by the Indian War pension act of March 3, granting title to pension to all who had done 30 days' service in any Indian campaign between the beginning of 1817 and the close of 1898. Soldiers, widows (including the remarried), and minor children were made beneficiaries. Rates for soldiers ran from \$20 to \$50 a month, and were payable at the lower rate, without question of disability, at the age of 62. Widows were to have \$30 a month with an additional \$6 a month for each child under 16 years. An act of Feb. 11, 1927, increased the rates of payment for loss of hand, foot, arm or leg, the latter two up to \$90 a month, and affected 1097 recipients.

The Bureau paid in pensions in the fiscal year ending June 30, 1927, \$230,152,712, as against \$207,844,348 in the fiscal year 1926. The number of Civil War soldier pensioners fell to 90,000 on June 30, 1927, from 106,790 a year previous. Civil War widow pensioners were on that date of 1927, 212,642; and in 1926, 226,650. Soldier pensioners of the War with Spain increased in number to 138,812 in 1927, from 122,182 in 1926. There remained on June 30, 1927, six soldier pensioners of the War with Mexico, 870 widows of Mexican War soldiers and 17 widows of soldiers of the War of 1812. The total number of all pensioners on the roll fell to 489,942 on June 30, 1927, from 501,723 a year earlier; it had been 1,004,196 at its highest point, on Jan. 30, 1905.

Civil Service Retirement. The Pension Bureau administered the distribution, separately from the military pensions, of civil service retirement and disability allowances. The fund for this purpose showed a balance June 30, 1927, of \$68,336,761. Under an amendment of July 3, 1926, to the original retirement act, almost all the claims of annuitants were readjudicated, with general increase in the rates of payment. There were 14,119 annuitants on the roll on June 30, 1927. The disbursements for civil service annuities, refunds and allowances in the fiscal year 1927 amounted to \$13,460,708.

PATENTS. In the course of 1926 there were granted 47,627 patents, for mechanical inventions, reissues included. Applications for patents numbered 86,028.

POST OFFICE. The deficit incurred in the annual operation of the postal service was somewhat diminished in the fiscal year 1927, as compared with the year preceding. Expenditures exceeded revenues by \$16,434,168, as against \$16,972,379 in the earlier year. The sum of \$15,072,032, however, due to the civil service retirement fund for the fiscal year 1927, was treated as cash expenditure, for the first time,

and raised the apparent deficit in like amount. With adjustment on account of payments not made in the year of their actual expenditure, the excess of the payments over the revenue in the fiscal year 1927 amounted to \$28,914,716. Revenues of the year, including the money order fees and postals saving profits, were \$683,121,989; for the fiscal year 1926 they were \$659,819,801. The 1927 revenues showed an increase of \$23,302,188 over those of 1926, or of 3.53 per cent. The continuation of the postal deficit came after the failure of Congress to enact changes in the postal rates, proposed in the last session of the 69th Congress.

Postage. Postage furnished \$609,988,127, or 89 per cent, of the postal revenue. Of the postage, the sum of \$523,601,030 was collected by the sale of stamps. Cost of postage, per capita of the population, was \$5.09. Several new issues of stamps were put out in 1927. These included two air mail stamps of regular design, in the denominations of 15 and of 20 cents. A special 10-cent Lindbergh air-mail stamp was issued in connection with the exploit of the transatlantic flier. Three commemorative stamps were the Battle of White Plains, the Burgoyne Campaign and the Vermont Sesqui-Centennial stamps, all of 2 cent denomination.

Air Mail. The Postal Service advertised for bids from private parties to carry air mail over the transcontinental route, by sections. Private service under a resulting contract began between Chicago and San Francisco July 1, 1927. The contract carrier was the Boeing Air Service, Inc. Between New York and Chicago no satisfactory bid for the service was at first received. Later the National Air Transport, Inc., contracted to carry over this section from Sept. 1, 1927. The Government air mail service, maintained from 1918 on, was thereupon discontinued, the service between New York and cities southward, to Atlanta, being let on contract, as were also the Boston-New York, Philadelphia-Washington, Philadelphia-Norfolk, Seattle-Los Angeles, Cleveland-Pittsburgh, and Jackson-Macon routes. Contracts for several additional routes were likewise advertised. The air mail service in the fiscal year 1927 flew 2,583,006 miles, with one fatality.

Rural Mail Service. During the year, 718 rural routes were discontinued, chiefly on account of consolidations or of the establishment of city delivery service; and 133 new routes were established. Many existing routes were extended. As a result, the rural service increased, so as to supply some 24,475,000 inhabitants, while the number of routes declined slightly to 44,730 on June 30, 1927.

Mail Matter. In the fiscal year 1926, as reported in 1927, the postal service handled 25,483,528,621 pieces of mail matter, or a total weight of 6,563,957,862 pounds. Of the domestic total, 15,265,624,116 pieces, weighing 397,394,982 pounds, were first class mail; 4,609,911,143 pieces, weighing 1,504,324,794 pounds, were second class (except transient); third class totaled 3,962,462,729 pieces, 309,515,031 pounds; fourth class (parcel post) matter aggregated 770,360,696 pieces, 4,131,217,139 pounds. Franked matter amounted to 32,733,617 pieces, weighing in all 5,224,733 pounds. The outgoing foreign mail matter totaled 337,780,282 pieces, in weight 91,890,319 pounds. Collect-on-delivery parcels to the number of 49,806,180 were delivered, this

total showing a fall of 1,296,333, or 2.54 per cent from that for the year previous.

In 1927 there were issued in the fiscal year 194,216,619 domestic money orders, to a total amount of \$1,647,580,285, and 3,733,563 international money orders, in amount, \$68,951,620. Totals for each kind materially exceeded those for the year preceding. Postal savings were handled in 1927 at 6,672 depositories; the balance to depositors' credit on June 30 was \$147,359,254, an increase of \$13,180,606 for the year. The number of depositors, which had fallen uninterruptedly since 1917, to 399,305 in 1926, rose in 1927 and was 411,394 on June 30.

DIPLOMATIC SERVICE. During the year a number of changes were made in the personnel of the American diplomatic service. Dwight W. Morrow of New York succeeded James R. Sheffield as Ambassador to Mexico, while Hugh S. Gibson of California, Minister to Switzerland, was appointed Ambassador to Belgium, succeeding William Phillips, who became envoy extraordinary and minister plenipotentiary to the Dominion of Canada. Robert Woods Bliss, who had been Minister to Sweden succeeded Peter Augustus Jay as Ambassador to Argentina, while Noble B. Judah of Illinois succeeded Enoch H. Crowder as Ambassador to Cuba. J. Butler Wright succeeded Theodore Brentano as Minister to Hungary, while Frederick A. Sterling was appointed Minister to the Irish Free State. William T. Francis was sent as Minister Resident and Consul General to Liberia. Harold Orville Mackenzie became Minister to Siam, succeeding William R. Russell. Leland Harrison was appointed Minister to Sweden in place of Robert Woods Bliss, while Hugh R. Wilson went to Switzerland as Minister in place of Hugh S. Gibson. The vacant post of Ambassador to Turkey was filled by the appointment of Joseph C. Grew.

The following lists give the names of the diplomatic representatives from the United States to foreign countries, and from foreign countries to the United States, in 1927:

EMBASSIES AND LEGATIONS OF THE UNITED STATES

Albania—Charles C. Hart, minister.
 Argentina—Robert Woods Bliss, ambassador.
 Austria—Albert Henry Washburn, minister.
 Belgium—Hugh S. Gibson, ambassador. (Also minister to Luxemburg.)
 Bolivia—Jesse S. Cottrell, minister.
 Brazil—Edwin V. Morgan, ambassador.
 Bulgaria—Charles S. Wilson, minister.
 Canada—William Phillips, minister.
 Chile—William Miller Collier, ambassador.
 China—John Van A. MacMurray, minister.
 Colombia—Samuel H. Piles, minister.
 Costa Rica—Roy T. Davis, minister.
 Cuba—Noble B. Judah, ambassador.
 Czechoslovakia—Lewis Einstein, minister.
 Denmark—H. Percival Dodge, minister.
 Dominican Republic—Evan B. Young, minister.
 Ecuador—Gerhard A. Bading, minister.
 Egypt—_____, minister.
 Estonia—Frederick W. B. Coleman, minister. (Also to Latvia and Lithuania.)
 Finland—Alfred J. Pearson, minister.
 France—Myron T. Herrick, ambassador.
 Germany—Jacob Gould Schurman, ambassador.
 Great Britain—Alanson B. Houghton, ambassador.
 Greece—Robert F. Skinner, minister.
 Guatemala—Arthur H. Geissler, minister.
 Haiti—_____, minister.
 Honduras—George T. Summerlin, minister.
 Hungary—J. Butler Wright, minister.
 Irish Free State—Frederick A. Sterling, minister.
 Italy—Henry P. Fletcher, ambassador.
 Japan—Charles MacVesagh, ambassador.

Underwood & Underwood

• DWIGHT W. MORROW
American Ambassador to Mexico

Underwood & Underwood

AHMED MOUHTAR BEY
Ambassador of the Turkish Republic to the
United States

Underwood & Underwood

VINCENT MASSEY
Canadian Minister to the United States

Underwood & Underwood

WILLIAM PHILLIPS
American Minister to Canada

FOUR DIPLOMATS OF 1927

Latvia—Frederick W. B. Coleman, minister. (Also to Estonia and Lithuania.)
 Liberia—William T. Francis, minister resident and consul-general.
 Lithuania—Frederick W. B. Coleman, minister. (Also to Estonia and Latvia.)
 Luxembourg—Hugh S. Gibson, minister. (Also ambassador to Belgium.)
 Mexico—Dwight W. Morrow, ambassador.
 Morocco—Maxwell Blako, diplomatic agent.
 The Netherlands—Richard M. Tobin, minister.
 Nicaragua—Charles C. Eberhardt, minister.
 Norway—Laurits S. Swenson, minister.
 Panama—John Glover South, minister.
 Paraguay—George L. Kreeck, minister.
 Persia—Hoffman Philip, minister.
 Peru—Miles Poindexter, ambassador.
 Poland—John B. Stetson, Jr., minister.
 Portugal—Fred Morris Dearing, minister.
 Rumania—William S. Culbertson, minister.
 Salvador—Jefferson Caffery, minister.
 Serbs, Croats, and Slovenes, Kingdom of—John Dyncley Prince, minister.
 Siam—Harry Orville Mackenzie, minister.
 Spain—Ogden H. Hammond, ambassador.
 Sweden—Leland Harrison, minister.
 Switzerland—Hugh R. Wilson, minister.
 Turkey—Joseph C. Grew, ambassador.
 Uruguay—U. Grant-Smith, minister.
 Venezuela—Willis C. Cook, minister.

EMBASSIES AND LEGATIONS TO THE UNITED STATES

Albania—Faik Konitza, minister.
 Argentina—Honorio Pueyrredon, ambassador.
 Austria—Edgar L. O. Prochnik, minister.
 Belgium—Baron de Cartier de Marchionne, ambassador.
 Bolivia—Dr. Don Ricardo Jaimes Freyre, minister.
 Brazil—S. Gurgel do Amaral, ambassador.
 Bulgaria—Simoon Radef, minister.
 Canada—Vincent Massey, minister.
 Chile—Don Carlos G. Dávila, ambassador.
 China—Sao-Ke Alfred So, minister.
 Colombia—Dr. Enrique Olaya, minister.
 Costa Rica—Don J. Rafael Oreamuno, minister.
 Cuba—Dr. Orastes Ferrara, ambassador.
 Czechoslovakia—Zdeněk Bieringer, minister.
 Denmark—Constantin Brun, minister.
 Dominican Republic—Angel Morales, minister.
 Ecuador—Don Juan Barberis, first secretary and chargé d'affaires ad interim.
 Egypt—Mahmoud Samy Pasha, minister.
 Estonia—Antonius Piip, minister.
 Finland—Axel Leonard Aström, minister.
 France—Paul Claudel, ambassador.
 Germany—Baron Ago von Maltzan, ambassador (died September 28).
 Great Britain—Sir Esme Howard, ambassador.
 Greece—Charalambos Simopoulos, minister.
 Guatemala—Don Luis Ibarra Rivera, first secretary.
 Haiti—Hannibal Price, minister.
 Honduras—Luis Bográn, minister.
 Hungary—Count László Széchenyi, minister.
 Irish Free State—Timothy A. Smiddy, minister.
 Italy—Nobile Giacomo de Martino, ambassador.
 Japan—Tsuneo Matsudaira, ambassador.
 Latvia—Arthur B. Iule, consul general in New York, in charge of legation.
 Lithuania—Kazys Bissuskas, minister.
 Luxembourg—Baron Raymond de Waha, chargé d'affaires.
 Mexico—Don Manuel C. Téllez, ambassador.
 Netherlands—J. H. van Royen, minister.
 Nicaragua—Dr. Don Alejandro Ossar, minister.
 Norway—Halvord H. Bachke, minister.
 Panama—Dr. Don Ricardo J. Alfaro, minister.
 Paraguay—Dr. Juan V. Ramirez, secretary of legation and chargé d'affaires.
 Persia—Mirza Davoud Khan Meftah, minister.
 Peru—Dr. Hernán Velarde, ambassador.
 Poland—Jan Ciechanowski, minister.
 Portugal—Viscount d'Alto, minister.
 Rumania—George Crestiano, minister.
 Russia—Serge Ughet, financial attaché.
 Salvador—Dr. Don Francisco A. Lima, minister.
 Serbs, Croats, and Slovenes—Voislav Antonievitch, minister.
 Siam—Lieutenant-General Phya Vajitavongs, minister.
 Spain—Don Alejandro Padilla y Bell, ambassador.
 Sweden—W. Roström, minister.
 Switzerland—Marc Peter, minister.
 Turkey—Ahmed Moustaf Bey, ambassador.
 Uruguay—Dr. Jacobo Varela, minister.
 Venezuela—Dr. Don Carlos F. Grisanti, minister.

ADMINISTRATION

THE PRESIDENT. The first important declaration of President Coolidge in 1927 was a special message to Congress on the relations with Nicaragua, delivered January 10. The propriety of American intervention in Nicaragua was maintained on the basis of treaty provisions, moral obligation, and the specific duty to protect American and foreign lives and property in Nicaragua. The treaty of peace and amity between the five Central American governments drawn up at Washington under United States auspices (though not signed by the United States) was cited as forbidding the recognition of any government seizing power by a political coup in any one of the five countries. It was advanced that Dr. Sacasa, Liberal claimant to the Presidency in Nicaragua, had been outside that country subsequent to November, 1925, and had thus, though vice president, been constitutionally disqualified from succession to the presidency. The rights of the United States under a treaty of August 5, 1914, to the necessary property for the construction of an inter-oceanic canal were represented as requiring protection, as were the lives and possessions of nationals of the United States and other countries in Nicaragua. It was stated that boats carrying munitions to the Nicaraguan revolutionaries had been fitted out in Mexican ports. See NICARAGUA.

Congress early in the year gave indications of insubmissiveness to the desires of the President. The Senate, January 24, refused to ratify his nomination of Cyrus E. Woods of Pennsylvania to the Interstate Commerce Commission. The passage of the McNary-Haugen bill by both houses of Congress was against the known views of the President, and his veto of the measure followed not unexpectedly. The veto message, delivered February 25, was a paper of unusual length—some 11,000 words—presenting an extended study of the writer's objections to the bill, on the scores of unconstitutionality, of discrimination, and of economic unsoundness.

The President temporarily gave up, in March, his residence at the White House, where extensive repairs were made during his absence. He removed to the Patterson mansion on Dupont Circle, returning to the White House only after his summer sojourn in the Black Hills. By an executive order of April 2, the President revoked the order of May 31, 1921, which had placed the Naval Petroleum Reserves Nos. 1 and 2, in California, and No. 3, in Wyoming, under the control of the Secretary of the Interior; the new order returned these areas to the control of the Navy Department. On April 6, he vetoed a measure of the Philippine Legislature calling for a plebiscite of the people of the Islands on the question of independence.

On June 13 the President, with Mrs. Coolidge, departed for a summer sojourn at the Custer State Park, near Rapid City, South Dakota. During the South Dakota stay the question of his candidacy for reelection in 1928, which had become a matter of general speculation, grew increasingly acute. After maintaining silence on the subject, he finally, on August 2, declared his intention not to seek reelection, in the brief typewritten statement: "I do not choose to run for President in 1928." This utterance was received with dismay by many Republican

leaders, who had counted on the Coolidge candidacy. Senator Simeon D. Fess of Ohio, who had previously declared for the reelection of Mr. Coolidge, engaged thereafter in an active agitation of the proposal that the Republican Party should "draft" the President for another term, that is, require that he be its candidate, even against his express will. Mr. Coolidge made no reply to these efforts at the time, and notably refrained from expressing any opinion as to the desirability of the election of a President for a third term.

In his annual message to Congress (see *Seventieth Congress, First Session*) President Coolidge emphasized the limits of practicable and wise tax reduction, which had become the foremost legislative issue. He repeated former warnings against too great a Federal control of industry, agriculture or trade. The Shipping Board was rebuked for "too often yielding" to pressure to protect private interests, and public operation of merchant vessels was characterized as not a success. The difficulty of surplus crops, according to the message, was to be met by cooperative selling, but not by government price fixing; and with regard to Mississippi flood relief, the government was not to act as the insurer of citizens against the hazards of the elements, though it could properly strengthen the Mississippi River dikes, the States benefited paying a portion of the cost.

On December 9, the President, addressing the Republican National Committee, made his first public reference to his August declaration against another term of office. He said in part: "My statement stands. No one should be led to suppose that I have modified it. My decision will be respected. After I had been eliminated, the party began, and should vigorously continue, the serious task of selecting another candidate."

FOREIGN RELATIONS

The administration of the United States in its foreign relations in 1927 was engaged in intervention in the civil war in Nicaragua, where it followed the policy of suppressing a revolutionary movement of Liberals with the use of naval forces and marines; it brought about a naval conference with Japan and Great Britain at Geneva, for the purpose of restricting naval armaments of types not dealt with by the Washington Conference of 1922, but failed to effect an agreement; late in the year, it engaged in negotiations with the French government to avert the application of a new French tariff unfavorable to certain American exports.

Naval Limitation Conference. President Coolidge issued an invitation February 10, to Great Britain, France, Italy and Japan to join the United States in a conference to be held to extend the limitation of naval armaments. France and Italy declined to take part in the conference, the French government advancing the reason that it preferred to avail itself of other existing agencies of armament limitation. Great Britain and Japan accepted. The conference of representatives of these two powers and of the United States met at Geneva on June 20. The chief British participants were Viscount Cecil and W. C. Bridgeman, First Lord of the Admiralty; the chief Japanese delegate was Viscount Saito; and the Americans were Hugh S. Gibson and Rear Admiral Hilary P. Jones.

The American and British delegations failed to agree on the maximum limit to be set on the tonnage of 10,000-ton cruisers of each of their nations. The Americans proposed 300,000 tons, and the British 600,000 tons as the maximum for all auxiliary fighting craft. Various compromise proposals were discussed. The British offered in July to limit all cruisers, destroyers and submarines to a total of 590,000 tons for Great Britain and the United States and 385,000 for Japan. They wished to retain the liberty to carry as much of this total in small 6000-ton cruisers, mounting 6-inch guns, as might seem desirable.

The American delegation, however, held to the position that the United States needed a larger tonnage of the 10,000-ton cruisers, and had no use for a great total of the smaller-type cruisers, their radius being less, and American naval bases too far apart. The conference adjourned without agreement, August 4. President Coolidge spoke reassuringly on August 9, in a newspaper interview, to the effect that the United States would not make a radical change in its naval building policy; but a great scheme of naval building was placed before Congress by the Secretary of the Navy in December.

The United States was represented at a Preparatory Disarmament Conference of representatives of divers nations, held under the auspices of the League of Nations at Geneva in December. Hugh S. Gibson and Rear Admiral Hilary P. Jones, American delegates, set forth the position of their country, remote from problems requiring special security compacts, as moving it not to cooperate in the labors of a special security committee to which the conference submitted certain problems.

French Debt. The French government, after undertaking to pay £6,000,000 a year to the British government, offered in a letter of March 1, from Premier Poincaré to Secretary Mellon, to pay provisionally the charges on its debt to the United States Treasury at the immediate rate of \$10,000,000 a year, the charge set for the year 1927 in the unratified Berenger agreement; this payment to be in addition to \$20,000,000 a year of charges on the debt for surplus war material that France had acquired. Secretary Mellon replied accepting the offer. Payment as agreed was made June 15.

Further Debt Funding. The World War Foreign Debt Commission that had been created by Congress in 1922 to negotiate debt-funding agreements with foreign nations went out of existence February 9, 1927. Subsequently, on December 5, Secretary Mellon and Secretary of State Kellogg negotiated with representatives of the government of Greece a debt-funding agreement covering the Greek war debt to the United States. The compact provided for gradual extinction of a sum of \$19,659,836 by annual payments over a period of 62 years; it provided for the further advance of the undertaking of the United States, made in 1918, to lend the Greek government up to 250,000,000 francs.

Debt Controversies. Members of the faculty of Princeton University indorsed March 10 the earlier declaration of faculty members of Columbia University for revision of the totals payable to the Treasury by foreign governments. Secretary Mellon replied March 16, controverting the Princeton declarations. Certain of his statements

were in turn challenged by the British government, early in May. A British note on the subject was delivered to the State Department, denying among other things Mr. Mellon's statement that the principal debtor governments "were already receiving from Germany more than enough to pay their debts to the United States." Secretary Mellon replied to this that his reckoning, including "such items as receipts on account of the army of occupation," was substantially true.

French Permanent Peace Proposal. In accordance with an idea previously outlined by the French Foreign Minister, Briand, in an address, the French government expressed to Ambassador Herrick early in June its desire to discuss with the United States government the negotiation of a treaty for permanent elimination of the possibility of war between the two nations. The project was again stressed August 1, by Premier Poincaré, speaking before the American Club at Paris. Diplomatic discussion of the proposed treaty was begun in December.

Tariff Negotiations with France. The State Department addressed, in September and October, a series of notes to the French government, relative to the tariff increase put in force in France on September 6. This increase placed maximum rates on certain products of American origin, while granting much lower rates to like products originating in Germany and certain other countries. The American notes asserted the claim of the United States to treatment as favorable as that accorded to any other country; the French position was that special accords in which another country granted tariff favors formed a type of reciprocity falling outside the general most-favored-nation treatment. The Treasury Department early in October ordered the application of certain countervailing increases of duties on imports from France.

The French government proposed the negotiation of a new trade treaty, and undertook to remove its tariff increases on American goods provisionally, on assurance that the United States would enter negotiations likely to permit the sale of a specific list of French products in the United States. The United States replied that its tariff act "did not envisage the conclusion of a treaty of reciprocity." A French note of November 2 requested that America remove the countervailing duties lately applied, that it desist from conducting investigations in France of French production costs as applicable in rate making under the flexible tariff clause of the Fordney-McCumber act, that it remove so far as possible the sanitary restrictions on agricultural and pharmaceutical products from France, that it agree to open at once a Tariff Commission inquiry as to the possibility of reducing tariffs on French silks, textiles, perfumes, etc., and that the Commission report be preliminary to treaty negotiations.

An American note of November 8 was sufficiently satisfactory on these points to cause the President of the French Republic to sign a decree on the 12th, substantially restoring for the time being the old duties on American goods. Objection raised by Washington to the flotation of a loan in the United States to refund an existing French obligation held by American private investors was accordingly withdrawn.

Relations with China. The proposal to revise treaties with China, in accord with the demands

of the Nationalist group in that country, was impeded by the military excesses committed on the occasion of the fall of Nanking, in the latter part of March. Chinese soldiers engaged in looting, and supposedly members of the victorious Nationalist army shot to death Dr. J. E. Williams, vice president of Nanking University. American destroyers shelled Chinese soldiers attacking American refugees in the Standard Oil compound at Socony Hill, near Nanking, and a landing party rescued the refugees. American vessels were fired upon at various occasions, from the shore, in the region of the Yangtse mouth. Strong forces of marines were dispatched to Shanghai. Following these incidents, the United States joined Great Britain, France, Italy, and Japan in a joint note of April 11, demanding of the Hankow government apology and reparation for the Nanking outrages of March 24. In his separate reply to the United States, Eugene Chen, foreign minister of the Hankow government, asserted that the fundamental cause of troubled relations was the maintenance of unequal treaties between the powers and China. Definite steps toward an understanding with the Chinese authorities were later greatly hampered by the instability of power among the Chinese groups themselves.

Mexican Relations. In a memorandum to the Senate Committee on Foreign Relations, submitted January 12, Secretary of State Kellogg gave particulars of alleged Communistic activity in Mexico designedly hostile to the United States. The Senate nevertheless, January 25, passed the Robinson resolution, favoring the arbitration of questions relating to American property rights in Mexico, as an apparent indication of its opposition to any more vigorous course of proceeding. The resolution was taken as reflecting the reaction of the Senate to the President's special message of January 10, explaining the dispatch of troops to Nicaragua, and to the Kellogg memorandum. Embarrassment was added to the relations with Mexico by the appearance, in Mexico, of stolen or forged documents purportedly of American official origin, and later by alleged Mexican official papers appearing in the United States.

Ambassador Sheffield, resigning his post, was succeeded by Dwight W. Morrow, a member of the firm of J. P. Morgan and Company, whom President Coolidge appointed September 20. The new Ambassador's arrival at Mexico City at the end of October was marked by an improvement in the tone of diplomatic relations. The Mexican Supreme Court rendered early in December a decision taken as favorable to the claims of American holders of oil and other property concessions antedating the existing Mexican Constitution. See Mexico, *History*.

Intervention in Nicaragua. The small naval force that had been landed on the coast of Nicaragua by Rear Admiral Julian L. Latimer in the year previous was increased in February by some 800 marines and sailors landed at Corinto. It was reported at the same time that the British government, feeling some disquiet over the safety of its nationals, had sent the cruiser *Colombo* to the Nicaraguan west coast. President Diaz, of the Nicaraguan established régime, proposed in March the execution of a treaty whereby the United States should guarantee political order. The Department of State at Washington was represented as opposed

to entering into such a treaty. The United States forces in Nicaragua maintained a neutral zone at Puerto Cabezas, took possession of Corinto, on the west coast, garrisoned Managua, and policed the Escondido River to prevent the conveying of munitions and arms to the Liberal forces.

Admiral Latimer opened negotiations with the Liberal leader Sacasa, who offered to accept the joint mediation of the United States and four Central American governments. This proposal was not accepted. Instead, Henry L. Stimson of New York was sent to Nicaragua April 9, as personal representative of President Coolidge, to negotiate a settlement of the hostilities. The Liberal general, Moncada, announced May 4 that he would lay down his arms, in preference to fighting the forces of the United States. The State Department announced, May 6, that under an arrangement made by Mr. Stimson both parties in the Nicaraguan conflict would be disarmed, all persons in rebellion or in exile would receive amnesty, the Diaz cabinet would admit certain Liberals as members, a Nicaraguan constabulary would be formed under American officers, and an American force would continue in Nicaragua for the time being, while Americans would supervise elections to be held in 1928. Disarmament was hastened by the payment of \$20 for every rifle surrendered by a Nicaraguan.

Sandinó, alone of the Liberal leaders, refused compliance with this arrangement; Sacasa yielded, issuing a protest against the American action. Sandinó attacked the town of Ocotal July 17, and was repulsed by American forces stationed there. The fire of the defenders and the bombs of five American airplanes were reported to have killed about 300 persons. Sandinó withdrew thereafter to an inaccessible retreat on the northern border. See NICARAGUA.

Other Foreign Relations. Canada sent to Washington, as Minister of the Dominion, under the privilege of direct diplomatic representation then lately granted by the British Crown, Vincent Massey, who presented his credentials February 18. The Canadian Minister sought a modification of the order issued by the Department of Labor April 1, placing non-native inhabitants of the Dominion under the immigration quota system. On behalf of the Dominion government Mr. Massey presented a note to Secretary Kellogg June 8, regretting the immigration order as interrupting the free communication over the border established under the Jay treaty of 1794, and pointing out special hardship to inhabitants of Windsor, Ontario, engaged in daily work in Detroit. The State Department finally, November 29, announced the making of an arrangement by which native Canadians only would receive border crossing permits, but non-native Canadians commuters already engaged in daily crossing of the border would receive priority over others of their nationals in applications for immigration passport visas.

An American delegation headed by R. W. Boyden attended the International Economic Conference held at Geneva in May. The practice of the United States, to hold inquiries in foreign countries to determine the factory costs of dutiable goods entering America, with a view to altering tariff rates thereon, was attacked by Swiss and Swedish delegates to the Conference.

President Machado of Cuba visited the United States in May, and made his presence the occasion of an informal statement of the desire among Cubans that the United States should repeal the Platt amendment, as incorporated in the treaty between the two countries, under which the United States held the right to intervene in Cuba and to supervise elections there.

With Turkey, relations were resumed, in spite of the refusal of the Senate to ratify the treaty of Lausanne. Notes were exchanged between the two governments, February 17, agreeing to resume relations, and securing for the United States most-favored nation treatment in trade, for one year, and thereafter automatically for three-months terms until denounced.

Secretary of State Kellogg proposed in January that Chile and Peru solve the Tacna-Arica difficulty by allowing Bolivia to acquire the disputed provinces. The adverse reply of Peru brought this move to a standstill.

With regard to the policy of the Administration in censoring foreign loans sought in the American market, President Coolidge expressed himself informally October 14, as holding it to be the duty of the Executive to control foreign loans as an element in foreign relations, and with a view to preventing loans that would affect such relations adversely. The Administration withheld consent for a time to a French refunding loan and refused permission for Russian borrowing.

MISSISSIPPI RIVER FLOOD RELIEF. The most severe floods in the history of the region swept the lands bordering on the lower Mississippi River and its tributaries, between the latter part of March and early May of 1927. (See FLOODS; ARKANSAS; LOUISIANA; MISSISSIPPI.) It was estimated that more than 20,000 square miles were overflowed, and that some 700,000 persons were either driven from their homes or rendered dependent for the time being on outside assistance. The work of relief was carried on by the American National Red Cross organization, in cooperation with all available Federal and State agencies. President Coolidge appointed Secretary of Commerce Herbert Hoover to direct the work of flood relief. On April 22, President Coolidge issued a proclamation setting forth the emergency and recommending a general contribution to the relief fund of the Red Cross. Refugee camps were established at 80 points between Cairo, Illinois, and the mouth of the Mississippi River. At these camps some 340,000 refugees were furnished with shelter, food, clothes, bedding and sanitary care. As many as 20,000 were gathered at one time in a single camp. Rations were supplied to about a quarter of a million persons outside these camps. The camp sanitation offered a difficult problem, and was reported to have been handled with noteworthy success. In response to the President's appeal came subscriptions of about \$14,000,000 up to the end of May. The entire work of relief handled by Secretary Hoover, however, cost about \$16,000,000, according to a radio address that he delivered on May 28, and he solicited an additional \$2,000,000. Federal governmental agencies expended in relief activities about \$5,000,000 of government funds. The immediate work of relief was eventually completed by the return of the refugees to their homes. It then remained to rehabilitate the farming industry of the overflowed areas, and for this purpose various

measures were taken. Among these was the creation, June 3, of the Flood Credits Corporation, at the suggestion of President Coolidge, and with the aid of the United States Chamber of Commerce and the Federal Farm Loan Board. This corporation took \$1,750,000 of the stock of State corporations in Arkansas, Mississippi and Louisiana, which undertook to back the credit of flood sufferers needing to purchase agricultural material in order to resume farming.

DEPARTMENT OF JUSTICE. Several important cases were prosecuted by the Attorney General to determine the working of the recapture clause of the transportation act of 1920, with regard to the railroads. A case against the International Harvester Company was decided in the Supreme Court June 6, in favor of the company, it being found that the company had complied with the consent decree of 1918. Prohibition prosecutions in the fiscal year 1927 resulted in fewer jury trials, 3,747 in 1927 as compared with 4,090 in 1926, and fewer pleas of guilty. Fines and penalties imposed were \$5,646,709 in 1927, a decrease of some \$1,847,848 from the 1926 total. Court of Claims cases to the number of 609 were disposed of; their aggregate claims against the government were \$145,537,418, and judgments obtained thereon were \$11,238,567. Among the chief groups of criminal cases, those for postal violations terminated in the fiscal year numbered 2,227; "white slave" traffic prosecutions brought 444 convictions; bankruptcy law indictments increased by more than 100 per cent. The Federal prison population on June 30, 1927, was 18,788.

SHIPPING BOARD. The name of the Emergency Fleet Corporation was changed to the Merchant Fleet Corporation, by Congress, act of February 21. The Shipping Board in a report submitted to the Senate January 11 maintained that the merchant marine, if turned over to private ownership, could be successfully operated only under a government subsidy. In October the Shipping Board assumed more direct control of its subsidiary, the Merchant Fleet Corporation, T. V. O'Connor, chairman of the Board, becoming president of the Corporation as well. The move was interpreted in some quarters as tending to maintain the government owned merchant fleet permanently under government operation.

THE FEDERAL BOARD OF MEDIATION. This body, acting under the Watson-Parker act of 1926, ended a railroad wage dispute on February 5 by granting a flat increase of 7½ per cent in wages to some 31,000 engine-men and firemen employed on 27 railroad systems east of Chicago and north of the Ohio River. Several other like wage increases were later effected.

THE FEDERAL RADIO COMMISSION. Wave lengths and power allotments were assigned to 697 broadcasting stations of the country, going into effect June 16. The number of stations allowed to use 30,000 watts, the highest power assigned, was restricted to three, and wave length assignments were changed in many cases.

THE INTERSTATE COMMERCE COMMISSION. This body progressed with valuation of the railroad lines, and was sustained on important points by the Supreme Court in valuation litigation. (See *JUDICIARY*, below.) It rejected a plan, May 19, to merge the Missouri, Kansas and Texas and the Kansas City Southern railroad systems. See *RAILWAYS*.

CONGRESS

SIXTY-NINTH CONGRESS, SECOND SESSION. Congress reassembled after the year-end recess with a large programme on its hands. The Senate had still before it the questions attendant on the election, under circumstances pointing to the inordinate campaign employment of money by Senators-elect Smith of Illinois and Vare of Pennsylvania. The proposal for legislation to relieve the economic condition of the farmers awaited disposal. A banking act, changes in the prohibition law, legislation for the regulation of radio broadcasting, matters relating to defense, the amendment of the immigration law, several issues affecting external relations and the question of tax reduction, among other subjects, all claimed early attention.

Strong opposition developed among the majority party in the Senate to the plan to continue the powers of a special Senate committee of the 69th Congress, the so-called Reed Committee, which had previously proceeded with investigation of the campaign expenses of Smith and Vare. It was the expectation that if this opposition should succeed, the powers of the special committee would come to an end, and the question of the admittance of these Senators-elect would come before another committee, the standing Committee on Privileges and Elections, for presentation in the Seventieth Congress.

McNary-Haugen Bill. Opposition to the passage of the McNary-Haugen bill, a measure to provide for the relief of the farmer class by means of a great revolving fund to be drawn from the Treasury and used to finance the carrying and export sale of surplus quantities of several leading farm products, was reduced by the adroit operations of the friends of the bill. It was provided in this measure that a specially constituted agency should acquire by purchase with this fund quantities of the designated products in excess of the home demand for them, and should sell the surpluses thus acquired to the foreign market, presumably at a loss; the loss to be made up by the levying on farmers of an equalization fund, payable by them in proportions established by the size of the crops of the specified commodities that they had raised. The bill came to a vote in the Senate February 11, and was passed by 47 votes to 39. The affirmative total included 24 Republicans, 22 Democrats, and the single Farmer-Labor Senator; that against it, 22 Republicans and 17 Democrats. The vote was exceptional in its complete disregard of party lines on a matter in which the Administration was known to hold strongly adverse views. The House of Representatives adopted on February 15 a rule by which it substituted the Senate bill for a similar House measure. On the 17th the House passed the Senate bill by a vote of 214 to 178, in which parties, as in the Senate, were both split. The measure then went to the President. He returned it with his veto, based in part on his disapproval of it as unsound and in part on the opinion that certain of its provisions, notably that making farmers assessable for the replenishment of the revolving fund, were unconstitutional. Attempts to repass the measure over the Presidential veto failed.

Banking Legislation. Within a short interval of the time of the passage of the McNary-Haugen bill, there was enacted a measure known

as the McFadden-Pepper bill, dealing with banking. It was asserted that supporters of this measure in the House had reached an agreement with supporters of the farm relief act for mutual aid. The House passed the measure January 24, and the Senate, which had previously passed the bill, adopted a conference report on it February 16. The measure as enacted provided indefinite extension of the charters of the Federal Reserve Banks and permitted national banks to establish branches within the limits of their home cities or towns, in such States as allowed State bank branches. President Coolidge signed the measure February 25. The fact that many representatives of either party who voted for this measure voted likewise for the McNary-Haugen bill gave some support to the assertion that friends of each measure had an understanding. See BANKS AND BANKING.

Armaments. Congress showed in several respects a disposition to provide for greater military and naval armament than the Administration had contemplated. The Senate Committee on Appropriations put into the Naval appropriation bill on January 17 a provision of \$1,200,000 for the commencement of construction on three cruisers that had been included originally in the 1924 programme, and of which the construction had been put off thereafter in accordance with the expressed wish of the President. Republicans from coast States, combining with numerous Democrats, voted for the bill with this provision included, when it came to a Senate vote February 1. It passed by a vote of 49 to 27. The House having passed a Naval appropriation bill without the Senate's cruiser construction feature, a conference committee met and disagreed on this point of difference. The Senate thereupon, February 22, instructed its members on the conference committee to insist that the cruiser appropriation be adopted.

The House voted the resulting conference report on the 24th, and the bill went to the President with a cruiser appropriation included. It also fixed the navy personnel at 83,200 men and provided \$9,480,000, available in the fiscal year 1928, for additional naval airplanes, to the number of 245; the Naval appropriation bill carried \$316,000,000 in all. President Coolidge signed it without comment March 2. Congress also passed an appropriation for elevation of heavy gun firing angle and for general modernizing of the battleships *Oklahoma* and *Nevada*. A measure was enacted and signed appropriating \$4,654,000 for improving the Coco Solo submarine base in the Canal Zone, Pearl Harbor and other naval stations. With regard to army strength, the House voted into the army appropriation bill provision for the maintenance of the strength of the regular army at 118,750 men. In so doing it disregarded a recommendation of the Budget Director, that army strength be reduced to 115,000 men.

Foreign Affairs. The question of bringing the United States under the jurisdiction of the World Court (q.v.) was revived by a Senate resolution, proposed by Trammell of Florida, that the resolution of a previous session, to bring the United States under the World Court, with reservations, be rescinded. The Trammell resolution was defeated by a vote of 59 adverse to 30 in favor of it, on February 9. The World Court issue thereupon fell into abeyance in the

Senate. With regard to participation in the economic conference of May, 1928, under the auspices of the League of Nations at Geneva, both houses voted without demur an appropriation of \$15,000 asked by the President, in a special message of February 5, to cover the cost of American participation.

The Senate considered in January the treaty with Turkey previously executed at Lausanne, an instrument for the reestablishment of peaceful relations with the Turkish government. The Committee on Foreign Relations, headed by Borah of Idaho, favored ratification of this treaty, but a strong opposition developed under the leadership of King of Utah, who maintained that the treaty failed to provide for the security of Armenians and of Christians generally in the Turkish territory. On a vote taken January 18, ratification was refused by 50 adverse votes to 34 in favor.

In their attitudes to the Administration policy toward Mexico and toward Nicaragua, the two houses were somewhat divided. President Coolidge in a special message to Congress on the subject, delivered January 12, declared that he had evidence that munitions, formerly possessed by the Mexican government, had been shipped to revolutionists in Nicaragua from Mexican ports, with knowledge of Mexican officials. Secretary of State Kellogg informed the Senate Committee on Foreign Relations January 12 of his belief that the Mexican government was seeking to establish a Bolshevik and anti-American régime in Nicaragua.

Soon after these declarations the House of Representatives Committee on Foreign Affairs approved on February 1 the Fairchild resolution, indorsing the Administrative policy. Strong Democratic opposition developed, and the resolution did not come to a House vote, up to the end of the session. A resolution offered by Moore of Virginia, hostile to the Administration course, did not emerge from committee. In the Senate, Wheeler of Montana defended the Nicaraguan Liberals as early as January 3, and offered a resolution for the withdrawal of the American forces. Borah of Idaho attacked intervention on January 7. Reed of Missouri and Heflin of Alabama followed suit. Criticism in the Senate gave occasion to the President's special message on the subject, above mentioned. Senator Borah thereafter, February 22, offered a resolution that the Senate Foreign Relations Committee visit Central America in the recess of Congress, and study the subject at first hand. The committee itself rejected on February 26 this somewhat exceptional proposal to send Senators as a direct commission of inquiry into a foreign country, but it favored an inquiry to be held at Washington during the recess. The Robinson resolution, favoring arbitration of differences with Mexico, passed the Senate January 25.

With regard to Mexican dealings with the American oil interests in that country, the Senate adopted, February 3, a resolution calling on the Secretary of State to furnish it with information on Mexican oil concessions, and on the number of the holders of these who had accepted the restrictions placed on concessions by the then existing laws of Mexico. Mr. Kellogg complied February 16. In its treatment of the Nicaraguan and Mexican matters the Senate gave evidence that the Administration would meet with strong combined Democratic and in-

surgent Republican opposition in any but a modified form of its policy.

Radio Regulation. A compromise between the Dill (Senate) and the White (House) bill resulted in the final passage, February 18, of a radio control measure. This measure, as signed by the President, provided that he appoint a Federal Radio Commission of five, empowered for one year to exercise broad regulatory functions, including the allocation of radio wave lengths. Penalties were provided for infraction of regulations that it might make and for false statements to it. The measure contained provisions against the monopolization of radio broadcasting and against the granting of licenses to foreign governments or foreign-owned companies. Repeal of earlier radio broadcasting legislation was provided, so that the commission might have a clear field. At the end of a year the regulatory powers of the Commission were to pass to the Department of Commerce, but it was to retain the power to adjudicate appeals in matters of radio regulation.

Tax Legislation. The Democratic minority in the Senate sought to promote action on the proposals of President Coolidge, made late in the year previous, that the session should enact a reduction in the income tax rates. Against minority opposition a resolution of Senator Norris of Nebraska was passed, February 4, recording it to be the sense of the Senate that Treasury surplus should be applied to reducing the National debt. In order to enable the Treasury to repay some \$175,000,000 of taxes illegally collected in previous years, from some 308,188 claimants, an appropriation was included in the urgent deficiency bill, which however failed of passage. See **TAXATION**.

Prohibition Enforcement. An act passed March 3, by the House, and previously by the Senate, placed the enforcement of the prohibition law in the hands of a bureau created for this purpose, and forming a distinct subdivision of the Treasury Department. To this agency, styled the Bureau of Prohibition, was to be transferred the organization of its predecessor, the Prohibition Unit. The act effected a profound change in the status of the prohibition personnel by subjecting its members to the civil service rules. See **PROHIBITION**.

With regard to immigration, the Senate passed in February and the House in turn passed March 3 a joint resolution to the effect that the provision as to the admittance of quotas of immigrants as determined by their nations of origin, in the Immigration act of 1924, should become operative only on July 1, 1928, instead of so doing July 1, 1927, as contemplated in the act. Salaries of judges were increased; those of Supreme Court Justices to \$20,000 and of the Chief Justice to \$20,500. Federal acquisition of the Cape Cod Canal was authorized in the river and harbor act.

A filibuster in the Senate put a virtual end to effective action in that body in the last days of the session. In consequence of this the adjournment on March 4 left a considerable list of bills unpassed. Among these were a second deficiency bill carrying \$93,716,753, much of it urgently required for the conduct of various governmental activities, the Federal courts included; a large appropriation for construction of public buildings; a bill for the restoration of enemy alien property; a measure

for the increase of the retirement allowances of disabled emergency officers of the War period; legislation to enable the government to replenish its stock of medicinal liquor; measures relating to water-power developments at Muscle Shoals and at Boulder Dam; and postal rate legislation. No action was taken on the resolution of Representative Fairchild of New York to amend the Federal Constitution so as to render ineligible for a further term a President who had served one full term and two years or more of a second. The recurring resolution to amend the Constitution so as to move the inauguration of a President forward from March to January and the convening of a Congress in regular session from the second December after its election to the January immediately after was not voted upon. The House on March 2 again voted, this time by 193 to 183, against a bill to reapportion representation (as provided by the Fenn bill) according to the 1920 census.

The closing filibuster in the Senate prevented action in that body to prolong the life of the Reed committee. The status of this committee consequently remained in doubt, and it lacked funds to pursue its investigation of the Senatorial elections of 1926 in Pennsylvania and Illinois. The committee, however, maintained its existence in fact, and later the President of the Senate, Vice President Dawes, recognized its existence by filling vacancies with interim appointments.

SEVENTIETH CONGRESS, FIRST SESSION. The Seventieth Congress convened on December 12. The Senate was composed of 48 Republican and 47 Democratic members and 1 Farmer-Labor member; the House of Representatives, of 237 Republicans, 105 Democrats, 2 Farmer-Labor members, and one Socialist. Of these numbers, however, 3 among the Republican Senators-elect were opposed with regard to their taking their seats, and one Representative was similarly challenged. All four were Republicans: the Senators, Frank L. Smith of Illinois, William S. Vare of Pennsylvania and Arthur R. Gould of Maine; the Representative, James M. Beck of Pennsylvania. Because of the almost even balance of parties in the Senate, resulting from Democratic gains in the Senate elections of 1926, the contest over seating the challenged Senators-elect was earnest and persistent. The House on the opening day reflected Nicholas Longworth of Ohio as Speaker.

In the Senate, Norris of Nebraska offered resolutions to block the admission of Smith and of Vare until formal investigation of pending charges against them had been made. Uncertainty as to the attitude of several insurgent members of the Republican group in the Senate led to the postponement of the election of officers of that body, lest the Democratic group, with the support of the Republican insurgent wing, should establish control. Later, however, the Senate Democrats united on the policy of avoiding an attempt to assume responsibility for organizing the chamber. On December 9, with the support of the insurgent group, and of Shipstead of Minnesota (Farmer-Labor) a Republican organization was effected.

President's Message. The annual message of the President was read to Congress December 8. Those parts of it which bore most directly on proposed legislation were: A proposal that Congress set up a board to promote cooperative

marketing of farm products and furnish it with a revolving loan fund to employ in its operations; a suggestion that Congress provide for the building of improved dikes and spillways for the control of floods in the Mississippi River and its tributaries, the United States assuming a greater share of the cost than it had in previous work, but the individual States carrying such share of the expense as could fairly be charged to them; a recommendation that Congress appropriate for the building of additional cruisers, without, however, following a policy of competitive naval armament; advocacy of the sale of the government-owned merchant marine to private acquirers, and of the disposal of the Muscle Shoals power development to private parties. The message also recommended legislation to render possible the completion of the return of property of former enemy aliens, seized during the war, and action to promote and simplify the consolidation of railroads.

The President's budget message was delivered separately, December 7. It represented the estimated ordinary receipts of the government for the fiscal year ending June 30, 1929, on the basis of the existing revenue law, as \$3,809,497,314; proposed total expenditures, from ordinary receipts, of \$3,556,957,031; and showed a resultant prospective excess of receipts totaling \$252,540,283. In these figures the postal revenue and expenditure were not included. Tax reduction was recommended, but not to exceed \$225,000,000. The estimated total of ordinary expenditure for 1929, reduction of public debt excluded, was \$2,294,170,372, as against totals for the fiscal year 1928 of \$2,158,057,611 in appropriations and \$158,441,685 in supplemental appropriations. The 1929 estimate included nothing additional for flood-control construction. The need of maintaining a balance of the budget was emphasized, it being pointed out that the President could not legally sanction appropriations in excess of the total at which the budget would balance.

The Revenue Bill. While general agreement between the Administration and all groups in Congress existed, to the effect that the surplus in the Treasury both warranted and to a certain extent imposed tax reduction, views differed widely both as to the extent and as to the direction in which taxes should be cut. During the interval between March 4 and the convening of the new Congress, the House Committee on Ways and Means had studied the revenues in detail and had framed a revenue bill. This bill was introduced in the House December 6. It exceeded the recommendation of the Treasury to the extent of providing for a diminution of the corporation income tax rate to $11\frac{1}{2}$ per cent a year, from $13\frac{1}{2}$; the Treasury had favored a cut to 12 per cent. The committee originally estimated that this provision would lower the revenue by about \$166,000,000, and later the estimated diminution was put somewhat higher. The bill also allowed an increase of credit to \$3000 (from \$2000) to corporations with \$25,000 income or less; provided exemption up to \$1, on the tax on admittance to places of entertainment; allowed a reduction of the tax on dues to 5 per cent, from 10 per cent; halved the automobile tax, lowering it to $1\frac{1}{2}$ per cent; and made provision for the repeal of the stamp tax on sales of prod-

uce and the reduction of the stock transfer stamp tax to 1 cent, from 2 cents.

The entire estimated reduction contemplated by the bill was \$232,735,000. It thus distinctly exceeded the \$225,000,000 set by the President and the Secretary of the Treasury as the safe maximum. It made no provision for further reduction of the personal income tax, and disregarded recommendations of Secretary Mellon as to the desirability of cutting surtaxes and the estate tax. Democratic Representatives, led by Garner of Texas, contended in the House for more extended tax reduction than the bill proposed. An amendment wiping out the automobile tax altogether was passed, December 14, by a vote of 166 to 142, by a combination of Democrats and some Republicans, notably the Michigan delegation. An amendment graduating the income tax for the benefit of small corporations was likewise adopted, December 12. The House passed the bill with these and certain other amendments, December 15, by a vote of 366 to 24; it was estimated that the measure as sent to the Senate involved a total reduction of \$289,765,000 in yearly revenue.

The bill on entering the Senate went to the finance committee, which postponed action on it, in apparent conformity with a published declaration of Secretary Mellon, that the ability of the revenue to meet the increased cut could be judged better after the receipt of the installment of Federal tax payments due Mar. 15, 1928.

Other Bills. The House passed December 20, and sent to the Senate, a bill for the settlement of claims adjudicated by the Mixed Claims Commission with regard to aliens in the late war. It provided for return of property of German nationals, previously seized, and remaining in the possession of the Alien Property Custodian; the settlement of German nationals' claims against the United States for seized ships, patents and the like; settlement of American citizens' claims against the German government. Twenty per cent of former property of Germans was to be retained by the Custodian for six years to assure settlement of American claims by Germany; the lesser alien owners were, however, to be reimbursed or reinstated in their property immediately, up to claims of \$100,000; Grover Cleveland Bergdoll and other fugitives from the draft were to be excepted from benefits.

President Coolidge submitted December 8 a plan of flood control for the Mississippi valley, prepared by Major General Edgar Jadwin, Chief of Engineers, U. S. A., calling for the expenditure of \$296,400,000 in works along the lower course of the river, \$185,400,000 for actual flood control and \$111,000,000 for channel stabilization. The plan called for expenditure over 10 years, the first year at \$25,000,000 and succeeding years at some \$30,000,000 a year. The United States was to bear 80 per cent of the cost and States directly affected the remainder. A strong demand among the Mississippi States that the nation bear the entire cost and that it extend the works to the upper river and tributaries prevented the progress of this legislation up to the close of the year.

Naval Armament. Chairman Butler of the House Committee on Naval Affairs presented to the House December 14 a vast five-year naval building programme, calling for \$725,000,000 of construction. The plan involved the building

of 25 light cruisers, 9 destroyer leaders, 32 submarines and five aircraft carriers, and was in consonance with the views of Secretary of the Navy Wilbur. The House on December 9 sustained the position of the preceding Congress on gun elevation by defeating a prohibitory clause aimed against the project, which had been inserted in the deficiency bill; an element in the House continued to contend that the proposed elevation of the heavy guns on the battleships *Oklahoma* and *Nevada* was contrary to the engagements made with Japan and Great Britain.

Cases of Vare and Smith. An effort, led by Reed of Pennsylvania, was made by a group of "regular" Republican Senators to prevail on the Senate to swear in Senators-elect Vare of Pennsylvania and Smith of Illinois in advance of the determination of the charges affecting their qualifications. This effort failed in the party caucus preliminary to the opening of the session. Vice President Dawes ruled December 6 that the cases of the two candidates for admittance took precedence of other business, and the Norris resolution against admitting Senator-elect Smith was debated. On the following day the Senate by vote of 53 to 28 denied Smith admittance, and referred his case to the committee on campaign funds (the Reed committee) for further investigation. It made like disposal of the Vare case December 9, by vote of 56 to 30. The significance of these proceedings lay largely in the fact that, once admitted, neither individual could have been cast out from the Senate by less than a two-thirds vote. In the House, James M. Beck, who had been elected to fill a vacancy from a Philadelphia district, was challenged by Garrett of Tennessee, Democratic floor leader, on the ground that he was not an actual inhabitant of the State of Pennsylvania. He was admitted to take the oath, whereupon the investigation of his case was committed to election committee number 2.

The Hearst Documents. Newspapers controlled by William Randolph Hearst having published serially, between November 14 and December 10, the alleged text of documents to the purport that high officers in the Mexican government had planned to pay \$1,215,000 to four United States Senators, whose names were however not then published, the Senate, December 9, created a special committee to investigate the allegations. See *MEXICO, History*.

JUDICIARY

Progress of Oil Cases. The United States Supreme Court in a decision rendered Feb. 28, 1927, held that the Elk Hills oil leases had been corruptly obtained and that the property should be returned to the possession of the government. The same court ruled, October 10, that the Teapot Dome oil leases were fraudulent and void. It was estimated that the court mandate in the Elk Hills case required the Doheny interests to reimburse the government to the extent of from \$10,000,000 to \$20,000,000, in money or its equivalent. The Court refused to grant countervailing payment to the Doheny interests for development work on the leases or for storage tanks built at Pearl Harbor and San Pedro. Harry F. Sinclair was tried in the District of Columbia Supreme Court for contempt of the Senate in refusal of testimony on the

Teapot Dome leases, and was found guilty March 17. A sentence of three months of prison was imposed. The District Supreme Court ordered, November 15, the seizure of \$100,000 of property of a fugitive witness for the conspiracy prosecution of Sinclair, Harry M. Blackmer, under a statute passed by Congress for the purpose. Fall and Sinclair were brought to trial before Justice Siddons of the District Supreme Court in October on the conspiracy charge related to the Teapot Dome leasing. A mistrial was declared November 1, when it came to light that agents of the defense were engaged in following or attempting to approach the jurors. William J. Burns, head of a detective agency and former head of the Federal Bureau of Criminal Investigation, affirmed before Justice Siddons that men in his employ, as the agents of a business subordinate of Sinclair, had shadowed jurors.

Alien Property Prosecutions. Former Attorney-General Harry M. Daugherty and former Alien Property Custodian Thomas W. Miller were retried in February, 1927, on the charge of conspiracy to defraud the Federal government in the transactions relative to the American Metal Company, in the New York Federal District Court. The jury disagreed as to Daugherty, but found Miller guilty. Miller was sentenced to 18 months' imprisonment and a fine of \$5000.

Trust Act Cases. The United States Supreme Court sustained, February 21, the conviction of 20 individuals and 23 corporations on the charge of having sought illegally to fix pottery prices. Eight of the defendants were sentenced to prison, in the Federal District Court of the Southern District of New York, the sentences being later suspended; and fines aggregating \$169,000 were imposed. On April 11, the United States Supreme Court held that the Bedford Cut Stone Company and other quarrying corporations were entitled under the Clayton Act to injunctions against the activities of a labor organization, the Journeymen Stone Cutters' Association. The Court on June 6 voided the government's bill against the International Harvester Company to the effect that the company had violated the anti-trust law since the consent decree entered against that company in 1918.

Revenue Cases. The United States Supreme Court in a decision rendered by Justice Stone March 21 invalidated laws of Wisconsin, Kentucky, and Minnesota imposing taxes on shares of National banks, in so far as such taxes were levied against the banks at a higher rate than against competing capital. The Circuit Court of Appeals at New York, in the McNeir case, January 11, affirmed the constitutionality of the gift tax imposed by the Revenue law of 1920, and subsequently repealed. The Supreme Court, in Blodgett against Holden, held on November 1 that the gift tax of 1924 did not apply to gifts made before the passage of the act. The United States Court of Customs Appeals decided February 24 that the flexible duty provision of the tariff act of 1922 was valid, and not an undue delegation of the lawmaking power to the President.

Interstate Commerce Commission Cases. The United States Supreme Court denied judicial review of valuation orders of the Commission, February 21, in the case of the Los Angeles and Salt Lake Railroad Company. A special court

of three Federal judges passing on the case of the St. Louis and O'Fallon railway, December 10, sustained the Commission's order that this railroad pay \$226,000 as representing one-half its net income above 6 per cent on the commission's valuation of the property. The Court found itself not called upon to review the valuation methods that had been employed. See RAILWAYS.

UNITED STATES MILITARY ACADEMY. A government institution at West Point, New York, for the theoretical and practical training of cadets for the military service of the United States; opened in 1802. On Sept. 1, 1927, the total number of cadets was 1259, distributed as follows: first class, 263; second class, 310; third class, 291; fourth class, 395. There were 194 members on the faculty. The academy is a component part of the regular army of the United States and is maintained solely by appropriations from the War Department, which in 1927 were \$2,246,587, for salaries and maintenance of public works, and \$861,000 for continuing construction. The library contained 108,000 volumes. Superintendent, Maj.-Gen. Edwin B. Winans, U. S. Army.

UNITED STATES NAVAL ACADEMY. A school for the education and training of midshipmen, at Annapolis, Md.; founded in 1845. The total number of midshipmen at the beginning of the academic year 1927-28 was 1551, distributed as follows: first class, 182; second class, 263; third class, 504; fourth class, 602. The faculty numbered 221. The library contained 65,800 volumes. Midshipmen after graduation are commissioned as ensigns in the United States Navy, and occasionally to fill vacancies in the Marine Corps and in certain staff corps of the Navy. Superintendent, Rear Admiral L. M. Nulton, U. S. Navy.

UNIVERSALISTS. A religious denomination existing chiefly in the United States, Canada, and Japan. It holds as parts of its doctrine the universal fatherhood of God and the final harmony of all souls with God. Its churches are grouped in 28 State Conventions and 2 State Conferences. A General Convention, held biennially, met in 1927 at Hartford, Connecticut. A report on church unity, adopted by the Convention, was significant in that it emphasized that the basis of Christian unity is to be found not in a common creed or similar practices of various churches, but in the recognition that Christianity is primarily a way of life. The Convention decided to proceed as rapidly as possible with the building of a Universalist National Memorial Church in Washington, D. C., and in putting into operation in the near future a ministers' pension plan. Resolutions adopted put the Convention on record as favoring the abolition of capital punishment and also as favoring the outlawry and abolition of war, either offensive or defensive.

The number of churches in 1927 was 628; ordained ministers, 500; communicants and adherents, 86,983; Sunday schools, 421. The denominational periodical, the *Christian Leader*, is published weekly. Headquarters of the denomination are 176 Newbury Street, Boston, Mass. The Rev. Frank D. Adams, D.D., of Detroit, Michigan, was president of the General Convention in 1927.

UNIVERSE, STRUCTURE OF. See **ASTRONOMY.**
UNIVERSITIES AND COLLEGES. ENROLLMENT. Dr. Raymond Walters for a number

of years collected registration statistics from a group of American colleges and universities. He reported in *School and Society* the enrollments in 211 institutions from which reports were received as of Nov. 1, 1927. The enrollment in 42 institutions having 3000 or more students had increased 28 per cent since 1922. The increase over the five-year period for the entire group of 211 institutions was 25 per cent. The 10 largest institutions based upon regular full time students were California, 17,311; Columbia, 13,275; Illinois, 12,033; Minnesota, 11,307; New York University, 10,218; Ohio State, 10,035; Michigan, 9700; Wisconsin, 8942; Harvard, 8,030; and Pennsylvania, 7565. The ranking of the institutions was changed when part-time and summer school enrollments are considered. Columbia with an enrollment of 32,244 resident students headed the list. California with 25,534 came second, and New York University with 22,768 ranked third.

The three largest summer schools were: Columbia, 13,857; California, 9857; and Chicago, 6474. The largest exclusively women's colleges were: Hunter, 4041; Smith, 2077; Wellesley, 1533; Simmons, 1416; Florida State College for Women, 1401; Vassar, 1149, and Goucher, 1053.

The University of California had the largest enrollment of men undergraduate students, 4,002, and also the largest enrollment of women undergraduates, 5690.

The United States Bureau of Education published the enrollment statistics for 402 institutions engaged primarily in teacher training. Of these 101 are classified as teachers' colleges, 102 as state normal schools, 27 as city normal schools, 108 as county normal schools and 64 as private normal schools. The most noteworthy change since 1920 was in the increase in teachers' colleges. In that year there were only 46 institutions classified as teachers' colleges.

The total number of students enrolled in teacher-training institutions in 1926 was 494,290. In 1910 there were only 113,085 enrolled. There was a total of 900,000 teaching positions in the United States. It is evident, therefore, that there were enough persons enrolled in 1926 to fill one-half of the teaching positions in this country. The problem of placing the graduates is an increasingly difficult one. Several cities had abolished their teacher training schools because they could not place the graduates. The average cost per student based upon enrollment and expenditures of all classes of institutions is in excess of \$250 per year; an over supply of teachers, therefore, represents a financial loss that the states are beginning to consider.

GIFTS AND BENEFACTIONS. Many large gifts for educational purposes were made during the year. Among them were the following: The late Henry Edwards Huntington left \$8,000,000 to be used exclusively for research in American and English history. John D. Rockefeller, Jr., gave \$1,750,000 to the University of California to establish a Pacific Coast International House similar to the one in New York City. George C. Booth, Detroit publisher, gave \$8,500,000 toward establishing the Cranbrook Foundation. The residuary estate of the late Olivia Phelps Stokes, which might amount to \$1,500,000, was bequeathed to Barnard College.

The Albany Medical College received a gift of \$100,000 from Mrs. James Munroe Low to

endow a chair of pathology. Antioch College received \$300,000 from Mrs. C. F. Kettering for a new science building. Roger Babson, statistician and founder, gave to Babson Statistical Institute of Wellesley Hills \$1,200,000 and agreed to donate \$60,000 annually until his death. Barnard College received from the late Mrs. Fanny Foster Clark \$100,000 to establish a Thomas F. Clark Students' Loan Fund. Bowdoin College received from Augustus F. Moulton \$175,000 for a social centre and also a promise of funds for maintenance and \$25,000 more if needed, and also \$150,000 from the estate of Dr. Thomas V. Coe. Bryn Mawr College was to receive \$25,000 and the College Alumni Association property, valued at \$1,000,000, from the Charles L. Tiffany estate. The college also was to receive \$369,520 by the will of Mrs. Alice D. Jackson.

The University of California was awarded \$250,000 under the will of Edward F. Searles; from Mrs. Phillip Ernest Bowles the university received funds to build the first unit in a dormitory system and to endow two fellowships, the whole amounting to about \$300,000, and from William A. Clark, Jr., property valued at four or five million dollars; also from Mrs. Clara Hollman Heller, for the support of a professorship in law and research in social economics, \$186,000.

Dr. Ambrose Swasey of Cleveland gave \$100,000 for the establishment of a chair of physics in the Case School of Applied Science. The graduate Library School, Chicago University was endowed by \$1,000,000 from the Carnegie Corporation. The University of Chicago also received the following gifts: By the will of the late George French Porter, \$200,000; from Mrs. Gertrude Dunn Hicks \$300,000 for an orthopedic hospital; from George Herbert Jones \$415,000 for the construction of the George Herbert Jones Research Laboratory; from the General Education Board \$250,000, and \$30,000 for the improvement of the Haskill Oriental Museum; also \$750,000 by the will of Edward T. Jeffrey, banker, for the Free School of Mechanic Art.

Colgate University received from Edward S. Harkness \$250,000 for a new dormitory, and from Colonel Austen Colgate one-fourth of his residuary estate. The estate is estimated at several million dollars. Columbia received \$100,000 toward the new medical buildings. Cornell University was to receive in time the sum of \$150,000 from the estate of J. Norris Oliphant. Col. Henry W. Sackett of New York gave \$200,000 to Cornell University for the landscape development of the campus. Cornell also received from the Charles Lathrop Pack Forestry Trust \$130,000 to endow a research professorship in forest soils, also from the estate of the late Payne Whitney not less than \$500,000.

Dartmouth received \$373,024 from the estate of Mrs. Helen L. Bullard and from Randolph McNutt \$750,000. Charles F. Brooker left \$150,000 to be divided equally among Yale University, Stanford University, and Dartmouth College. Duke University received \$200,000 toward its endowment fund from C. C. Dula; the late Edward T. Conner of Georgia willed approximately \$1,000,000 to be divided among the collegiate institutions of the state. Dr. James L. Minor gave property valued at \$100,000 to the George Peabody College for Teachers.

George Washington University received a gift

of \$1,000,000 to establish a school of government. This was made by the Supreme Council of Scottish Rite Masons, Southern Jurisdiction.

Annie Downing Wilson of Cambridge left in trust \$150,000, the income of which is to be used by Harvard University to maintain a professorship of applied astronomy. Harvard announced two gifts of \$1,000,000 each, by George F. Baker and William Ziegler, Jr. This money was donated toward maintenance of teaching salaries and endowment of professorships. By the will of the late Nina Lea, Harvard University was to receive \$150,000 to endow professorships. J. D. Rockefeller, Jr., offered a conditional gift of \$100,000 toward the Harvard Law School fund.

Senator James E. McMurray gave \$125,000 toward the building fund for the Illinois Woman's College. The estate of the late Thomas Patterson, at the death of Mrs. Patterson, was to go to the Jefferson Medical College, the hospital of the University of Pennsylvania Museum and School of Industrial Art, and Bryn Mawr Hospital. The estate amounted to \$2,782,003. The Johns Hopkins University and the Peabody Institute were to receive eventually half of the residue of the \$500,000 estate of James Swan Frick. The Johns Hopkins University also received \$750,000 from the General Education Board to establish a medical library.

Keuka College received \$150,000 from the Ball Brothers, glass manufacturers. Lafayette College received from John Markle, \$500,000. Lehigh University received \$1,000,000 from James W. Packard for the erection of an electrical and mechanical laboratory. The Massachusetts Institute of Technology received \$100,000 from Charles Hayden. The institute was also granted \$230,000 for an aeronautical engineering building by the Daniel Guggenheim Fund for the Promotion of Aeronautics. The University of Michigan received a fund of \$225,000 from anonymous donors for a cancer research laboratory. John D. Rockefeller, Jr., gave to the Newton Theological Institution, Newton Centre, Massachusetts, \$100,000.

New York University received \$500,000 from Emily O. Butler. Oberlin College received a gift of \$100,000 from Andrew H. Noth. The medical Department of the University of Oregon was granted \$130,000 by the General Education Board. The University of Pennsylvania received \$800,000 from Eldridge R. Johnson for research in medicine, and from Miss Selena B. McIlhenny \$150,000 for the erection of a memorial dormitory. An anonymous gift of the sum of \$250,000 for building and \$50,000 for an annual income was made for the College of Preachers of the Washington Protestant Episcopal Cathedral, a post-graduate school for clergymen. Princeton received a gift of \$200,000 from Miss Awen-thalyn Jones, for a chair in physics. Robert Forsythe left \$100,000 to the Rensselaer Polytechnic Institute. The University of Rochester received \$2,407,151 from a former mayor of Rochester, James M. Cutler. John F. Lee willed \$376,663 to St. Louis University. Swarthmore College received \$100,000 from Morris L. Clothier. Temple University received \$100,000 from Cyrus H. K. Curtis to be applied to the endowment fund. The University of Texas received a bequest of \$1,125,000 from the late J. R. McDonald to be used for an astronomical observatory. Trinity College, Connecticut, received

a gift of \$150,000 from Charles W. Cook. It also received \$500,000 from William G. Mather for a new chapel.

Tufts College realized \$2,000,000 on Florida land willed the college three years ago by the late Austin B. Fletcher. Tuskegee Institute was to receive \$184,760 from the estate of Mrs. Alice D. Jackson. Union Theological Seminary received \$150,000 from the estate of Emily O. Butler. By the will of James Griswold Wentz of New York City, Urbana University received a bequest of \$100,000. The University of Virginia was to receive \$600,000 by the will of Graham F. Blandy. Washington University at St. Louis received \$376,663 by the will of the late John F. Lee. The General Education Board and Edward Mallinckrodt and family provided \$1,000,000 for the Washington University School of Medicine to use in radiological cancer research. George W. Alden gave \$100,000 to Washburn College at Topeka. Through a gift of \$350,000 from John D. Rockefeller, Jr., Wellesley College was able to build a new dormitory. Joseph B. Reynolds, president of the Kansas City Life Insurance Company, gave \$100,000 to William Jewell College.

General Charles H. Pine gave \$150,000 to Yale University. The university also received two gifts of \$1,000,000 each, one from Mr. George F. Baker and the other from William Ziegler, Jr.; from John W. Sterling \$1,000,000 to establish professorships in biology, paleontology, English history and law; from Charles Cox a gift of \$150,000 toward a new gymnasium; by will of the late Payne Whitney not less than \$300,000; from Charles H. Ludington \$300,000 to establish a department for personnel study; from J. A. Garver a gift of \$100,000 to endow a chair of jurisprudence; from the General Education Board \$850,000 to the Yale School of Medicine and from John A. Hooper of York, Pennsylvania, \$100,000 to establish a professorship of comparative religion in the Yale Divinity School. Nathan Lampport, President of Yeshiva College, New York City, gave \$300,000 toward the \$5,000,000 fund being raised for the college.

New Presidents. During the year the following new presidents of universities and colleges were reported: Averett College elected Dr. J. W. Commack president. Dr. Arthur Stanley Pease was inaugurated president of Amherst College. Dr. Homer LeRoy Shantz was elected president of the University of Arizona. W. W. Trent was elected president of Broadus College to succeed Elkannah Hulley. Dr. Charles J. Turck was elected president of Centre College and Kentucky College for Women, an affiliated organization. Dr. Herbert J. Bergstahler was elected president of Cornell College to succeed Dr. Harlan Updegraff. Dr. Avery Albert Shaw was installed as president of Denison University. Fred M. Hunter became president of the University of Denver. Dr. Earl E. Harper was made president of Evansville College. Ambrose L. Suhrie was elected president of Georgia State College for Women. Franklin College, Indiana, made Homer P. Rainey president. Frank R. Thomas was made president of Fresno State College. Dr. Cloyd Heck Marvin was elected president of George Washington University to succeed Dr. William Mather Lewis. Dr. Alfred F. Hughes took the presidency of Hamline University. Mrs. Alice C. Sie accepted the presidency of Indianapolis

Teachers' College. Dr. Raymond M. Hughes was chosen president of the Iowa College of Agriculture and Mechanic Arts. Dr. James Ephraim Coons became president of Iowa Wesleyan College to succeed Dr. U. S. Smith.

Dr. William Mather Lewis became president of Lafayette College succeeding Dr. John Henry MacCracken. Donald Wilson Miller was elected president of Lees Collegiate Institute. The Rev. William Hallock Johnson, D.D., was installed as the fifth president of Lincoln University, Pa. Long Island University opened for the first time in September with George R. Hardie as president. The Rev. Robert M. Ekelly was appointed president of Loyola College. The Rev. Dr. Charles M. Jacobs was inaugurated president of Lutheran Theological Seminary at Mount Airy, Pa. Dr. George Herman Derry was appointed president of Mary Grove College. Dr. Spright Dowell was elected president of Mercer University at Macon, Georgia. Dr. Roscoe W. Thatcher was installed president of the Massachusetts Agricultural College. Miami University elected A. H. Upham president. Municipal University, Detroit, elected Augustus M. Bratton president. Edward M. Lewis was elected the new president of the University of New Hampshire. Everett C. Herrick was inaugurated president of the Newton Theological Institute. Arthur G. Crane was elected president of the University of Nebraska. Dr. Frederick B. Robinson was made president of the College of the City of New York. J. C. Brown accepted the presidency of Northern Illinois State College.

Dr. Ernest Hatch Wilkins was inaugurated as president of Oberlin College to succeed Dr. Henry Churchill King. Dr. Alvin F. Lewis was elected president of Ogden College, Bowling Green, Kentucky. Dr. Ralph D. Hetzel was inaugurated president of Pennsylvania State College. W. M. Bratton was elected president of Rhinehart College. Dr. Hamilton Holt was made president of Rollins College, Florida. Dr. Alexander C. Robinson became president of the San Francisco Teachers' College. Dr. Ernest James Jaqua was made president of the new Scripps College for Women at Claremont, California. Miss Florence Read was elected president of Spelman College. Shreveport College elected William Garner Burgin as president. Dr. L. B. McMullen was appointed president of State Teachers' College at Billings, Montana. Dr. Harry Yandell Benedict became the new president of the University of Texas. Dr. John Finlayson of Wichita was made chancellor of the University of Tulsa. The Reverend Charles F. Dapp was called to the presidency of Wagner College, Staten Island. Dr. M. Lyle Spencer was elected president of the University of Washington. Dr. Harold Waldstein Foght was elected president of the University of Wichita. Dr. John Roscoe Turner was elected president of West Virginia University.

THE BROOKINGS INSTITUTION. This institution was established in Washington, D. C. Dr. Harold G. Moulton is its president. The board of trustees is composed of prominent men. This institution grew out of research conducted by the Institute of Economics, the Institute of Government Research, and the Robert Brookings Graduate School of Economics and Government. See **BROOKINGS INSTITUTION.**

CENTRES OF NEW YORK UNIVERSITY IN EUROPE. Seven centres of instruction were estab-

lished in Europe by New York University for the benefit of summer students. Language, literature, commerce, or political science could be studied for four or eight points of college credit. The courses were given by American instructors in a European university. Four types of courses were planned for graduate, undergraduate, professional and cultural students.

THE CURTIS INSTITUTE OF MUSIC. Through the gift of Mrs. Mary Louise Curtis Bok the permanent endowment fund of this institution in Philadelphia was increased to \$12,500,000. Josef Hofmann was the new director-in-chief and also continued in charge of the piano department. The sole requirement for admission is that the pupil show a native talent for music, a special aptitude for a certain instrument and certain characteristics that indicate probable success.

HUNTINGTON FOUNDATION FOR HISTORICAL RESEARCH. A trust fund of \$8,000,000 was left by Henry Edwards Huntington to be used exclusively for research in American and English history. The income from this fund is to be used to create fellowships for scholars engaged in historical research, for research by the staff of the Huntington Library and for publication of research findings. Mr. Huntington had previously turned over his famous building near Pasadena to the public and the great library has become a "free research laboratory for the advancement of learning." The building contains very valuable art and literary treasures.

THE JUNIOR COLLEGES. The junior college movement made rapid growth during the last five years. There were about one hundred public junior colleges, double the number reported in 1922, and the enrollments in these had increased 200 per cent. Private junior colleges and those on state foundations increased the number to well over three hundred.

NEW YORK HOSPITAL AND THE CORNELL UNIVERSITY MEDICAL COLLEGE. This hospital and medical college planned to construct a large group of buildings, for a medical centre, near the East River, between Sixty-eighth and Seventieth Streets, New York City. This is near the Rockefeller Institute for Medical Research. It will be necessary to provide over \$60,000,000 to carry out this plan. The General Education Board has given \$7,500,000. The association will receive more than \$10,000,000 by the will of the late Payne Whitney. Dr. George Canby Robinson, dean of the Vanderbilt University Medical School at Nashville, will be the executive director of the controlling organization, to be known as the New York-Cornell Medical College Association, which will operate under a joint administrative board of trustees.

EDUCATIONAL BOARDS AND FOUNDATIONS. *The American Scandinavian Foundation.* Scholarships to the amount of \$70,000 were awarded to American and Scandinavian students by the American Scandinavian Foundation. Studies were pursued in Iceland and Greenland as well as Norway, Sweden and Denmark.

THE INSTITUTE OF INTERNATIONAL EDUCATION. The Institute of International Education reported a large increase in the number of fellowships that had been entrusted to the institute for administration. There were 145 of these which pay tuition, board and lodging, but not traveling expenses. The scholarships were almost equally divided between those for Americans to study abroad and for foreigners to study

in the United States. This is an exchange, as the scholarships for Americans are provided in those countries and the scholarships for foreigners to study in the United States are provided from sources in America.

THE COMMISSION FOR RELIEF IN BELGIUM FELLOWSHIPS. During the fall of 1927, 33 Belgian advanced students were studying in American universities under the auspices of this commission and there were three American fellows doing advanced work in Belgium.

THE COMMONWEALTH FUND FELLOWSHIPS. Commonwealth Fund Fellowships amounting to \$125,000 were awarded to 23 honor graduates of British universities. These men will study for two years in American universities. This is the third group to study and travel in America under the Commonwealth Fund and makes a total of 63 who have held these scholarships. To the 20 annual fellowships three new ones have been added this year for honor graduates of British colonial universities at present studying in Great Britain.

INTERNATIONAL STUDY AND TRAVEL. Not less than six scholarships were arranged by the Travel and Study Committee of the American Council of Education. These were made possible through gifts of \$1000 to \$20,000 from Felix M. Warburg, Mrs. Andrew Carnegie, Mr. Hochschild and Aaron Naumburg. The general purpose in sending college juniors abroad to study is to stimulate broader education as well as acquaintance between American students and those in other countries. This plan has been in operation about four years and is reported as very satisfactory.

THE LAURA SPELMAN ROCKEFELLER FOUNDATION. The report of this Foundation for 1926 showed that appropriations to the amount of \$6,879,384.50 were made. Of this amount \$2,167,855.61 was payable in 1926. The income was \$4,320,712.90. During the year \$1,641,649.27 was appropriated to universities and other agencies both in the United States and abroad for study in social sciences. A total of \$591,000 was appropriated for child study.

SURVEY OF LAND-GRANT COLLEGES. The Bureau of Education and Interior Department were making a survey of land-grant colleges. This survey was authorized by Congress at its last session. The survey, being made of these colleges was a national study of the status, accomplishments and future objectives of the land-grant type of education. An advisory committee of nine was formed and consisted of the following members: The Secretary of the Interior, chairman; the Secretary of Agriculture, Thomas G. Blair, Superintendent of Public Instruction of Illinois, Miss Martha Van Rensselaer, director of the New York State College of Home Economics, Cornell, and the presidents of the following institutions—University of Maryland, the State Agricultural and Mechanical College, South Carolina, the University of Michigan, the Massachusetts Institute of Technology, and the State Agricultural College of Colorado.

UNIVERSITY EXTENSION. See EDUCATION.

UPPER AUSTRIA. A constituent province of the new republic of Austria since the formation of that state, Nov. 12, 1918; formerly a crownland of Austria, before the collapse of the Austro-Hungarian Empire. Area, 4026 square miles; population, according to the census of

923, 876,074. Capital, Linz, with a population of 102,081 in 1923.

UPPER SENEGAL AND NIGER. A colony under the government-general of French West Africa; officially known since Dec. 4, 1920, as French Sudan. See FRENCH SUDAN and FRENCH WEST AFRICA.

UPPER SILESIA. See POLAND.

UR. See ARCHAEOLOGY.

URUGUAY, ú'ru-gwá or óó'róó-gwí. A republic of South America, bounded by Bolivia, Argentina, and Brazil. Capital, Montevideo.

AREA AND POPULATION. Area, 72,153 square miles; population, at the beginning of 1927, was 720,468. The chief cities with their populations on Dec. 31, 1925, were Montevideo, 429,993. Payandu, 24,000; Salto, 24,000; and Mercedes, 16,000. The movement of population in 1925 was: Births, 42,167; deaths, 19,332; marriages, 9363. The immigrants in 1925 numbered 147,305; the emigrants, 161,942. The immigrants came chiefly from Spain, Italy, Brazil, France, Germany, Great Britain, and Argentina.

EDUCATION. During the year 1926, 1112 public primary schools were open throughout the Republic, with 3240 teachers, a total enrollment of 134,228 pupils, and an average daily attendance of 103,164. There were, in addition, 33 night schools for adults, with 308 special instructors and teachers, an enrollment of 7386 students, and an average attendance of 4911; two normal institutes, two schools for deaf-mute children, three open-air schools, one playground, 25 visiting teachers; also school clinics, etc.

PRODUCTION. Uruguay is primarily a pastoral country, 60 per cent of the total area being devoted to the stockraising industry, 20 per cent to mixed farms and ranches, and only 5 per cent to agriculture. Meat packing is the most important industry. Cattle to the number of 689,541, and 1,494,645 sheep were slaughtered in 1927. The total results of the 1926 wool clip were estimated at 117,000 bales. The chief agricultural products grown are wheat, maize, barley, oats, and linseed.

COMMERCE. The total value of Uruguayan foreign trade for the year 1927 was 180,678,065 pesos, of which the exports were 96,674,131 pesos and the imports, 84,003,934 pesos. Listed under general classes, the imports and exports of 1925 and 1926 were as follows:

<i>Classes of commodities</i>	<i>1925</i>	<i>1926</i>
<i>Imports</i>	<i>Pesos</i>	<i>Pesos</i>
Livestock	462,554	289,808
Raw materials	7,826,621	8,141,140
Foodstuffs	13,622,550	14,403,107
Cigars and tobacco	724,823	711,980
Hardware and paper	9,517,858	9,657,254
Farming implements	2,889,670	2,647,004
Dry goods and other merchandise	6,489,878	6,575,702
Musical instruments	71,200	88,800
Fuel	11,026,805	11,440,424
Tanned hides	54,077	61,689
Miscellaneous	19,753,697	19,255,124
Total	72,438,663	78,271,830
<i>Exports</i>		
Livestock products	87,754,624	86,802,946
Agricultural products	8,601,896	5,702,540
Mining products	1,524,116	2,258,925
Products of the hunt and fisheries	881,257	293,665
Miscellaneous articles	460,898	198,137
Ship provisions and supplies	86,724	82,204
Total	98,709,015	94,778,417

FINANCE. To stress the need of fiscal economies, Señor Sosa, of the Uruguayan National Administrative Council, declared toward the end of the year that the national wealth of Uruguay amounted to 3,300,000,000 pesos and the total national debt to 284,000,000 pesos, of which 64,000,000 pesos represented fiduciary currency in circulation. The country's national wealth he listed as follows:

	<i>Millions of pesos</i>
Urban, suburban, and rural property	1,850
Livestock (according to a special table of valuations)	346
Port works, roads, agricultural machinery, production, etc.	400
Railroads and tramways	80
Industrial domain of the State (capital of State-owned electric plants, capital of banks, etc.) ..	70
Working capital in commerce and industry ..	95
Gold in the Bank of the Republic	56
Government-owned property	103
Other items	300
Total	3,300

In the last 20 years the national debt has increased 100,000,000 pesos and the national budget of expenditures for 1927 reached 52,000,000 pesos, according to Mr. Sosa. Since 1902, he declared, budgetary expenditures have more than trebled.

COMMUNICATIONS. In 1925, 6639 steamers of 12,205,638 tons and 4731 sailing vessels of 1,023,261 tons entered the ports of Uruguay and 6565 steamers of 12,131,591 tons and 4803 sailing vessels of 1,034,749 tons cleared. There are 1585 miles of railways in the country.

GOVERNMENT. Under the constitution of Jan. 3, 1918, legislative power is vested in a parliament of two houses, the chamber of representatives elected by universal suffrage of males over 18 years of age, and the senate chosen by an electoral college which is elected by popular vote. Executive power is vested in the President, elected by direct popular vote, and a national administrative council of nine members. President in 1927, Dr. Juan Campisteguy, elected for the term Mar. 1, 1927-Feb. 28, 1931.

HISTORY. Dr. Campisteguy, successful in the elections of November, 1926, was inaugurated president of the republic on March 1 for a four-year term. The new president, a journalist by profession (the founder of the newspaper *El Día*), had seen considerable service in the government, at one time serving as secretary of the treasury and at another as minister of the interior. The following were chosen as Ministers in the Cabinet of Dr. Juan Campisteguy: Don Rufino T. Domínguez, Minister of Foreign Affairs; General Estanislao Mendoza y Durán, Minister of War and Marine; Dr. Eugenio J. Lagarmilla, Minister of the Interior; Dr. Pablo Minelli, Minister of the Treasury; Don Enrique Rodríguez Fabregat, Minister of Education; Dr. Eduardo Acevedo Alvarez, Minister of Industry; Victor Benavidez, Minister of Public Works.

UTAH. **POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 449,896. The estimated population on July 1, 1927, was 522,000. The capital is Salt Lake City.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1927	644,000	1,574,000 *	14,311,000
	1926	637,000	1,818,000 *	14,384,000
Wheat, winter	1927	152,000	2,888,000	2,946,000
	1926	149,000	3,129,000	3,848,000
Wheat, spring	1927	90,000	2,790,000	2,846,000
	1926	88,000	2,376,000	2,424,000
Potatoes	1927	22,000	2,970,000	2,228,000
	1926	17,000	2,465,000	2,588,000
Oats	1927	51,000	2,142,000	1,285,000
	1926	54,000	2,160,000	1,296,000
Barley	1927	30,000	1,410,000	1,072,000
	1926	20,000	800,000	576,000

* tons.

MINERAL PRODUCTION. Copper, lead and silver, the three leading mineral products, furnished three-fourths of the total production of the mineral industry of the State in 1925 as reckoned by value. Utah ranked first among the States in that year in production of silver, second as to lead, third as to copper. In 1926, it exceeded Montana in copper production and was surpassed only by Arizona. The metal production of the State was as follows: copper, 257,464,482 pounds in 1926, 236,486,450 pounds in 1925; lead, 205,270,025 pounds in 1926, 306,669,824 pounds in 1925; zinc, 95,179,380 pounds in 1926, 52,611,732 pounds in 1925; gold, 182,703 fine ounces in 1926, 177,803 fine ounces in 1925; silver, 19,358,581 fine ounces in 1926, 21,276,689 fine ounces in 1925. The aggregate value of production of these five metals for 1926 was \$82,662,884; and \$82,701,394 for 1925. Iron ore and pig iron were produced on a minor scale. Outside of the metals, coal was the chief element in the mineral industry. Coal production in 1926, as estimated from shipments, was 4,434,000 short tons in 1926; in 1925, 4,690,842 tons valued at \$11,091,000. Considerable native asphalt, salt and arsenious oxide are produced. The total value of the State's mineral production in 1925, duplications eliminated, was \$100,275,442; in 1924, \$84,356,626.

The mines of Utah in 1927 produced gold, silver, copper, lead, and zinc valued at \$74,348,000, a decrease of about \$3,815,000 from the output of 1926, according to estimates of the U. S. Bureau of Mines. A large increase was reported in gold and slight ones in copper, lead, and zinc, but the output of silver was less than in 1926. The smelting plants of Murray, Midvale, Garfield, and International were active, and several new and important producing mines were added to the list for 1927. A marked decrease, however, in the average metal prices of silver, copper, lead, and zinc seriously affected many of the large operators. Utah was first in the United States in the production of silver, second in copper after Arizona, and second in lead after Missouri. The custom flotation mills at International, Midvale, and Bauer were operated the entire year, and improved milling plants were run at Park City and Bingham, but the Chief Consolidated flotation plant at Eureka was idle most of the year. The gold production increased considerably from a value of \$3,778,046 in 1926 to about \$3,986,300 in 1927. Practically all the gold was recovered from ores and concentrates smelted. The silver output decreased to 18,800,000 ounces in 1927, but the production was 7,700,000 ounces more than that of Montana, which was second in silver production in the United States. The value of the silver output decreased from \$12,079,755 to \$10,659,600, or

nearly 12 per cent, due in part to the decrease in the average price. The production of copper increased to 258,300,000 pounds in 1927, but the value decreased from \$36,045,027 to \$33,579,000. The final figures may show some variation, possibly a slight decrease, but Utah was second in copper production after Arizona and was far above Montana in 1927. Lead output increased to 297,900,000 pounds in 1927, but the value decreased from \$23,621,602 to \$20,107,000 as the average price declined. The lead smelting plants were active, but not worked to capacity, although bullion shipments from International were increased. The zinc recovered chiefly from concentrate leached or smelted probably increased slightly to about 95,800,000 pounds in 1927. As the average price was much less than that of 1926, the value decreased from \$7,138,454 to \$6,016,240.

In 1927 the mines of Utah produced about 16,036,000 tons of ore, an increase from 15,856,144 tons in 1926. Of this total the Bingham district produced about 14,565,400 tons as compared with 14,521,472 tons in 1926. The estimated production of the district was 122,510 ounces of gold, 3,447,000 ounces of silver, 248,777,000 pounds of copper, 103,871,000 pounds of lead, and 48,290,000 pounds of zinc.

FINANCE. As reported by the U. S. Department of Commerce, payments for the maintenance and operation of general departments of the State government in the fiscal year ending June 30, 1926, were \$7,430,514; their rate per capita was \$14.60. They included \$3,649,503 apportioned for education. Totals not included in the above, of \$455,170 in interest and of \$1,774,974 in permanent improvement outlay, brought the aggregate of State expenditure to \$9,660,658. Of this, \$2,235,392 was for highways; \$660,912 being for maintenance and \$1,574,480 for construction.

Revenue receipts were \$11,055,923; or per capita, \$21.72. Of the total, property and special taxes yielded 50.1 per cent, attaining a rate per capita of \$10.87. Earnings of departments and compensation paid the State for officials' services furnished 6.4 per cent of revenue; 19.7 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from taxes on cigarettes and on gasoline.

Net State indebtedness on June 30, 1926, was \$7,183,500, or \$14.11 per capita. Property subject to ad valorem taxation bore a valuation of \$668,611,580. State taxes levied thereon were \$5,034,612, or \$9.89 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 2,190.49. No additional trackage was built in 1927.

EDUCATION. Work was done to systematize and unify the courses in senior and junior high schools, and manuals on the organization and administration of such schools were published. There was active promotion of the view that tax laws should be altered to provide greater State aid for the school districts unable to meet the expenses of a minimum standard of school education. The school population of the State, according to figures rendered in 1927, was 143,811. There were enrolled in the public schools 141,483 pupils, of whom 114,309 were in the elementary schools and 27,174 in high schools. Expenditure for public education in the State

was \$11,070,674. Salaries of teachers averaged \$1,280, those of principals and supervisors included.

CHARITIES AND CORRECTIONS. The State government had no single unit for the control of its welfare institutions or activities. The number of patients in the State hospitals for the insane on Jan. 1, 1927, according to the figures of the Department of Commerce, was 781, and there had been admitted to this hospital, in 1926, 173 cases not previously treated; in the State prison on Jan. 1, 1927, were 210 convicts, and the number of admittances in 1926 was 157.

LEGISLATION. The Legislature convened in regular biennial session January 10. The State Senate voted against a bill to repeal the State's ratification of the seven-State compact for the disposal of water and power to be derived from the Colorado River.

POLITICAL AND OTHER EVENTS. Charges of shortage were made in August against the Treasurer of Salt Lake County, and certain of his deputies. The Utah State Farm Bureau with the aid of other groups in the State formed a commission to determine the facts bearing on the interest of the State in the development of the Colorado River water and power resources. This commission issued a statement on the subject, in October, which was adverse to the contention of Los Angeles, and which was vigorously controverted by the Los Angeles engineers.

OFFICERS. Governor, George H. Dern; Secretary of State, H. E. Crockett; Treasurer, John Walker; Auditor, John F. Holden; Attorney-General, Harvey H. Cluff; Superintendent of Public Instruction, C. N. Jensen.

JUDICIARY. Supreme Court, Chief Justice, Samuel R. Thurman; Associate Justices, Elias Hansen, James W. Cherry, N. D. Straup, Valentine Gideon.

UTAH, UNIVERSITY OF. A State institution of higher education at Salt Lake City, founded in 1850. The total enrollment for the autumn of 1927 was 2754, and for the summer session of the same year, 913. The teaching faculty, exclusive of 11 on leave of absence studying at other institutions, numbered 158. The productive funds of the university amounted to \$801,776, and the income for 1926-27 was \$739,961.57. The library contained 90,164 volumes and 27,406 pamphlets. President, George Thomas, Ph.D.

VANADIUM. The U. S. Bureau of Mines estimated the world's production of vanadium contained in ore and concentrates in 1926 at 3,464,585 pounds, valued at \$1,643,358, of which 661,360 pounds were produced in the United States and 2,497,000 pounds valued at \$1,024,000 came from Peru and 50,625 pounds valued at \$21,860 from Northern Rhodesia, while 255,600 pounds valued at \$233,498 were exports from British Southwest Africa. The vanadium ores produced in the United States in 1926 were estimated at 43,200,000 pounds with an estimated vanadium content of 661,360 pounds value at \$314,000, while the imports from Peru carried an estimated content of 1,831,600 pounds of vanadium, valued at \$863,551; small quantities were also imported from Europe and British South Africa. In 1927 the United States imported 12,398,000 pounds of vanadium ores with an estimated value of \$561,051, as against 14,942,000 pounds with a value of \$914,114 imported in 1926.

VANDERBILT UNIVERSITY. A non-sectarian coeducational institution of higher learning at Nashville, Tenn.; founded in 1873. In the autumn term of 1927, 1249 students were enrolled, distributed as follows: graduate students, 102; college of arts and science, 675; school of engineering, 132; school of religion, 49; school of medicine, 189; school of law, 102, which was 32 less than the 1926 enrollment, due to the enforcement of higher admission requirements in 1927. No summer session was held. The faculty, exclusive of administrative officers, librarians, and assistants, numbered 165. Productive funds of the University amounted to \$9,000,000, the annual income was about \$800,000, and the value of the University's property was estimated at approximately \$5,650,000. The library contained 126,000 volumes. Chancellor, James H. Kirkland, Ph.D., LL.D., D.C.L.

VAN DYCK, FRANCIS CUYLER. An American educator, died at Highland Park, N. J., April 11. He was born at Coxsackie, N. Y., on June 3, 1844. After passing his freshman year at Williams College he graduated from Rutgers in 1865. A year after graduating he became instructor in physics at Rutgers, and remained continuously an active member of the faculty until his retirement in 1917 as a professor emeritus.

VARE, WILLIAM S. See UNITED STATES under *Seventieth Congress, First Session.*

VASSAR COLLEGE. A non-sectarian institution for the higher education of women at Poughkeepsie, N. Y.; founded in 1861. The enrollment for the autumn of 1927 was 1140. For the year 1927-28 the teaching staff had 151 members. The endowment, including fellowships and scholarships, amounted to \$6,498,762.30, and the income for the year to \$364,178.87. There were 155,800 volumes in the library. The outstanding achievement of the year in the academic life of the college was the adoption by the faculty of a new curriculum, which (1) diminishes, and limits ordinarily to the first year, the fixed requirements; (2) helps the student in her first years to find a purpose; (3) helps her to develop her field of major interest. President, Henry Noble MacCracken, Ph.D., LL.D., LL.D.

VATICAN. See ROMAN CATHOLIC CHURCH.

VEGETABLES. See HORTICULTURE.

VENEZUELA, vén'ē-zwē'lā, *Sp. pron.* vā'nā-thwē'lā or *Amer. Sp. pron.* vā'nā-swē'lā. A republic on the northern coast of South America, bordering on the Caribbean Sea and lying between Colombia on the west, Brazil on the south and British Guiana on the east. Capital, Caracas.

AREA AND POPULATION. Venezuela has an area of 393,874 square miles; population, according to the census of December, 1920, 2,411,952; estimated, Dec. 31, 1924, 2,563,334. An official census was taken early in 1926 but complete results were not published by the end of 1927. The population of Caracas in 1920 was 92,212, and of other large cities: Maracaibo, 46,706; Valencia, 29,466; Barquisimeto, 23,943; and San Cristóbal, 21,385. Because of the tremendous activity in the oil fields around Maracaibo, the population has grown by leaps and bounds, and was estimated at 100,000 in 1926. Official vital statistics for 1926 showed 17,334 marriages, 91,648 births, 66,092 deaths, 21,672 immigrants and 16,552 emigrants.

EDUCATION. School registration in the various types of schools was as follows in the month

of December, 1926: Government primary schools, 63,747, and average attendance, 45,847; 341 private schools, 15,302; 236 municipal schools, 10,473; 254 state schools, 9726; special schools, 1618; secondary schools, 588; higher schools, 716.

PRODUCTION. Venezuela falls naturally into three zones, the agricultural, the pastoral, and the forest. In the agricultural zone are grown coffee, cacao, sugar-cane, cotton, beans, etc. The forests abound with tropical products such as caoutchouc, balata, vanilla, tonka beans, copaiba, etc. The area under coffee has been estimated at 180,000 to 200,000 acres, and the annual output of sugar at 60,000 tons. The country is rich in minerals, gold, silver, copper, coal, and salt being mined on a commercial scale. The country is also one of the richest oil countries in the world and promises to become one of the largest producers. The monthly production for 1927 averaged 4,517,367 barrels, with a total of 27,104,203 for the first six months. The production of Venezuela since the beginning of operations to July 1, 1927, totaled 102,360,872 barrels. More than 50 per cent of this total was produced in the eighteen months preceding mid-1927. These figures give an idea of oil-field development in the Maracaibo Lake Basin during the past two years.

COMMERCE. Foreign trade for 1926 included general imports valued at \$70,027,000, and general exports of \$75,304,000. These figures include reexports, amounting roughly to about one per cent, and bullion and specie.

FINANCE. The total government receipts for the year 1926 were 172,444,068 bolivars, or an increase of 25,171,213 bolivars over those for 1925. The national debt of Venezuela as of Dec. 31, 1926, amounts to 85,108,452 bolivars, of which 36,239,441 bolivars represented internal debt and 48,869,011 bolivars foreign debt.

COMMUNICATIONS. There are approximately 740 miles of railroad, including the roads used in mining and on sugar plantations.

GOVERNMENT. According to the constitution of June 24, 1925, the executive power is vested in the president, who acts through a responsible ministry, and who is elected by congress for seven years; and the legislative power is vested in the congress, consisting of a senate and a chamber of deputies, the former of 40 members (two from each State) elected for three years, and the latter of one deputy for every 35,000 inhabitants and one more for an excess of 15,000, also elected for three years. President in 1927, General Juan Vicente Gomez (elected May 3, 1922, for the period 1922-1929).

VERMONT. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 352,428. No latter estimate had been prepared. The capital is Montpelier.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops in 1926 and 1927:

Crop	Year	Acreage	Prod., bu.	Value
Hay	1927	935,000	1,421,000*	\$16,581,000
	1926	939,000	1,475,000*	21,324,000
Corn	1927	84,000	3,276,000	3,440,000
	1926	84,000	3,612,000	3,481,000
Potatoes	1927	21,000	3,255,000	4,069,000
	1926	20,000	3,100,000	4,340,000
Oats	1927	38,000	3,287,000	2,104,000
	1926	32,000	3,116,000	1,870,000

* tons.

See AGRICULTURE; FLOODS.

MINERAL PRODUCTION. The total mineral production of the state in 1925, after elimination of duplications, was \$14,408,933; in 1924, \$14,549,420. Of this total the stone industry, particularly the quarrying of granite and marble, furnished the greater part, while slate provided most of the remainder. The production of stone was 283,030 short tons in 1925; in 1924, 295,880 tons. The value of the product was \$8,958,846 for 1925 and for 1924, \$9,066,073. Slate sold by producers had a total value of \$4,267,041 for 1926 and for 1925 of \$3,963,025. Lime and talc were both produced in the state in considerable quantities.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$1,642,510; their rate per capita was \$13.17. They included \$506,455 apportioned for education. Totals not included above, of \$91,272 in interest and of \$1,801,759 in permanent improvement outlays, brought the aggregate of State expenditure to \$6,035,541. Of this, \$2,664,806 was for highways; \$1,513,140 being for maintenance and \$1,151,666 for construction.

Revenue receipts were \$6,384,992; or per capita, \$18.12. Of their total, property and special taxes yielded 38.8 per cent, attaining the per capita rate of \$7.03. Earnings of departments and compensation paid the State for officials' services furnished 7.1 per cent of revenue, while 40.3 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a gasoline sales tax, increased by the Legislature from 2 to 3 cents per gallon.

Net State indebtedness on June 30, 1926, was \$1,753,532, or \$4.98 per capita. Property subject to ad valorem taxation bore a valuation of \$317,111,848. State taxes levied thereon were \$1,591,935, or \$4.52 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 1,056.82. No trackage was built in 1927.

EDUCATION. According to Commissioner of Education Dempsey, about one-third of the rural and village schools had been made to conform to the State standard by the end of the year. The number of standard normal school graduates among the teachers made a noteworthy increase. The school population of the State in 1927 was reckoned at 76,500. There were enrolled in the public schools in that year 64,030 pupils, of whom 52,166 were in the elementary schools and 11,864 in high schools. Expenditures for public school education in the State totaled \$4,747,028.

CHARITIES AND CORRECTIONS. The State Department of Public Welfare, as operating in 1927, combined the functions of a board of charities and probation and of a department of institutions. It handled institutional work, child care, mothers' pensions, probation, parole, poor-house inspection and State aid to tuberculous, deaf and blind persons. It had under its control the State institutions. These and their populations were: Vermont State Hospital, Waterbury, 870; Vermont Industrial School, Vergennes, approximately 234; State School for the Feeble Minded, Brandon, 260; Vermont Sanatorium (for the indigent tuberculous), Pittsford, about 60; Women's Prison and House of Correction, Rutland, about 30; State Prison and House of Correction, Windsor, 340. Patients were also main-

lined at State expense in a hospital at Brattleboro to the number of some 330. The Legislature authorized a department survey of the blind in the State. State patients suffering from mental disease numbered 835 on Jan. 1, 1927, according to figures of the U. S. Department of Commerce.

LEGISLATION. The Legislature convened in regular biennial session in January. It passed revisions for the construction in the ensuing two years of about 100 miles of State hard-surface road, thus taking an initial step in a policy of improving the system of gravel roads, the State having built only some 20 miles of surface road. An act was passed to allow the investment of deposits of the State's savings banks in first mortgages on Vermont mines, quarries and timberlands, and Vermont industrial plants, and in bonds of towns, cities and school districts, of over 5000 population, in seven added States of the Union. To meet the need for the restoration of public improvements damaged or destroyed by the floods of the first week of November, the Legislature was summoned in special session by Governor Weeks. It convened November 30, and passed a measure to authorize the issue of bonds to the total principal sum of \$8,500,000, for the cost of restoring, at the sole expense of the State, damaged highways and bridges. By the terms of the act, the cost of repairs and replacements of highways and bridges damaged in the floods was placed on the State even in cases where such cost would normally fall on a municipality. The Legislature also authorized an Emergency Board to borrow up to \$1,500,000 on the credit of the State in order to obtain funds such as might be required for the relief of flood sufferers.

POLITICAL AND OTHER EVENTS. Governor John E. Weeks was inaugurated January 6. In his inaugural address he recommended among other things more district schools in rural sections of the State, the adoption of a definite plan of highway improvement, the reforestation of waste land, publicity for the attractions of the State and the development of its fish and game possibilities. Extraordinarily heavy rains brought down floods in the first week of November particularly in the Winooski River, which attained a reported height of 27 feet, or 14 feet in excess of the previous record, at the crest of the dam in Winooski Gorge. The loss of life in the Winooski Valley was 55 and elsewhere 29, making a total from all causes of 84 deaths; and 23 manufacturing plants reported on November 11 damages in excess of \$2,800,000. Great damage was done to roads and bridges and the regular communications with some portions of the State were cut off for a number of days. A 460-foot steel bridge on the Rutland Railroad route from New York to Montreal, crossing the Winooski, was swept away, and was replaced with a temporary structure two weeks later. Lieutenant Governor S. Hollister Jackson lost his life in the floods. A severe financial sufferer, the Central Vermont Railroad was thrown into receivership December 12, by action of the Canadian National Railways, the controlling company. Damage done by the flood within the territory of the State, according to report of an estimate submitted to President Coolidge on behalf of Governor Weeks, reached the total of \$30,000,000. See **FLOODS.**

OFFICERS. Governor, John E. Weeks; Lieutenant Governor, S. Hollister Jackson (died

November, 1927); Secretary of State, Rawson C. Myrick; Treasurer, Thomas H. Cave; Auditor, Benjamin Gates; Attorney General, J. Ward Carver; Commissioner of Education, C. H. Dempsey.

JUDICIARY. Supreme Court: Chief Justice, John H. Watson; Associate Justices, George M. Powers, Leighton P. Slack, Sherman R. Moulton and Harrie B. Chase (appointed September, 1927, to succeed Frank L. Fish, deceased).

VERMONT, UNIVERSITY OF. An endowed institution of higher education at Burlington, Vt., receiving some State aid; founded by Ira Allen in 1791. The 1927 autumn enrollment was 1360, of whom 745 were men and 615 women. This number was distributed as follows: arts and sciences, 819; medicine, 130; engineering 152; agriculture, 120; graduate students, 10; two-year State teacher-training course, 129. There were 150 members on the faculty. The endowment amounted to approximately \$2,000,000 and the income for the year to \$850,000. The library contained 125,000 volumes. President, Guy W. Bailey, LL.D.

VETERANS' BUREAU. See **UNITED STATES.**

VETERINARY MEDICINE. The year 1927 saw no new serious foreign livestock malady gaining entrance into the United States as in the few years preceding, and was marked by the betterment of the livestock industry through disease control, and particularly through the eradication of tuberculosis.

LIVESTOCK TUBERCULOSIS ERADICATION. Excellent progress was made in the coöperative campaign to eradicate tuberculosis from the domestic livestock. The support given to it included an increase of nearly \$1,000,000 in the Federal appropriation for the work, or a total of nearly \$6,000,000. This was supplemented by combined State appropriations of about thirteen million dollars. As a result of the work conducted, by November, 144,809 herds with 1,997,517 head had been accredited as tuberculosis free; there were 2,014,940 herds with 18,975,510 head under supervision, and 398,047 herds with 4,166,738 head on the waiting list. At that time there were 418 modified accredited counties. The work suffered a serious loss in the death of Dr. J. A. Kiernan on December 13, at the age of 54 years, who had been in charge from the beginning, in 1917.

HOG CHOLERA CONTROL. The unusual prevalence of hog cholera during the fall and winter of 1926-27 resulted in an output of anti-hog-cholera serum considerably exceeding a billion cubic centimeters, or more than twice that of the preceding year and fifty per cent. more than in any previous year. The field control of outbreaks demonstrated the effectiveness of the preventive-serum treatment and also the need for placing primary reliance on this method of preventing heavy losses.

CATTLE TICK ERADICATION. The cloud of misfortune that visited tick-infested areas in the Mississippi valley in the great overflow had a silver lining in it in that it forced the removal of all cattle, while the submergence and burial under a deposit of silt destroyed the ticks. This was to be taken advantage of by restocking the flooded areas with tick-free cattle. The work resulted in a steady progress in eradication,

twelve entire counties and five parts of counties having been released as tick-free. It was necessary, however, to quarantaine one parish and one county and parts of two parishes. The principal progress was made in Texas, Arkansas, Florida, and Virginia. A total of 737 counties had been released up to July 1 as tick-free, leaving 248 still under quarantine.

DOURINE ERADICATION. Good progress was made in dourine eradication work conducted in cooperation with State livestock officials and the Office of Indian Affairs. In Montana a few cases were detected in a small centre of infection discovered the preceding year. Adequate funds permitted extensive testing on the Navajo Indian Reservation in Arizona where dourine has existed rather extensively among Indian horses. Of the 9364 animals whose blood was tested 703 were found infected.

SCABIES ERADICATION. In the eradication work with sheep scabies conducted in cooperation with the State officials 530,842 sheep were found infected and were dipped, or 45 per cent less than in the preceding year. Increased infection was reported only in Colorado, Nebraska, and Utah. In the cattle scabies eradication work 136,448 head were found to be infected, a considerable reduction from the preceding year. The disease was somewhat more prevalent in Oklahoma, Texas, and Washington.

INFECTIOUS ABORTION OF LIVESTOCK. This disease continued to hold first place in the investigation of livestock diseases. Immunity work with the live virus was carried on in several States, the results obtained lending some encouragement to continue. The regular use in the fall of a bacterin prevented abortion in mares in control work in Kentucky. In studies in Arkansas the abortion organism failed to produce aggressins. An accurate rapid method for performing the agglutination test for the infection was perfected in Michigan. Studies of the tenacity of the organism in Washington demonstrated a resistance to temperatures from below freezing to 80° F. for as long as 87 days. Herds in a number of States were successfully freed from the disease by isolation of the reactors to the agglutination test, and sanitation. This was accomplished in Georgia in less than two years without selling the reactors, from a beef herd in Colorado in 10.5 months, and from a dairy herd in 18.5 months. In Connecticut the disease was eliminated from 15 of 40 herds averaging 30 head in about two years. Experimental work with a clean and an infected herd in Minnesota kept in barns 75 feet apart and tended by the same man indicated that it is feasible for a breeder to maintain a clean and an infected herd.

That the organism occurring in milk from infected cows may at times be the cause of an undulant fever in man was evidenced by the increasing number of cases reported during the year.

FOOT-AND-MOUTH DISEASE. There was no outbreak of this disease in the United States during the year, the last known diseased herd in the outbreak in Texas having been destroyed on Oct. 15, 1926. New centres of infection continued to be discovered in Great Britain, where up to December 64 outbreaks had been confirmed involving 16 counties and the slaughter of 1981 cattle, 1884 sheep, 1172 pigs, and two goats.

ROUF, POX, AND DIPHTHERIA OF POULTRY. An active pox virus used on the range in Oregon to immunize chickens was found to control the disease satisfactorily in the laying house. Fowls vaccinated with the active virus when four months of age were immune to experimental inoculation nearly eleven months later. The use of autogenous bacterins for fowl pox in Massachusetts when administered in the early stages of the disease caused a general improvement in the health of the birds. Several reports were made abroad of the successful protection of poultry against pox by the use of "anti-diphtherin," a commercial virus prepared in Holland. Pandit in India reported finding the virus of contagious epithelioma of fowls when passed in succession on calves and monkeys to be cultivated ultimately into vaccinia virus.

BACILLARY WHITE DIARRHEA OF THE FOWL. Investigation on bacillary white diarrhea continued to hold first place in the field of avian pathology, evidencing the great importance of the disease to the poultry industry. A rapid method was perfected in Virginia for making the agglutination test for detection of the infection. It was found in North Carolina that the serum from reacting birds can be kept frozen for more than seven months and fully retain its power of agglutination. A method of eliminating the cloudy reaction, perfected in Michigan, consists in the use of an antigen containing 1 cc. of normal sodium hydrate to 100 cc. of antigen. Studies in Rhode Island led to the conclusion that high temperatures are unfavorable for gas production by the causative organism, and that the lack of gas formation is a result of such inhibition. It was found in Pennsylvania that strains of the organism having a high negative electrical charge were agglutinated with difficulty while those carrying a low charge were agglutinated with ease. The use in the antigen of 0.1 per cent formalin as a preservative was found in California to eliminate the cloudy reactions which occurred when the phenolized antigen was used. It was found in Virginia that the agglutination reaction following vaccination for fowl typhoid is transitory. Investigators in North Carolina and California found that infected hens may react intermittently and lay infected eggs, probably never recovering from the disease. The percentage of infected eggs laid by reacting hens was 7.31 in heavy breeds and 5.23 in Leghorns, the percentage of egg infection rising as production increased.

The work of the year indicated that the intradermal or pullorin test was becoming sufficiently perfected to be useful in the detection of infected birds. Negative control birds placed with reactors in North Carolina failed to become infected within a period of 15 months, as determined by the agglutination test. It was found by Bunyes that the infection in adult hens and pullets may assume the character of a bacteremia with primary lesions of peritonitis and a salpingitis. It was estimated in Kansas that the average fertility for nonreactors is 90 per cent and for reactors 70 per cent, the hatchability of fertile eggs for nonreactors 70 per cent and for reactors 58 per cent, the livability of chicks from nonreactors 90 per cent and for reactors 50 per cent. The chances of transmission of the infection from adult to adult was found in North Carolina to be remote if the ground had not

been previously occupied by infected chicks. The ingestion of feed containing droppings of infected hens by day-old chicks failed to transmit the disease to them in Indiana. Doyle in England was led to conclude that adult cock birds do not readily contract the disease from contact with infected hens. Trap-nest records kept in North Carolina led to the conclusion that the keeping of heavily infected birds is not economical.

FOWL TYPHOID. The work of the year further demonstrated the close relationship of the fowl typhoid organism and the bacillary white diarrhoea organism, both biochemically and pathologically, and suggested that the latter may be the former in the making. Studies in California showed that the fowl typhoid organism like that of bacillary white diarrhoea may be transmitted directly to chicks through eggs laid by infected hens. It was found that both acute infection of chicks and chronic infection of the ovary of the hen are caused by the fowl typhoid organism. The degree of acidity of the soil was found in New Jersey to be an important factor in the destruction of this organism.

PARASITES AND PARASITICIDES. In studies carried on in Wales it was found that starlings were more important distributors of gape-worms of poultry than were turkeys, and that other wild birds played a similar part. The coccidium affecting turkeys was found by Tyzzer to represent a form distant from the two attacking the chicken, he gave the name *Eimeria meleagridis* to the former. The same investigator found the parasite causing blackhead in turkeys to occur in and be transmitted by the eggs of the cecum worm. Tetrachlorethylene was found by Hanson to be as effective in the removal of hookworms and ascarids in foxes as is carbon tetrachloride. The infestation of lambs with stomach worms was found in Ohio to be reduced 99.6 per cent by the administration of copper sulphate solution at regular monthly intervals. In Illinois, at Chicago, eggs of the cecum worm of poultry were in normal condition after burial for 8 months just beneath the surface of the soil. Eggs of the roundworm of swine survived exposure to outdoor conditions with temperatures varying from -16 to 94° F. for more than 301 days, and a few showed live embryos at the end of a year.

BIBLIOGRAPHY. Books of the year include: K. Glässer, *Die Krankheiten des Schweines* (Hanover, 1927, 3. ed. [rev. and enl.]); J. Hammond, *The Physiology of Reproduction in the Cow* (London, 1927); A. Honeker and J. Fortner, *Die Bösartige Maul- und Klauenseuche bei Ziegen* (Hanover, 1927); B. F. Kaupp, *Poultry Diseases, Including Diseases of Other Domesticated Birds, with a Chapter on the Anatomy of the Fowl* (Chicago, 1927, 4th ed. [rev. and enl.]); R. A. Kelsor, *Manual of Veterinary Bacteriology* (Baltimore, 1927); G. Marotel, *Parasitologie Vétérinaire* (Paris, 1927); F. Smith, *A History of the Royal Army Veterinary Corps, 1796-1919* (London, 1927); E. Weber, *Die Krankheiten des Rindes* (Berlin, 1927).

VICTORIA. A state of the Australian Commonwealth, situated in the southeastern part of the island continent. Area, 87,884 square miles; population, according to the census of 1921, 1,531,280; estimated June 30, 1927, 1,721,093. Capital, Melbourne, with an estimated population, including suburbs, on Dec. 31, 1925, of 912,-

130. The other large cities, with their populations on that date, were Ballarat, 40,090; Geelong, 39,100; Bendigo, 33,700. The movement of population in 1925 was: Births, 35,922; deaths, 15,837; marriages, 13,370; immigration (by sea), 77,487; emigration (by sea), 64,276.

Education is compulsory for children between the ages of six and 14. In 1924 there were 2503 government schools, with 6977 teachers, a total enrollment of 254,144 pupils, and an average daily attendance of 171,382. The area and yield of the principal crops in 1926 were: Wheat, 2,513,000 acres, 29,256,000 bushels; oats, 438,000 acres, 4,998,000 bushels; barley, 103,000 acres, 1,775,000 bushels; potatoes, 63,000 acres, 161,000 tons; hay, 1,014,000 acres, 929,000 tons; vines, 41,252 acres, 1,368,765 gallons of wine. The wool industry is of great importance. At the end of March, 1926, there were 13,740,000 sheep, and the value of the wool clip in the preceding year was £11,444,240, for 106,787,897 pounds. The mineral resources are abundant, especially coal and gold ores. The output of the former in 1925 was 534,246 tons, valued at £596,117; of the latter, 47,296 fine ounces, valued at £200,958. The value of the total quantity of gold obtained from 1851 to 1925 was estimated at £302,339,954.

The number of factories in the state increased at the rate of approximately 2000 a year up to 1924-25, when the total reached 7425. At the end of 1925-26 only 7461 were reported, an increase of only 36 during the 12 months. The number of employees decreased from 154,158 on June 30, 1925, to 152,927 on June 30, 1926, and the capital value of land, machinery, and buildings declined from £61,031,975 to £60,395,500. Working costs were higher. The value of production rose from £118,177,398 to £119,986,439. Establishments manufacturing food and drinks reported an output valued at £36,464,761, and next in importance came clothing and textiles industries, £25,312,069, while the metal industry was £15,569,040. During recent years much progress has been made in the use of up-to-date machinery.

In 1925-26 the total value of overseas imports was £50,319,324; of overseas exports, £32,957,263. State revenues in 1925-26 amounted to £23,820,402, a decrease of £171,006 as compared with 1924-25. Victoria has a debt, incurred in the construction of public works, which amounted, on June 30, 1925, to £131,169,565. The total railway mileage in 1925-26 was 4888 as compared with 4807 in 1924-25.

The executive power is vested in a governor, acting through a responsible ministry, and the legislative power in a parliament of two houses; namely, the legislative council of 34 members elected for six years and subject to property qualifications, and a legislative assembly of 65 members elected for three years (unless sooner dissolved) by universal male and female suffrage. The governor in 1927 was Lieut. Col. Lord Arthur H. T. Somers; Premier, Minister of Water Supply, and Minister of Railways, J. Allan.

As a result of the elections of April 16, Premier Allan, the Country-Nationalist leader, resigned and was succeeded by E. J. Hogan, the leader of the Labor opposition. Mr. Hogan was compelled to depend on non-labor votes for his majority inasmuch as there were only 28 Labor members in a house of 65.

VIERA, FELICIANO. Ex-president of Uruguay, died at Montevideo on November 11. He was born in Salto in 1872, and received his education at the University of Montevideo. In 1911 he was appointed Minister of the Interior, at that time the most important position in the administration. He held the post until 1915 when the General Assembly appointed him president of the Republic. While he was president the public peace was never disturbed, notwithstanding many serious and complicated problems that presented themselves to him for solution. In 1910 he transmitted the presidential office to his successor and assumed the post of president of committee in the National Council.

VIOLINISTS. See MUSIC.

VIRGINIA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,309,187. The estimated population on July 1, 1927, was 2,546,000. The capital is Richmond.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops in 1926 and 1927:

Crop	Year	Acreage	Prod., bu.	Value
Corn	1927	1,626,000	47,967,000	\$44,180,000
	1926	1,694,000	46,585,000	39,597,000
Tobacco	1927	178,000	129,040,000*	25,033,000
	1926	189,000	137,032,000*	24,118,000
Hay	1927	1,100,000	1,498,000*	23,881,000
	1926	1,005,000	1,018,000*	19,734,000
Potatoes	1927	130,000	19,760,000	25,688,000
	1926	124,000	11,656,000	16,318,000
Sweet potatoes	1927	43,000	5,805,000	4,934,000
	1926	43,000	5,375,000	5,375,000
Wheat, winter	1927	687,000	8,381,000	11,063,000
	1926	687,000	11,336,000	14,850,000
Cotton	1927	67,000	32,000*	3,200,000
	1926	93,000	51,000*	2,907,000
Peanuts	1927	152,000	123,120,000*	5,540,000
	1926	135,000	136,620,000*	5,875,000
Oats	1927	186,000	3,999,000	2,559,000
	1926	186,000	5,886,000	3,047,000
Apples	1927		6,000,000	8,100,000
	1926		19,902,000	10,450,000

* pounds, † tons, ‡ bales.

MINERAL PRODUCTION. Coal, which furnished more than half of the total value of the mineral output of 1925, was mined more actively in 1926. Coal production in 1926 was 14,133,380 net tons; in 1925, 12,799,443 tons. Coal mined had a value for 1926 of \$27,203,000; for 1925, of \$23,490,000. Coal mining in 1926 was carried on at 109 mines of commercial size, situated in eight counties. Clay products, second in importance to coal, attained in 1925, the latest year of available reports, a value of \$3,909,634; in 1924, of \$4,288,040. Coke production was, from beehive ovens, in 1925, 421,091 short tons, and in 1924, 485,064 short tons; in value, \$1,901,623 in 1925 and in 1924, \$2,343,081. There were produced in 1926, 105,019 long tons of pig iron, as against 97,884 tons in 1925; in value, \$2,322,451 in 1926, and in 1925, \$2,237,749. Much stone, lime, sand, and gravel were also produced. The total value of the State's mineral production in 1925, duplications eliminated, was \$41,038,393; in 1924, \$37,962,143.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$21,473,410; their rate per

capita was \$8.58. They included \$5,608,938 apportioned for education. Totals not included in the above, of \$783,245 in interest and of \$9,028,904 in permanent improvement outlays, brought the aggregate of State expenditure to \$32,185,028. Of this, \$12,269,650 was for highways; \$3,428,206 being for maintenance and \$8,841,444 for construction. Interdepartmental items formed \$164,127 of total expenditure.

Revenue receipts were \$33,763,842; or per capita, \$13.49. Of their total, property and special taxes yielded 32.9 per cent, attaining a per capita rate of \$4.44. Earnings of departments and compensation paid the State for officials' services furnished 10.1 per cent of revenue; 39.8 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a gasoline sales tax.

Net State indebtedness on June 30, 1926, was \$25,204,197, or \$10.07 per capita. Property subject to ad valorem taxation bore a valuation of \$2,182,142,063. State taxes levied thereon were \$8,437,046, or \$3.37 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 4,547.59. No additional mileage was reported to have been built in 1927.

EDUCATION. Among the rural schools, 40 per cent of the pupils were reported to have attended school for a year's term of nine months. A special commission of educators appointed by the Governor and headed by Dr. M. V. O'Shea of the University of Wisconsin began a survey of the educational system in October. The school population of the State, as based on a school census of 1925, was 701,534. There were enrolled in the public schools in the school year 1926-27, 549,317 pupils. Of these 396,786 were in the elementary grades, and 152,531 in high school. The expenditure for public school education was \$23,571,000. Salaries of teachers in the schools averaged \$797. Elementary schools meeting all requirements of the State Board of Education in regard to standardization in the school year 1926-27 numbered 916.

CHARITIES AND CORRECTIONS. The State Board of Public Welfare has control or supervision over State and county charitable and penal institutions. It is engaged in the work of replacing county almshouses with district institutions, each serving a number of counties. Industries and farming are carried on at the State Penitentiary, and a large number of convicts have been used in State road building. The prisoners in custody of the State Penitentiary on Jan. 1, 1927, numbered 1979, according to statistics furnished by the U. S. Department of Commerce; 844 were admitted in 1926.

LEGISLATION. The General Assembly convened in extraordinary session March 16, to consider recommendations of governmental reform in the interest of economy and efficiency, and adjourned April 9. It passed a bill proposing a revision of the State constitution, subject to the bill's repassage by the Legislature in 1928 and a ratifying vote by the electorate in November of that year. The bill in the main followed the recommendations of the Prentiss commission which had studied the subject. Efforts on the part of Republican leaders to have provision made for more liberal voting qualifications, likely to prove favorable to the negro vote, were not successful. A poll tax exemption in particular was defeated. In all more than

80 changes in the constitution were proposed in the bill as passed. Republican representation on election boards, under the amended constitution, was to be permitted, and the General Assembly was to have the power to fix by statute property qualifications for voting. There was passed also a measure providing for an educational survey of the State. A bill to increase the State gasoline tax failed of passage.

POLITICAL AND OTHER EVENTS. The Director of Taxation carried on during the year an effort to increase the number of payers of State income tax. Returns were obtained from some 64,000 individuals and corporations, as against 40,000 in the year previous. The United States Supreme Court reviewed the case of Carrie Buck, a feeble-minded Virginia woman who, the State authorities had ordered, should be subjected to an operation to render her sterile. The court approved the order and upheld the State sterilization law as constitutional. A monument was erected at Timber Ridge, to the memory of General Sam Houston. State Attorney General Saunders ruled July 2 that women could not serve on juries.

OFFICERS. Governor, Harry F. Byrd; Lieutenant Governor, Junius E. West; Secretary of the Commonwealth, M. A. Hutchinson; State Treasurer, John M. Purcell; Auditor of Public Accounts, C. Lee Moore; Attorney General, John R. Saunders; Superintendent of Public Instruction, Harris Hart; Commissioner of Agriculture, George W. Koener.

JUDICIARY. Supreme Court of Appeals: President, Robert R. Prentiss; Associate Justices, J. F. West, Martin P. Burke, Preston W. Campbell, R. H. L. Chichester.

VIRGINIA, UNIVERSITY OF. A non-sectarian institution of higher education at Charlottesville, Va.; founded in 1819. The enrollment for the autumn term of 1927 was 2146, distributed as follows: College, 1239; education, 94; graduate students, 142; engineering, 149; law, 274; medicine, 248. For the 1927 summer session the registration totaled 2771. The faculty numbered 272, of whom 150 were above the rank of instructors, 15 professors having been added during the year. The endowment funds of the university amounted to \$4,016,175, and the annual income of \$1,349,000 was derived from the following sources: Endowment, \$199,181; from State appropriations, \$384,690; from fees, \$404,600; from miscellaneous sources, \$360,529. There were approximately 140,000 volumes in the library. President Edwin Anderson Alderman, D.C.L., LL.D.

VIRGIN ISLANDS. The name given by the United States government to the former Danish West Indies, purchased by the American government from Denmark by the treaty proclaimed Jan. 25, 1917; also a group of islands belonging to the British colony of the Leeward Islands (q.v.). The Virgin Islands of the United States consist chiefly of the Islands of St. Thomas, St. Croix, and St. John, and have a total area of about 132 square miles, with a population, according to the census of Nov. 1, 1917, of 26,051, of whom 80 per cent were negroes, 13 per cent of mixed races, and 7 per cent whites. St. Thomas, with an area of 28 square miles, had 10,191 inhabitants; St. Croix, 84 square miles, 14,901 inhabitants; and St. John, 20 square miles, 959 inhabitants. St. Thomas, the chief port, has coaling and oil fueling stations.

Education is compulsory. For the fiscal year 1925-26, the trade of the islands was: Imports, \$2,531,404, exports, \$1,119,706. Governor in 1927, Capt. Martin E. Trench, U.S.N.

VITAL STATISTICS. In the YEAR BOOK for 1925 appeared the total deaths and death rates of the so-called registration area of the United States for 1923 and 1924, and on Dec. 30, 1927, were released to the general public the corresponding statistics for 1925 and 1926. In this report issued by the U. S. Department of Commerce it was stated that 1,285,927 deaths occurred in 1926 within the death registration area of continental United States, representing a death rate of 12.2 per 1000 population, a slight increase over the rate for 1925. This area in 1926 comprised 41 States, the District of Columbia, and 25 cities in nonregistration States, with a total estimated population on July 1, 1926, of 105,170,000, or 80.8 per cent of the estimated population of the United States.

The principal increases in death rates in 1926 were from diseases of the heart, from 186 to 190 per 100,000 population, influenza, from 30 to 41, pneumonia (all forms), from 94 to 103, measles from 2 to 8, and whooping cough, from 7 to 9. Decreases in rates in 1926 were from diarrhoea and enteritis, under 2 years, from 32 to 27 per 100,000 population, and typhoid and paratyphoid fever, from 8 to 7.

The accompanying table, on page 803, shows for the death registration area in continental United States in 1925 and 1926 the number of deaths and the death rates per 100,000 population from leading causes.

VITAMINS. The number of these substances by 1927 had become increased to five, known as A, B, C, D, and E. The first three had been known for many years, while vitamin D is of much more recent origin and discovered in connection with the causation and cure of rickets (q.v.). The new accession differs from the preceding in that deprivation of it does not result in a deficiency disease but in sterility. Up to 1927 only small prolific animals (rats) had been subjected to experimental study. While the sterile female rat may be cured by the use of food extracts containing the new vitamin the male may be actually rendered sterile by withholding all foods containing it and then cured by proper feeding. Male sterility moreover is followed by atrophic changes in the genital glands, with loss of the epithelial lining of the seminiferous tubules. Substances rich in vitamin E comprise lettuce and in a less degree milk fat and beef muscle. Peculiarly rich in it is wheat germ in the form of an oil extracted by ether. This substance contains vitamins A, B, D, and E and when mixed with orange juice, which is rich in vitamin C, the mixture presents all five of the vitamins. Still another vitamin, known for the time being as vitamin PP, and regarded as a preventive of pellagra, (q.v.) is mentioned in the article on that disease, the best food vehicle for this substance being dried killed yeast. See ANEMIA, PRENATAL, FOOD AND NUTRITION; RICKETS.

VOCALISTS. See MUSIC.

VOGELGESANG, CARL THEODORE. An American naval officer, died in Washington, D. C., February 16. He was born at North Branch, Cal., Jan. 11, 1869. After graduating from the United States Naval Academy at Annapolis in 1890 he was commissioned as an ensign and

served through the various grades until he became rear admiral in 1922. He was on the *Bancroft* in the Spanish American War and later was on duty at the Naval War College in addition to sea service. He was commandant of the New York Navy Yard and the Third Naval District from July 1921 until November 1922, when he was appointed chief of the United States Naval Mission to Brazil. He spent two years in Brazil reorganizing the Brazilian navy with the assistance of a staff of sailors and officers of the United States Navy.

VOLHYNIA, vol-in'ia. A part of the Soviet Republic of Ukraine (q.v.); formerly a part of the Russian Empire; lying east of Poland, and Galicia in West Russia. Area, 27,699 square

miles; population, Jan. 1, 1915, 4,241,800. Capital, Zhitomir, with an estimated population before the War of 96,800.

VOLUNTEERS OF AMERICA. A non-sectarian philanthropic organization founded by General and Mrs. Ballington Booth, in March, 1896. Operations were begun without funds, but with many friends, with central offices in the Bible House, New York City. The society was incorporated on Nov. 8, 1896, under the laws of the State of New York. The society works in harmony with the evangelical churches. No pledge of life membership is required of its members; it promotes its officers on a merit system; its funds are audited at stated periods and balance sheets are issued. The society has

60 homes or institutions throughout the United States. There are summer camps to the number of 14, and the society owns the property and equipment of most of these. The winter activities of the society embrace all branches of relief work in a number of cities, in conjunction with the gospel mission work. The following record gives some idea of the work accomplished during 1926. There were 133 stations, of which 127 were in urban communities and six in rural areas, with a total membership of 28,756; there were Sunday schools in connection with 80 stations, reporting 9942 scholars. The total expenditures for 102 stations amounted to \$728,612, including \$321,754 for current expenses and improvements, \$215,003 for benevolences, etc., and \$191,855 not classified.

VOORHEES, FOSTER MACGOWAN. American politician, former Governor of New Jersey, died at Highbridge, N. J., June 14. Born in Clinton, N. J., Nov. 5, 1856, he graduated at Rutgers College in 1876 and undertook the study of law. He began law practice in Elizabeth in 1880, was a member of the Elizabeth Board of Education in 1884, elected to the Assembly for a three-year term, 1888-90, in 1894 entered the State Senate and in 1898 was made its presiding officer. When Governor Griggs resigned to become Attorney General of the United States the duties of governor devolved upon the president of the Senate and on Feb. 1, 1898, Mr. Voorhees became acting governor. A year later he was elected governor in his own right, serving a three-year term. In 1899 Rutgers conferred on him an honorary LL.D. degree as did Princeton in 1901.

VORARLBERG, förärl-bärk. A province of the new republic of Austria since the overthrow of the Dual Monarchy; formerly a crownland of the Austro-Hungarian monarchy. Area, 1005 square miles; population, according to the census of 1923, 139,999. Capital, Bregenz.

WADE, FESTUS JOHN. An American financier, died in St. Louis, Mo., September 28. He was born in Limerick, Ireland, in 1859 and was brought to America the following year. After very little schooling he began his business career in a dry goods store in St. Louis when he was 10 years of age. He tried several other occupations before he entered the banking business when he was 20. In 1890 the Mercantile Trust Company of St. Louis was organized with Mr. Wade as president. The total deposits at that time were \$17,000 as against approximately \$60,000,000 in 1927. He was a director of many corporations including the Chicago and Alton R. R., and Metropolitan Life Insurance Co. In 1918 during the World War he was appointed a member of the advisory committee of the Division of Finance and Purchases of the U. S. Railway Administration. In 1920 he went as chairman of the American Bankers' Association committee to the International Chamber of Commerce meeting in Paris.

WADHAMS, ALBION VARETTE. Rear Admiral, United States Navy, died at Nice, France, on January 13. He was born at Wadhams Mills, N. Y., in 1848, and graduated from the U. S. Naval Academy in 1868. During the succeeding 40 years he commanded many ships and naval stations. On his retirement in 1907 he was appointed a member of the New York State Board of Pardons, and in 1920 he was placed in command of the naval prison at Portsmouth, N. H.

WALCHOWITE. See CHEMISTRY, under *Mineralogical Chemistry*.

WALCOTT, CHARLES DOOLITTLE. An American geologist, died at Washington, D. C., February 9. He was born at New York Mills, N. Y. Mar. 31, 1850, and was educated at Utica Academy. Early showing an interest in geology, he educated himself in this field by direct contact with nature and careful study of various books and association with geologists and other scientists. In 1876 he became an assistant on the New York State Geological Survey, and in 1879 he was appointed to a like position in the U. S. Geological Survey. He devoted himself to a study of Cambrian rocks and fauna of the United States and in 1888 became palæontologist in charge of invertebrate palæontology. In 1893 he was made geologist in general charge of geology and palæontology and in the following year became director of the U. S. Geological Survey, serving until 1907. In that year he was chosen to be secretary and executive head of the Smithsonian Institution, and during the 20 years he held the post he assembled more Cambrian fossils in the Smithsonian than there were to be found in the museums of all the rest of the world. He was president of the National Academy of Sciences from 1917 to 1923. He held honorary degrees from Paris, Cambridge, St. Andrews, Christiania, Hamilton, Chicago, Johns Hopkins, Pennsylvania, Yale, Harvard and Pittsburgh universities. The author of many important geological memoirs and reports, his greatest work is the two-volume classic, *Cambrian Brachiopoda* (1912).

WALDSTEIN, CHARLES. See WALSTON, SIR CHARLES.

WALES. A historical division of the United Kingdom, consisting of 12 counties on the west coast of Great Britain, between the Irish Sea on the north and the Bristol Channel on the South. Area, 7466 square miles; population, according to the census of 1921, 2,205,680. See GREAT BRITAIN.

WALSTON (born WALDSTEIN), SIR CHARLES. A British author and archæologist, died at sea on March 21. He was born in New York City on Mar. 30, 1856, and received his education at Columbia College and at Heidelberg. After studying at Leipzig and the British Museum he traveled in Italy and Greece, and in 1880 became lecturer in classical archæology at Cambridge University. He was director of the Fitzwilliam Museum there from 1883 until 1889, and Slade professor of fine arts at Kings College, 1895-1901. He was director of the American School of Classical Studies at Athens (1895-97) and was in charge of excavations at Platea, Eretria, etc. A knighthood was conferred on him in 1912. He wrote: *The Balance of Emotion and Intellect* (1878); *Essays on the Art of Phidias* (1885); *Greek Sculpture and Modern Art* (1914); *Patriotism National and International* (1917); *The English-Speaking Brotherhood and the League of Nations* (2 eds. 1919-20); *Harmonism and Conscious Evolution* (1922); *Alcmenaes and the Establishment of the Classical Type in Greek Art* (1926).

WAR DEBTS. See UNITED STATES.

WARFIELD, SOLOMON DAVIES. An American railroad organizer and banker, died in Balti-

more, Md., on October 24. He was born near Baltimore in 1863, and after a public school education commenced to work as office boy in a firm of sugar merchants in Baltimore. He afterwards organized the Warfield Manufacturing Company, but, subsequent to his establishment of the Continental Trust Company in 1898, his activities had been concerned chiefly with various forms of finance rather than manufacturing. He was postmaster of Baltimore from 1894 to 1905, serving under Cleveland, McKinley and Roosevelt. As president of the Seaboard Air Line Mr. Warfield did much for the State of Florida by the extension of railroad lines and by assistance in solving the Everglades drainage problem. He organized the National Association of Owners of Railroad Securities, a protective organization which represented \$10,000,000,000 in railroad securities and which was the means of initiating and presenting to Congress the fundamentals of the rate-making provisions of the transportation act of 1920. Mr. Warfield was also president of the Baltimore Steam Packet Company and a director in the Maryland Casualty Company and in the New York Life Insurance Company.

WARREN, GENERAL SIR CHARLES. A British soldier and archæologist, died in London on January 22. He was born in Bangor, Wales, Feb. 7, 1840. After receiving his military education at Sandhurst and Woolwich he joined the Royal Engineers in 1857, and in 1861 was engaged in a survey of Gibraltar. He afterwards carried out exploring work in Palestine, and in 1876 was a commissioner for settling the western boundary of the Orange Free State. He commanded the Diamond Field Horse in the Kaffir war of 1878 and the Bechuanaland expedition of 1884. He was in command of a division in the Boer war of 1899-1902. He was knighted in 1885 and was created a K. C. B. in 1888. His published works include: *Underground Jerusalem* (1876); *The Temple of the Tomb* (1880); and with C. R. Conder, *Jerusalem* (1884); *The Early Weights and Measures of Mankind* (1914).

WARREN, JOHN COLLINS. An American surgeon, died in Boston, Mass., November 3. Born in Boston on May 4, 1842, he attended the Boston Latin School and in 1863 graduated from Harvard University and from Harvard Medical School three years later. He studied in London, Edinburgh, Paris, Berlin, and Vienna for two years. In 1871 he became instructor of surgery in the Harvard Medical School and for 50 years remained a member of the faculty, being professor of surgery in 1899 and in 1907 professor emeritus. He was an overseer of Harvard University, 1908-14. He received the honorary degree of LL.D. from the Jefferson Medical College, Harvard and McGill Universities and was made honorary fellow of the Royal College of Surgeons of England. He wrote extensively on surgery, among his works being: *Healing of Arteries in Man and Animals after Ligation* (1886); and *Surgical Pathology and Therapeutics* (1895).

WARREN, WILLIAM ROBERTSON. A former premier of Newfoundland, died at St. John's, N. F., December 31. He was born in St. John's on Oct. 9, 1879, and educated at Bishop Field College there and at Framlingham College, Suffolk, England. He was admitted to the bar in 1901 and created King's Counsel in 1910. Two

years after his election to the Newfoundland House of Assembly in 1908 he was made Speaker and held that post for four years. Mr. Warren succeeded Sir Richard Squires as prime minister in 1923 and was defeated a year later, becoming a member of the Supreme Court bench of the colony.

WARSHIPS. See NAVAL PROGRESS.

WASHBURN, FREDERIC LEONARD. An American entomologist, died in Minneapolis, Minn., October 15. He was born in Brookline, Mass., in 1860, and graduated at Harvard in 1882. He then spent a year in graduate work at Johns Hopkins University, returning to Harvard. After serving as instructor in zoology at the University of Michigan 1887-89, he was appointed in 1889 professor of zoology at the Oregon Agricultural College, where he remained until 1895, when he went to the University of Oregon as professor of biology. During part of this period he was State biologist of Oregon. His appointment to the faculty of the University of Minnesota as professor of entomology followed in 1902 and from then until 1918 he was State entomologist of Minnesota. In 1918 he was made professor of economic vertebrate zoology at the University of Minnesota.

WASHINGTON. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,356,621. The estimated population on July 1, 1927, was 1,562,000. The capital is Olympia.

AGRICULTURE. The following table gives the acreage, production and value of the principal crops in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Wheat, winter	1927	1,208,000	33,684,000	\$36,042,000
	1926	847,000	19,481,000	22,403,000
Wheat, spring	1927	983,000	19,660,000	21,429,000
	1926	1,260,000	21,420,000	25,061,000
Hay	1927	962,000	2,869,000*	30,425,000
	1926	939,000	2,043,000*	27,876,000
Potatoes	1927	79,000	13,430,000	8,058,000
	1926	67,000	10,720,000	10,184,000
Oats	1927	183,000	9,150,000	5,124,000
	1926	229,000	9,847,000	5,219,000
Corn	1927	43,000	1,591,000	1,432,000
	1926	49,000	1,715,000	1,629,000
Barley	1927	58,000	2,436,000	1,876,000
	1926	64,000	2,176,000	1,414,000
Apples	1927		25,848,000	32,946,000
	1926		34,080,000	25,522,000

* tons.

MINERAL PRODUCTION. Coal, the chief mineral product of the state in point of value, was mined in 1926 at about the rate of the years immediately preceding. The quantity of coal produced was 2,548,000 short tons in 1926, in 1925, 2,537,890 short tons; the value of the coal mined in 1925 was \$9,176,000. Coke production in the latest year of available record, 1925, was 79,257 short tons, and in 1924, 71,615 tons; in value, \$617,265 in 1925 and in 1924, \$573,644. Cement production attained a total quantity of 2,499,237 barrels in 1925 and 1,793,403 barrels in 1924; in value, \$5,523,324 in 1925 and in 1924, \$4,236,554. Clay products totaled, for 1925, \$2,619,250; for 1924, \$2,607,397. The quantities of the chief metals produced were as follows: gold, 9341 fine ounces, in 1926, as against 11,138 fine ounces in 1925; silver, in 1926, 171,649 fine ounces, in 1925 166,425 fine ounces; copper, 1,351,890 pounds in 1926 and in 1925, 1,159,057 pounds; lead, 4,546,228 pounds in 1926 and in 1925, 5,627,241

pounds; zinc, 1,044,354 pounds in 1926 and in 1925, 1,217,846 pounds. The total value of the production of these five metals in 1926 was \$931,491; in 1925, \$1,092,464. The production of stone and that of sand and gravel were both in excess of \$1,000,000 in 1925. Magnesite production was important, the quantity produced being 79,560 short tons in 1926, and in 1925, 56,060 tons; in value, \$596,700 in 1926 and in 1925, \$560,600. The total value of mineral production in 1925, duplications eliminated, was \$22,382,32; in 1924, \$21,159,370.

The value of the gold, silver, copper, lead, and zinc produced from ore mined in the State of Washington in 1927 was about \$872,200, according to estimates of the U. S. Bureau of Mines, Department of Commerce. There was a marked increase in the quantity of gold and a slight increase in copper and zinc. These increases, however, were overshadowed by the decrease in the output of lead and the general decrease in the metal prices of silver, copper, lead and zinc. The production of gold was more than doubled and increased to \$396,900 in 1927, as a result of renewed activity both at Republic and in Whatcom County. The output of silver in the State decreased to 158,000 ounces in 1927. The output of copper increased slightly to 1,655,000 pounds in 1927. The output of lead decreased to 1,211,000 pounds, valued at \$81,985, in 1927. The production of zinc recovered chiefly from concentrates increased to about 1,410,000 pounds in 1927.

FINANCE. As reported by the United States Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending Sept. 30, 1926, were \$20,515,354; their rate per capita was \$13.40. They included \$8,900,012 apportioned for education. Totals not included in the above, of \$638,720 in interest and of \$11,495,005 in permanent improvement outlays, brought the aggregate of State expenditure to \$32,649,679. Of this, \$10,892,912 was for highways; \$2,698,595 being for maintenance and \$8,194,317 for construction.

Revenue receipts were \$31,013,970; or per capita, \$20.26. Of their total, property and special taxes yielded 41.5 per cent, attaining a rate of \$8.40 per capita. Earnings of departments and compensation paid the State for officials' services furnished 6.3 per cent of revenue; 35.8 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles and from a gasoline sales tax.

Net State indebtedness on Sept. 30, 1926, was \$11,331,780, or \$7.40 per capita. Property subject to ad valorem taxation bore a valuation of \$1,207,621,667. State taxes levied thereon were \$16,109,673, or \$10.52.

TRANSPORTATION. The total number of miles of railroad lines in the state on Jan. 1, 1927, was 5,555.02. There were built in 1927, as reported by the *Railway Age* 6.50 miles of first track.

EDUCATION. Two years of professional and academic training subsequent to graduation from high school became the requirement for the certification of teachers, while the previous system of examination for certificates was done away with. There occurred 34 school consolidations, according to State Superintendent Preston in the *Journal* of the National Education Association, bringing the total of consolidations to 366.

The school population of the state for the

scholastic year 1926-27, including individuals from 4 or 5 up to 21 years of age, was reckoned at 420,399. There were enrolled in the public schools of the state 334,435 pupils; of these, 261,091 were in the kindergartens and the elementary grades, and 73,344 were in high schools. Current expenditures of the year on public school education attained \$25,150,787, and all expenditures, debt service and capital outlay included, were \$31,214,225. Salaries of teachers averaged, for women, \$1,417.38; for men, \$1,900.40.

CHARITIES AND CORRECTIONS. The State conducted in 1927 twelve independently operated institutions for the care or custody of individuals. These were the State School for the Deaf, Vancouver; State School for the Blind, Vancouver; State Training School, Chehalis; State School for Girls, Grand Mound; State Soldiers' Home, Orting; Washington Veterans' Home, Retell; Western State Hospital, Steilacoom; Eastern State Hospital, Medical Lake; Northern State Hospital; Sedro-Woolley; State Penitentiary, Walla Walla; State Custodial School, Medical Lake; State Reformatory, Monroe. Inmates of the state prison and the reformatory on Jan. 1, 1927, numbered 1548, according to statistics of the U. S. Department of Commerce.

LEGISLATION. The Legislature convened in regular biennial session January 10, holding session in the new capitol building from the middle of February. Opponents of Governor Hartley dominated both houses, but lacked the strength to carry a programme of enactments over his veto. Appropriations passed provided \$34,600,000 under the general appropriation measure, \$1,500,000 in supplemental appropriations and \$27,184,360 for roads, covered in part by a half-mill highway fund levy. There was passed over the Governor's veto a bill to render it lawful for persons related by marriage to intermarry. In all, 168 Senate and 207 House measures were enacted. Vetoes of items in the appropriation bills cut the total of appropriations for the biennium by about \$2,500,000. It was provided that prisoners in the state penitentiary should work for compensation. Salary of the head of a family up to \$25 was made exempt from garnishment. An administrative division of mining safety was created. Among measures vetoed were one to create a state-wide old age pension system, one providing for a certificate of title to motor vehicles, one permitting the use of voting machines at the polls and one allowing cities of the first class to incur debt for the acquisition of municipal golf courses. A constitutional amendment to allow the State to place different rates of taxation on different classes of property was submitted, to be voted on by the electorate in November, 1928.

POLITICAL AND OTHER EVENTS. Governor Hartley sought to have an audit made of the accounts of the State Highway Department, by the Director of Efficiency. After this examination had proceeded for some time, opponents of the Governor obtained a judicial order upon the State Highway Engineer, to deliver the books of the Department to the State Auditor. Delivery being refused, the State Supreme Court committed the engineer to prison October 19 for contempt. The Cascade Tunnel Association, seeking the creation of an easy gradient route traversing the Cascade Range by a deep tunnel 27 miles long was reported November 1 to have abandoned at its convention in Seattle a plan

to persuade the State to engage its public credit for the sum of \$40,000,000 for the cost of the project; it was proposed to seek instead the aid of private capital. At Mount Spokane a tract of 1500 acres was acquired for a state park.

An election at Spokane, held March 8, for the choice of a city commissioner, yielded a majority of but a single vote for Mayor Charles A. Fleming over John C. Argall, who contested the result. A recount board declared, December 7, that Fleming had been elected by 16 votes, receiving 11,930, as against 11,920 for Argall. At Bellingham, Russell Tremain, a 12-year-old boy taken from his parents in 1925 and made a court ward because the elder Tremains would not let him take a school oath of allegiance, was restored to his parents, December 15, by Supreme Court order.

OFFICERS. Governor, Ronald H. Hartley; Lieutenant Governor, W. Lon Johnson; Secretary of State, J. Grand Hinkle; Treasurer, W. G. Potts; Auditor, C. W. Clausen; Attorney General, John Dunbar; Superintendent of Public Instruction, Josephine Corliss Preston.

JUDICIARY. Supreme Court: Chief Justice, Kenneth Mackintosh; Associate Justices, Emmet N. Parker, Mark A. Fullerton, John R. Mitchell, O. R. Holcomb, Warren W. Tolman, John F. Main, William Askren, Walter French.

WASHINGTON, UNIVERSITY OF. A State institution of higher education at Seattle, Wash.; founded in 1861. The courses offered in 1927-28 were: Business administration, education, engineering, fine arts, fisheries, forestry, journalism, law, liberal arts, library science, mines, pharmacy, science, and graduate work. The enrollment for the autumn term of the same year was 7354, of whom 3088 were women, and 4266 men. Of this number 335 were graduate students (including all students with graduate standing except those in the professional schools of law and library science). The summer school enrollment for 1927 totalled 3249 in the two terms, including 2227 women and 1022 men. On November 1, the faculty consisted of 345 members. The income from all sources for the scholastic year 1926-27 was \$2,700,810. The library contained 237,202 volumes. Acting president, Dean David Thomson.

WASHINGTON AND JEFFERSON COLLEGE. A non-sectarian institution of higher education at Washington, Pa.; founded in 1802. The enrollment for 1927-28 totaled 504, of whom 12 were graduate students; 82, seniors; 101, juniors; 128, sophomores; 181, freshmen. The 1927 summer session had a registration of 280. There were 30 members on the faculty. The productive funds of the college amounted to \$1,441,128, and the income from all sources during the year was approximately \$202,812. The library contained 38,194 volumes. President, S. S. Baker, M.S., LL.D.

WASHINGTON AND LEE UNIVERSITY. A non-sectarian institution of higher education at Lexington, Va.; founded in 1749. The enrollment for the autumn of 1927 was 874. There were 56 members on the faculty. The productive funds of the university amounted to \$1,373,851, and the income for the year was \$320,121. The library contained 80,000 volumes. President, Henry Louis Smith, Ph.D.

WASHINGTON BICENTENNIAL. See CELEBRATIONS.

WASHINGTON UNIVERSITY. A non-sectarian, coeducational institution of higher learning at St. Louis, Mo.; founded in 1853. The enrollment on Nov. 1, 1927, was 6434, distributed as follows: graduate students, 241; college of liberal arts, 1548; engineering, 418; architecture, 120; business and public administration, 143; law, 192; medicine, 341; dentistry, 153; fine arts, 307; extension division, 2731; nursing, 201. There were 920 students registered for the summer session of 1927. The faculty for 1926-27 numbered 504. The value of the buildings, grounds and equipment of the institution was estimated at \$8,481,967, the endowment was \$13,343,897, and the income for the year was \$2,031,255. The library contained 277,885 volumes and 116,619 pamphlets. A women's building, to cost \$285,000, and the school of dentistry building, to cost \$260,000, were under construction. Gifts received during the year amounted to \$2,117,172 of which \$1,000,000 was for the Mallinckrodt Radiological Institute and \$1,000,000 for the Eye, Ear, Nose and Throat Hospital. Herbert S. Hadley, LL.D., (q.v.), Chancellor of the University, died on December 1. Acting Chancellor, George R. Throop, Ph.D.

WATER POWER. The number of applications for licenses under the Federal Water Power Act has for several years averaged about one hundred per annum. During 1927 these involved an aggregate of over three million horse power in prospective installations, according to the report of the Federal Power Commission. Of these applications that of the Appalachian Electric Power Company for a development of 100,000 horse power on the New River and one by the Savannah River Electric Company for 120,000 horse power on the Savannah River were among the most noteworthy. Thirty-one new projects having an installed capacity, when completed, of 362,000 horse power were started during the year.

On the Pacific Coast there was less activity in new hydro-electric construction. This was because most of the readily available sites had been developed and the large production of the California oil field had made it cheaper in many cases to meet the demands for additional power through the construction of large steam plants. Sufficient steam plant capacity was also desirable to supplement the seasonal fluctuation in available water power.

Such new work as was in progress on the Pacific Coast was concerned largely with the utilization of high heads. The outstanding project under construction in California at the end of the year was Big Creek Plant No. 2-A of the Southern California Edison Co., which was to contain two 56,000-horse power double overhung impulse wheels, running at 250-r. p. m. under a head of 2200 feet. These units represent the largest capacity Pelton type wheels ever built.

Of somewhat smaller capacity but higher head were two 30,000-horse power double overhung impulse wheels of the Pelton type for the Bucks Creek Development of the Feather River Power Company. These were to operate under a head of 2548 feet. Another high head plant which went into operation in 1927 was the Balch Plant of the San Joaquin Light & Power Company, which contains a 40,000-horse power impulse operating under 2400 feet head.

The Conowingo development on the Susquehanna River, perhaps the most outstanding

project in the East, was nearing completion. This is destined to tie into the large interconnected system of steam and hydro plants serving Philadelphia, eastern Pennsylvania and practically the whole State of New Jersey. The seven 54,000 horse power generators were the world's largest in dimensions, although not in capacity. They are 38 feet outside diameter and weigh a million and a quarter pounds each. They operate at about 82 r. p. m. under a head of 89 feet.

Inasmuch as it was planned to operate the Conowingo turbines at peak loads and shut them down during low load periods of the day (because they would operate as part of a large interconnected power system), it was important to provide against leakage when they were shut down. Therefore, a novel feature was incorporated in the form of 27-foot butterfly valves at the inlet to the spiral casing instead of the usual head-gates at the upper ends of the penstocks. Another feature of these units is the large amount of welding employed to save weight, whenever possible, over castings.

A unique installation was the development to be made on the Rocky River near Danbury, Conn. Here the system comprises a chain of several water-power plants on the river and an existing steam plant, the Devon Station, near Tidewater. A large storage reservoir was to be built at relatively high elevation and into this water will be pumped, by electricity from either hydro or steam power, during off-peak periods and seasons of excess flow. This water will then be drawn from the reservoir for use in the hydro plants during dry seasons or to help out during periods of peak load. The scheme had been employed quite extensively in Europe where there were about forty such installations either in operation or under construction, but it was the first application of its kind in the United States.

Activity in hydro-electric development continued unabated in Canada. During 1927 over 220,000 horse power was installed making a total for the Dominion of some 4,770,000 horse power. This would be increased to over five million horse power by the completion of projects under construction during the year—an increase of 100 per cent in the previous seven years. These developments comprised both power companies and large industrial plants, particularly paper mills.

Of interest in the line of efficiencies attained with hydraulic turbines may be mentioned the results of tests conducted on the 35,000-horse power units now in operation at Muscle Shoals. A maximum efficiency of 93.1 per cent was attained at rated load and 83.7 per cent at half load under a net head of 90 feet. The corresponding combined turbine and generator efficiency under full load was 91 per cent, which probably represents a record for a unit of this type.

Among improvements in design warranting mention was the introduction of water-lubricated guide bearings with rubber linings to minimize cutting or scoring of the shaft from sand or grit. Also during the year a number of companies adopted electric drive for the turbine governors. Induction motors were employed for this purpose. It may also be mentioned that an appreciable portion of the new work under construction covered turbines with propeller-type runners.

The increasing demand for automatic operation of hydro plants, in order to reduce labor,

especially where a system of small plants is involved, resulted in such control apparatus becoming highly developed. A relatively large number of plants are now so operated and are giving entire satisfaction.

WATER SUPPLY. See **AQUEDUCTS; WATER-WORKS AND PURIFICATION.**

WATER WHEELS. See **WATER POWER.**

WATER-WORKS AND PURIFICATION.

Activity in water-works construction continued. For Boston and vicinity the Metropolitan Water Supply Commission, a special body created for the purpose, was engaged in providing an additional water supply for Boston and adjacent cities from distant gathering grounds in the Ware and Swift Rivers drainage basin, at an estimated total expense of \$65,000,000. Bids were received near the close of the year for the easterly half of the aqueduct tunnel some 13 ft. in diameter and 25 miles long, extending from the existing Wachusett Reservoir on the Nashua River to a proposed diverting reservoir on the Ware River from which the flood flows of that stream will be sent easterly to the Wachusett Reservoir or else westerly through the other half of the tunnel, when built, to a proposed storage reservoir on the Swift River which will store the waters of both streams. Shafts from which the easterly half of the tunnel will be driven have been sunk and it is expected that this portion of the tunnel will be in use in 1931.

New York City was engaged in making borings and plans for an auxiliary deep pressure tunnel to supplement the one already in existence for conveying water from the existing Catskill aqueduct supply, from the Hillview reservoir in the City of Yonkers through Bronx Borough and under the East River to Brooklyn. The tunnel will be 17 ft. in diameter at the upper end and 20 miles long. Uptakes will connect it with the existing distribution system. Estimated cost of this project was \$67,000,000. In place of the additional water supply of 434,000,000 gallons a day from streams east of the Hudson River and north of the existing Croton supply system, proposed in 1926, there was before the Board of Estimate and Apportionment for approval at the close of the year recommendations by the Board of Water Supply of New York City for an additional water supply of 600,000,000 gallons a day from five New York tributaries of the Delaware River, together with a supply of 100,000,000 gallons a day from Rondout Creek, a tributary of the Hudson. The estimated cost of the new project is \$273,000,000, which is about \$75,000,000 less than the estimated cost of the project recommended in 1926. See **AQUEDUCTS** and map in that article.

Interstate complications were threatened both as to the Boston Metropolitan and the New York additional water supply projects, Connecticut insisting that the Swift River diversion would injuriously affect cities and industrial plants on the Connecticut River within its boundaries, and both the State of New Jersey and the City of Trenton claiming injury from the diversion of water from tributaries of the Delaware for the supply of New York City. A tri-state Delaware River compact for the allocation of the waters of the Delaware River among the states of New York, New Jersey and Pennsylvania was still without ratification at the close of the year, except by the New York legislature.

Progress was made on large additional water

supplies for both Albany and Rochester, N. Y. Both of these, and also the proposed additional supplies for Boston and for New York City, would be by gravity. Baltimore, Md., and Washington, D. C., completed supplemental filtration plants of large size, each being of the mechanical or rapid type. The earlier plant at Washington, built many years ago, was of the flow sand type, now rarely adopted for new construction. Chicago had established an experimental water treatment plant to obtain information for its guidance in carrying out the virtual orders of the War Department, to install water purification works, these orders not being addressed to the City of Chicago, but to the Chicago Sanitary District, as a condition of the War Department permit for the continued diversion of water from Lake Michigan to the Chicago Drainage Canal for the dilution and disposal of the sewage of the district.

San Francisco was continuing construction of the Hetch Hetchy aqueduct to bring water by gravity from the Tuolumne River. The East Bay Cities Municipal Utility District, including Oakland and eight other cities, was introducing a gravity water supply from the Mokelumne River. The present supplies of San Francisco and also of most or all of the cities in the district across the bay were furnished by private water companies. On November 1, the nine cities on the east side of San Francisco Bay voted by more than 8 to 1 a \$26,000,000 bond issue to acquire or construct a water distribution system. San Francisco had an option on the purchase of the property of the Spring Valley Water Company, from which its supply was derived, but, on June 14, it voted down for the fourth time a proposal to buy the works, there having been each time an actual majority but not the legally required two-thirds majority in favor of the bonds. It was expected that a two-thirds majority would be obtained at a later election.

Montreal, Canada, let contracts in 1927 for a large supplemental filtration plant. Its city council early in the year voted to buy for \$14,000,000 the water-works system of the Montreal Water & Power Company, which supplied territory within and adjacent to Montreal. The city actually took over the works and operated them for a time, but various legal complications connected with allegations of unduly high prices paid for the plant led to the return of the works to the company and the appointment of a condemnation commission to fix the price of the property.

A new edition of the late George O. Whipple's *Microscopy of Drinking Water*, revised and enlarged by G. M. Fair and M. C. Whipple, appeared in 1927. See **AQUEDUCTS**.

WAVE MECHANICS. See **PHYSICS**.

WEATHER. For several years, the American press had given a great deal of publicity to the prediction that the weather of 1927 would be so abnormal as to constitute a return of the "summerless" year 1816, and so adverse to agriculture as to menace the nation's food supply. This prediction, however, proved to have been completely unfounded. In no particular did the weather of 1927 display abnormalities other than such as have occurred in the past and are more or less to be expected in any year; and the yields of most of the principal crops (with the exception of certain fruits) were close to,

or above, normal, not only in the United States but for the world as a whole.

Unusual weather occurs each year over greater or less areas; and conditions adverse, or seriously destructive, to crops likewise occur each season in one or more regions, but never so extensively as to menace the food supply of the country. Over the country as a whole, the weather during the growing season of 1927 was in general favorable; in most of the principal agricultural sections the season was longer than usual, and the general warmth during the fall made the latter part of the period almost ideal. For the United States as a whole, June and August were markedly cool; the remaining months were either above, or not far below, normal, though May was decidedly cool in the northwestern border states.

The summer as a whole (i.e., June, July and August) was unusually cool over most of the country; but of the summers of 1903, 1907, 1915, and 1927, there is little to enable one to say which was the most conspicuous in respect to coolness, although, considering the temperatures reached, the length of time they prevailed, and of the areas affected, probably 1915 should be given first place. The summer of 1927 was the coolest during the last fifty odd years at Lynchburg, Memphis, and Cincinnati; the second coolest at New York City, Philadelphia, Chicago, St. Louis, and Indianapolis; and the third coolest at Washington, D. C. At New Haven and New Bedford, it ranked thirtieth and thirty-second, respectively. In the Western States, the summer was unusually warm; it was the hottest on record at Portland, Oregon, and the third hottest at San Francisco.

The most abnormal single month was August, which, due to an excess of cloudiness and an absence of marked hot spells, was one of the coolest months of August in the last fifty years over a large part of the eastern north and central states. See **GEOGRAPHICAL SOCIETY, NATIONAL**.

WEEVIL. See **ENTOMOLOGY, ECONOMIC**.

WEIR, ROBERT FULTON. An American surgeon, died in New York City on April 6. Born in New York on Feb. 18, 1838, he was graduated from the Columbia College of Physicians and Surgeons in 1859. He was assistant surgeon in the Union army during the Civil War. From 1873 until 1900 he was a lecturer and a professor of surgery at Columbia University, and in the latter year was president of the American Surgical Association and also of the New York Academy of Medicine. He was attending surgeon at New York Hospital, 1876-1900, and was connected with many medical organizations. He was made an honorary fellow of the Royal College of Surgeons in London in 1909.

WELFARE WORK. NATIONAL CONFERENCE OF SOCIAL WORK. The fifty-fourth meeting of this organization met at Des Moines May 11-18 with something like 3000 social workers in attendance. It was the customary hive of activity with a bewildering number of special sections and round tables. It became more and more doubtful whether an expression of a social philosophy could be expected from this group. Conference after conference devoted itself to the

plight of the maladjusted without troubling to inquire into the fundamental reasons for maladjustment.

As was said, the round tables lost themselves in a wealth of detail. There were discussions of the visiting teacher, the building of rural community centres, and the problems of undifferentiated case work in country communities. There was hearty endorsement of the work of prohibition, Miss Grace Abbott calling the Eighteenth Amendment the "great child-welfare measure of the century." Nevertheless, there was fairly general agreement that a substitute for the saloon as a social unit had not yet been found, despite the automobile, the radio, and motion pictures.

The conference showed how rapidly fashions changed. The emphasis was no longer on the intelligence quotient of the unfit but upon his emotional reactions. Psychology is not the key but psychiatric social work. The conference witnessed a successful meeting of the committee on publicity methods.

Other papers and discussions were Leon Whipple's "The Magic Gift of Style." Miss Jane Addams on the "Social Consequences of the Immigration Law," Royal Meeker on "International Aspects of Social Work." Memphis was decided on as the place for the next conference under the presidency of Sherman C. Kingsley of Philadelphia. Howard R. Knight was continued as general secretary. Division meetings included the following subjects: Children, Delinquents and Correction, Health, the Family, Industrial and Economic Problems, Neighborhood and Community Life, Mental Hygiene, Organization of Social Forces, Public Officials and Administration, the Immigrant, Professional Standards and Education, Educational Publicity.

NATIONAL CONFERENCE OF JEWISH SOCIAL SERVICE. This group met at Des Moines, Iowa, also May 8-11. The tenor of the Conference was more or less concerned with the *raison d'être* of sectarian, and particularly Jewish, social work. Harry L. Lurie delivered an excellent paper on the relations between Jewish family agencies and public and non-sectarian agencies. It was the theme of his discussion that public agencies were preempting gradually the field of family dependency, and rightly so. Other outstanding papers were those by M. J. Karpf ("Extra-Curricular Training of Jewish Social Workers"), Dr. A. M. Dushkin ("Development of Community Programs of Jewish Education"), S. A. Goldsmith ("Factual Material in Child-Care Surveys of the Bureau of Jewish Social Research"). The Conference voted to continue meeting annually. For 1927-28, Morris D. Waldman was elected president. Cincinnati was chosen as the place of the 1928 Conference.

STATISTICS. Estimates put the total expenditure on American philanthropic activity yearly in the neighborhood of two billions. In New York City alone, there were 1500 private social welfare agencies with budgets that ran between \$40,000,000 and \$50,000,000. Chicago spent at least \$30,000,000 while the Community Chests of 299 other cities (and this excluded unaffiliated societies) spend in the neighborhood of \$57,000,000 annually on non-official charities. An important development of the twentieth century was the creation of large financial foundations with huge funds in trust to be expended on social amelioration. The Russell Sage Founda-

tion (q.v.) lists 78 such, as of 1926, 40 of these having funds in trust to a total of \$432,000,000. The Russell Sage Foundation has \$15,000,000, the Rockefeller Foundation (q.v.) has \$165,000,000; the Laura Spelman Rockefeller Memoria has \$73,000,000; the Carnegie Corporation (q.v.) has \$135,000,000. If to the 40 funds mentioned above were added the 21 educational funds there would result a total of 61 foundations possessing \$790,000,000. It is safe to say that if the funds whose values are unknown were to be included there would be 117 foundations having a value of a billion dollars.

PUBLICATIONS. A new and important addition to the periodicals in this field was the *Social Service Review*, a quarterly, edited by the faculty of the graduate school of Social Science Administration of the University of Chicago. The managing editors were Edith Abbott and S. P. Breckenridge. Volume 1, number 1 appeared in March, 1927.

WELLAND CANAL. See CANALS.

WELLESLEY COLLEGE. A non-sectarian institution for the higher education of women at Wellesley, Mass.; founded in 1875. The enrollment for the term of 1927 was 1604, including 37 resident candidates for the degree of M.A., 23 for the certificate in hygiene and physical education, and 7 for the M.S. in hygiene and physical education. The actual teaching staff numbered 166, and the officers of instruction and government 239. The trust funds amounted to \$8,520,418.60, and the income for the year was \$1,005,699.14 (including dormitories' net). A change was effected in the curriculum which diminished the prescribed work by six hours. The library contained approximately 120,000 volumes. President, Ellen Fitz Pendleton, M.A. Litt.D., LL.D.

WELLINGTON, GEORGE LEWIS. An American politician, former Senator from Maryland died at Cumberland, Md., March 20. He was born at Cumberland in 1852. After very little schooling he went to work in a store and in his spare hours he educated himself. He was an accountant in the Second National Bank at the age of eighteen, serving under the late Lloyd Lowndes, president of the bank, whose successful campaign for governor he later managed. Mr. Wellington was elected to the House of Representatives in 1894 and to the Senate two years later. At one time he was much in the public eye because of his differences with President McKinley over the Philippine question, and he supported Mr. Bryan for the presidency.

WESLEYAN METHODIST CONNECTION OF AMERICA. See METHODIST, WESLEYAN CONNECTION OF AMERICA.

WESLEYAN REFORM UNION. See METHODISTS, WESLEYAN.

WESLEYAN UNIVERSITY. An institution for the higher education of men at Middletown, Conn.; founded in 1831. The 1927 autumn enrollment was 621, the number of students being restricted. The faculty numbered 61. The productive funds of the University amounted to \$4,678,423, and the income for the year was \$533,555. The Olin Library, costing \$750,000, the Shanklin Laboratory of Biology and a new dormitory were under construction during the year. President, James Lukens McCaughy, Ph.D.

WESTERN AUSTRALIA. A state of the Commonwealth of Australia, comprising that

portion of the island continent which lies to the west of the Northern Territory and Southern Australia; the largest state in the Commonwealth, constituting almost one-third of the area of the continent. Area, estimated at 975,920 square miles; population, according to the census of 1921, 332,732; the full-blooded aborigines were estimated at 22,471 in 1924-25; estimated population of the state on Mar. 31, 1927, 381,470. Capital, Perth, with an estimated population at the end of 1925, including suburbs, of 170,338. In 1924-25 the movement of population was; Births, 8185; deaths, 3315; marriages, 2746. In 1924 immigrants, 25,195; emigrants, 20,924. In 1925, the number of government schools was 810, with 51,647 students enrolled; the number of private schools was 122, with 11,609 students enrolled.

In 1926 the area under crops was 2,932,109 acres. The estimated areas sown with wheat, oats and barley for the 1926-27 season, both for grain and hay, were respectively, 2,776,818, 454,034, and 17,114 acres. In 1926 the chief crops with their acreage and yield were as follows: Wheat, 2,112,032 acres, 20,471,177 bushels; oats, 278,344 acres, 2,939,380 bushels; barley, 13,306 acres, 158,300 bushels; hay, 391,142 acres, 355,260 tons; potatoes, 4262 acres, 16,097 tons; vines, 1096 acres, 238,726 gallons of wine. The livestock numbered 170,563 horses, 835,911 cattle, 8,861,795 sheep, 74,310 pigs, 21,596, goats, 5594 camels, and 10,315 miles and donkeys. The wool clip was 44,009,161 pounds and the value of wool exported was \$3,500,000. The two leading minerals are coal and gold. In 1925, 437,461 tons of coal valued at \$303,203 were mined and 441,257 ounces of gold valued at \$1,874,320.

The dependence of Australia on overseas trade was demonstrated by Western Australia's record for the fiscal year ended June 30, 1926. Official figures show that during this period almost 68 per cent of the State's trade was with the overseas markets while 32 per cent of the total was with other states in the Commonwealth. Direct imports from overseas were valued at £7,963,500, as compared with £8,000,000 for the previous year, and the foreign import arrivals by way of other states amounted to £921,500, against £941,654 during the previous year. Imports of Australian origin into the State of Western Australia during the year reached £7,500,000. Of total exports valued at £14,600,000, more than £12,000,000 went overseas, and only £1,540,000 to other Australian States. Large quantities of jams and jellies, preserved milk, manufactured tobacco, butter, cheese, confectionery, oatmeal, bacon and hams, and tinned meat are required annually. The revenues for 1925-26 amounted to £8,808,116, against expenditures of £8,907,308. The deficit of the state, which had been accruing since 1912, amounted in 1926 to £6,200,000. On June 30, 1926, the railway system comprised 3864 miles of main line representing a capital expenditure of £21,026,792.

Executive power is vested in a governor who acts through a responsible ministry; and legislative power in a parliament of two houses, a council of 30 members elected for six years and an assembly of 50 members elected for three years. Governor in 1927 Lieut. Col. Sir William Robert Campion; prime minister, treasurer, and minister for forests, Philip Collier.

WESTERN RESERVE UNIVERSITY. A non-sectarian institution of higher education at

Cleveland, Ohio; chartered in 1826. The enrollment for the autumn of 1927 in the regular day curricula was 3262, distributed as follows: Adelbert College, for men, 914; college for women, 824; school of medicine, 245; school of law, 283; school of pharmacy, 118; school of dentistry, 184; school of nursing, 251; school of library science, 73; graduate school, 324; school of applied social sciences, 187; kindergarten training department, 152. The enrollment in Cleveland College, the evening school of the University, was 2255, and the enrollment in the courses for teachers in service, carried on in cooperation with the Cleveland School of education, was 2032. The 1927 summer school, carried on in cooperation with the Cleveland School of Education, had a registration of 1932. In the autumn of 1927 the faculty numbered 351 professors, associate professors, assistant professors and instructors, 151 lecturers and demonstrators and 107 fellows and assistants. The endowment of the University was \$7,701,691, and the income for the year \$1,523,899. The library contained 300,000 volumes. President, Robert E. Vinson, D.D., L.H.D., LL.D.

WEST POINT. See UNITED STATES MILITARY ACADEMY.

WEST SPITZBERGEN. The largest and most important of the islands of the Svalbard Archipelago (q.v.), which had become of international interest since it passed under the sovereignty of Norway. Until 1925 it had neither law nor government, and its resources of land and sea game were nearly exterminated by unregulated hunting. Norway promulgated drastic laws for the conservation of game; reindeer cannot be killed until 1935, and all hunting must be done under license and strict regulations. There are immense deposits of coal of high quality, the reserves being estimated at over 10,000 million tons. There are 13 coal companies; six are working with the most efficient machinery. Mining continues throughout the year, but shipments are usually confined to six months. The shipments were, in 1922, 103,000 tons; in 1924, 451,914 tons; in 1925, 414,412 tons; and were expected soon to approximate 500,000 tons.

The population of about 2000 in summer falls in winter to 1500. Ample provisions are made for health and comfort, with church, school, hospital, movies, etc. The largest settlement is Longyear City, at Ice Fiord, where its 500 or more inhabitants have all modern comforts, regular mail and radio service.

WEST VIRGINIA. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,463,701. The estimated population on July 1, 1927, was 1,696,000. The capital is Charleston.

AGRICULTURE. The following table presents the acreage, production and value of the principal crops in 1926 and 1927.

Crop	Year	Acreage	Prod., bu.	Value
Hay	1927	849,000	1,284,000*	\$19,197,000
	1926	797,000	1,050,000*	20,294,000
Corn	1927	451,000	15,109,000	15,109,000
	1926	485,000	16,005,000	15,045,000
Potatoes	1927	58,000	5,989,000	7,488,000
	1926	47,000	4,982,000	8,320,000
Wheat, winter	1927	185,000	1,796,000	2,461,000
	1926	147,000	2,852,000	8,175,000
Oats	1927	224,000	5,421,000	8,469,000
	1926	207,000	5,796,000	8,420,000
Tobacco	1927	7,500	6,000,000*	1,170,000
	1926	10,000	8,500,000*	1,114,000

* tons, † pounds.

MINERAL PRODUCTION. The bituminous coal output of the State, second only to that of Pennsylvania in point of quantity, was much increased in 1926, and but slightly below the Pennsylvania total. There were mined in the State in 1926, according to estimate based on railroad shipments, 147,209,000 short tons of soft coal, as compared with 122,380,959 tons produced in 1925. The 1925 product was valued at \$209,655,000. From coal were produced in 1925, the latest year of available record, 1,546,032 short tons of coke, and in 1924, 1,328,659 short tons; in value, \$6,648,745 for 1925 and for 1924, \$6,048,638. There were produced in 1925, the latest year of available record, 180,345,000 M cubic feet of natural gas; in 1924, 182,285,000 M cubic feet. The product was valued at \$70,903,000 for 1925 and for 1924 at \$68,000,000. In value of natural gas produced in 1925, West Virginia led the list of States. There were obtained from natural gas in 1926 65,000,000 gallons of gasoline; in 1925, 58,201,000 gallons. Gasoline thus produced had a value of \$7,700,000 (estimated) for 1926 and for 1925 of \$6,759,000. Petroleum production in 1926 was 5,975,000 barrels, as against 5,753,000 barrels in 1925; in value, \$20,200,000 (estimated) in 1926 and in 1925, \$20,055,000. Pig iron was produced and shipped to the quantity of 364,302 long tons in 1926, and of 499,047 tons in 1925, the product for 1925 having a value of \$9,416,095. Clay products had for 1925 a total value of \$15,293,371; for 1924, \$15,625,022. The total value of the State's mineral production in 1925, duplications eliminated, was \$333,527,697; in 1924, \$307,314,205.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending June 30, 1926, were \$11,994,063; their rate per capita was \$7.25. They included \$2,035,500 apportioned for education. Totals not included in the above, of \$2,281,312 in interest and of \$11,708,330 in permanent improvement outlays, brought the aggregate of State expenditure to \$26,043,705. Of this, \$12,427,143 was for highways; \$2,125,579 being for maintenance and \$10,301,564 for construction.

Revenue receipts were \$19,449,476; or per capita, \$11.76. Of their total, property and special taxes yielded 24.8 per cent, attaining a rate of \$2.92 per capita. Earnings of departments and compensation paid the State for officials' services furnished 9.2 per cent of revenue; 53.5 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a gasoline sales tax.

Net State indebtedness on June 30, 1926, was \$47,724,866, or \$28.85 per capita. Property subject to ad valorem taxation bore a valuation of \$2,135,190,290. State taxes levied thereon were \$2,989,266, or \$1.81 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 4,023.65. There were built in 1927 according to the *Railway Age*, 6.34 miles of first, 4.70 of second, 0.61 of third and 0.75 of fourth or other track.

EDUCATION. The State commenced a survey of the schools, both elementary and high, and of the institutions of higher learning. A teachers' manual and course of study for elementary schools was completed, comprising 440 pages, and

prepared by the State board with the aid of a special committee. The school population of the State as given in 1927 was 503,954. There were enrolled in the public schools 384,720 pupils. Of these 349,409 were in the elementary schools and 35,311 in high schools. Expenditure for public school education in 1926 attained a total of \$25,125,049. The salaries of teachers averaged, in elementary schools, \$959; in high schools, \$1950.

CHARITIES AND CORRECTIONS. State institutions of welfare are: Weston State Hospital; Spencer State Hospital; Huntington State Hospital; Hospital No. 1, Welch; Hospital No. 2, McKendree; Hospital No. 3, Fairmont; State Tuberculosis Sanitarium, Hopemont; State Colored Tuberculosis Sanitarium, Denmark; State Colored Hospital for the Insane, Lakin; West Virginia Children's Home, Elkins; West Virginia Colored Orphans' Home, Huntington; State Home for Aged and Infirm Colored Men and Women, Charleston; West Virginia Penitentiary, Moundsville; West Virginia Industrial School for Boys, Pruntytown; West Virginia Industrial Home for Girls, Industrial; State Industrial School for Colored Boys, Lakin; State Industrial Home for Colored Girls, Huntington; Schools for Deaf and Blind, Romney; West Virginia School for Colored Deaf and Blind, Institute. Patients in State hospitals for mental disease on January 1, 1927, according to statistics of the U. S. Department of Commerce, numbered 2315; prisoners in State prisons and reformatories, 1799.

LEGISLATION. The thirty-eighth regular session of the Legislature convened January 12, and adjourned May 3. It passed a law to submit to the voters in November, 1928, an amendment to the State constitution, to allow issue of \$35,000,000 of State road bonds, in addition to the \$50,000,000 previously authorized by vote in 1920. Another amendment proposal passed, for ratification at the same time, was to limit legislative sessions to 60 days, subject to extension by two-thirds vote of each house, as against an existing constitutional limit of 45 days, with like provision for extension. From 3½ cents, the State tax on sales of gasoline was raised by enactment to 4 cents the Legislature was called by Governor Gore in extraordinary session after its adjournment, and it convened June 4.

OFFICERS. Governor, Howard M. Gore; Secretary of State, George W. Sharp; Treasurer, W. S. Johnson; Auditor, Sam T. Mallison; Attorney-General, Howard B. Lee; State Superintendent of Free Schools, George M. Ford; Commissioner of Agriculture, John W. Smith.

JUDICIARY. Supreme Court: President, M. O. Litz; Associate Judges, W. N. Miller, Frank Lively, John H. Hatcher, Homer B. Woods.

WEST VIRGINIA UNIVERSITY. A co-educational institution of higher education at Morgantown, W. Va.; founded in 1867. In the autumn of 1927 the enrollment was 2750, of whom 1900 were men and 850 women. There were 1240 registered in the summer school of the same year. The faculty numbered more than 300. The libraries contained 92,000 volumes. During the year a new women's gymnasium was completed at a cost of \$272,000 and a new field house for men, to cost \$280,000, was under construction. John Roscoe Turner, Ph.D., was elected president to succeed Frank B. Trotter, LL.D., on July 1, 1928.

WHEAT. A summary of the world's wheat situation by the International Institute of Agriculture, Rome, placed the quantity of wheat available for export, for the year beginning Aug. 1, 1927, at 960,000,000 bushels and the probable requirements of importing countries at 775,000,000 bushels, and concluded that the available supplies of wheat were sufficient to meet all consumption requirements and to leave a large carry-over at the close of the year. During the corresponding preceding period 835,000,000 bushels out of an available supply of 960,000,000 bushels were exported. The total production of thirty-five countries in 1927 was 3,128,227,000 bushels, or 3.2 per cent more than the harvest of 1926 and 7 per cent above the average yield for the five years 1921-1925. The average in these countries was less than 1 per cent above that of the preceding year and 3.1 per cent above the average for the five-year period. The production of the leading countries, besides the United States, was reported as follows: Canada 444,282,000 bushels, India 334,050,000, France 284,353,000, Italy 202,087,000, Spain 145,597,000, and Germany 113,644,000. The yield of the Soviet Republics in 1926 was 819,565,000 bushels. The production of Argentina for the crop year 1926-27 was 22,826,000 bushels and of Australia 160,852,000. The Australian yield for the crop year 1927-28 was estimated at 110,000,000 bushels.

The wheat production of the United States in 1927, as estimated by the Department of Agriculture, was 871,691,000 bushels grown on 58,583,000 acres, the rate per acre being 14.9 bushels. In 1926 the production was 831,040,000 bushels, the area 56,337,000 acres, and the rate 14.8 bushels per acre. The average farm price on Dec. 1, 1927, was \$1.118 per bushel as compared with \$1.198 on Dec. 1, 1926. On this basis the total value of the crop of 1927 was \$974,694,000, and of the crop of 1926, \$995,954,000. Of the total area in 1927, 2,711,000 acres were in spring wheat and 37,872,000 acres in winter wheat. The production of spring wheat, including durum wheat, was 319,307,000 bushels at the rate of 15.4 bushels per acre and of winter wheat 552,384,000 bushels at the rate of 14.6 bushels per acre. As compared with the preceding year the spring wheat production was larger by 115,700,000 bushels and the winter wheat production smaller by 75,049,000 bushels.

Of the 25 States reporting spring wheat yields, the leading States and their production were as follows: North Dakota 124,970,000 bushels, Montana 65,952,000 bushels, South Dakota 44,303,000 bushels, Idaho 20,100,000 bushels, Washington 19,660,000 bushels, and Minnesota 18,080,000 bushels. The durum wheat production amounted to 76,155,000 bushels as against 43,981,000 bushels in 1926 and the yields per acre for the two years were 14.4 and 9.2 bushels respectively. The yields of durum wheat in the four leading producing states were as follows: North Dakota 55,916,000 bushels, South Dakota 16,401,000 bushels, Minnesota 3,538,000 bushels, and Montana 300,000 bushels. The yields of winter wheat in the leading States of the 39 States reporting were as follows: Kansas 111,283,000 bushels, Nebraska 70,868,000 bushels, Washington 33,684,000 bushels, Oklahoma 33,372,000 bushels, and Illinois 30,956,000 bushels. The average yields per acre ranged from six bushels in New Mexico to 28 bushels in Wash-

ington. The average farm price of winter wheat on Dec. 1, 1927, ranged from 92c. per bushel in Montana to \$1.55 in Alabama and Georgia, and the corresponding price of spring wheat from 94c. in Wyoming to \$1.75 in Maine. During the year ended June 30, 1927, the United States exported 156,250,000 bushels of wheat and 13,385,000 barrels of wheat flour, and imported 13,235,000 bushels of grain and 1,187,000 pounds of flour.

The cost of producing wheat in the United States in 1926, as determined by the Department of Agriculture on the basis of 5120 reports, was \$21.33 per acre and \$1.12 per bushel. The cost per bushel ranged from 98 cents in the South Central States to \$1.28 in the North Atlantic States. The results of another study indicated that in the last 40 years the average yield per acre had increased 17 per cent corresponding to an increase in the average annual production of 120,000,000 bushels. In 1927 a large part of the wheat in many sections was harvested with the combined harvester-thresher known as the combine. This year half of the wheat in Kansas was harvested with the combine, more than three hundred of these machines were used in Illinois, and over 50 in Indiana. Combines were introduced also into several Eastern states. See AGRICULTURE.

WHEELER, BENJAMIN IDE. American educator and former president of the University of California, died in Vienna, Austria, May 2. He was born at Randolph, Mass., July 15, 1854, and graduated from Brown University in 1875. For the next four years he was a teacher of the classics in the Providence, R. I., High School, and then was instructor at Brown. He went abroad in 1881 and studied at Leipzig, Heidelberg, Jena, Berlin, and Greece. He returned to America in 1885 to serve as instructor at Harvard and in 1896 went to Cornell University where he was professor of comparative philology, and two years later he became professor of Greek in addition. He served as a professor in the American School of Classical Studies at Athens, 1895-96, and was lecturer at Harvard University in 1898. He held the presidency of the University of California from 1899 until 1919. In 1909-10 he was Roosevelt Professor at the University of Berlin. When Professor Wheeler retired as the active head the enrollment of the University of California had reached nearly 20,000. He had honors conferred on him by almost all the great universities of the United States, and Heidelberg and Athens. He was the author of a number of scientific and educational works.

WHEELER, WAYNE BIDEWELL. American lawyer and general counsel of the national Anti-Saloon League, died at Battle Creek, Mich., September 5. He was born in Brookfield, Ohio, Nov. 10, 1869, and was educated at Oberlin College, where for nearly six years he paid his expenses by doing janitor's work, peddling books and rug-making machines and teaching in rural summer schools. He received an LL.B. degree from Western Reserve University in 1898. When a student at Oberlin young Wheeler was brought to the attention of the Reverend Dr. Howard H. Russell, one of the founders of the Anti-Saloon League, who was in search of an assistant. In May 1893 he accepted the position offered by Dr. Russell, and until his death he served on the

staff of the League, in both an administrative and legal capacity. He became a resourceful leader in the political activities of the organization especially in such campaigns as it undertook against Governor Myron T. Herrick. Mr. Wheeler became a national figure and won more than 2000 saloon cases, appearing often for the League before the United States Supreme Court. One of his many appearances before that tribunal was in the argument on the constitutionality of the Webb-Kenyon act.

When appointed counsel for the national Anti-Saloon League Mr. Wheeler moved to Washington and soon met opposition from the League's manager, Dr. Dinwiddie, with the result that Mr. Wheeler was sustained by the higher authorities of the League and Dr. Dinwiddie left the organization. Subsequently Mr. Wheeler directed the national political activities as well as the legal affairs of the League. He had a large part in the drafting of the Volstead act and in selecting as its introducer the Minnesota representative whose name it bears.

In June, 1926, when he was on the stand before the Senate select committee on campaign expenditures, Mr. Wheeler admitted that the Anti-Saloon League had spent \$35,000,000 to make the United States dry, and during the years 1917 and 1918 the organization disbursed \$2,500,000 a year. The outcry over poison alcohol brought Mr. Wheeler's name to the forefront again during the winter of 1926 when he insisted that alcohol must be made unfit for drinking. Mr. Wheeler was a member of the executive committee of the National Legislative Council of America, a member of the American Society of International Law and the American Academy of Political and Social Science. He was the Author of *The Federal and State Laws Relating to the Liquor Traffic*.

WHITE, FRANK. An American writer and lecturer on law, died in New York City on November 28. He was born in Deposit, N. Y., in 1858. After his admission to the bar in 1879 he began practice in Albany, N. Y. In 1905 he was lecturer on corporation law in Albany Law School, retaining that post for 20 years. Since 1925 he had lectured on the same branch of the law at the New York University Law School. His book, *White on Corporations*, is highly regarded by lawyers and legal teachers, the tenth edition being issued shortly before his death. He also wrote *White's Manual for Business Corporations* and was co-editor of *Dill on New Jersey Corporations*.

WHITE, HENRY. An American diplomat, died at Lenox, Mass., July 15. He was born in Baltimore, Md., Mar. 29, 1850, and was educated in private schools in the United States and France. He entered the diplomatic service in 1883 as secretary of legation at Vienna, and was transferred to London the year following as second secretary of the embassy, being promoted to secretary in 1886. In 1887-88 he represented the United States at the international Conference in London which abolished sugar bounties. He was recalled by Cleveland in 1893, but in 1897 was reappointed secretary at London under McKinley, and remained there until 1906. After serving as ambassador to Italy, Mr. White was appointed ambassador to France by President Roosevelt in 1907, remaining there until 1909 when his resignation was accepted by President Taft. In 1918 he was appointed by

President Wilson to serve on the American Peace Commission, and when the Treaty of Versailles was signed in 1919 Mr. White's signature appeared directly after those of President Wilson and Secretary of State Lansing. Ambassador White received the honorary degree of Doctor of Laws from Johns Hopkins University and St. Andrews University, Scotland, in 1915, and from Harvard in 1917.

WHITE, ISRAEL CHARLES. American geologist, died at Baltimore, November 24. He was born in Monongalia County, W. Va., Nov. 1, 1848, and studied at West Virginia University and at Columbia University. Entering geological work, he became assistant geologist of the second geological survey of Pennsylvania, 1875-84 and was the author of eight reports in connection with this work. In 1877 he was appointed professor of geology in West Virginia University, a position he held until 1892, when he resigned to assume charge of a large petroleum business. In 1897 he became State geologist for West Virginia, a position he held at the time of his death. He was consulting geologist for the Baltimore & Ohio R. R. Co., and for the Hope Natural Gas Co. He was chief of a coal commission that went to Brazil in 1904 and for two years made a study of mineral deposits in that country. Dr. White was a specialist in coal, petroleum, and natural gas, and made many discoveries in connection with the occurrence and development of these products. He was for many years treasurer of the Geological Society of America and in 1920 served as its president. He was president of the American Association of Petroleum Geologists in 1919-20, and vice president of the American Association for the Advancement of Science, 1896-97. In 1900 he was a member of the National Advisory Board on Conservation appointed by President Roosevelt. He was honored with the degree of LL.D. by West Virginia University in 1919 and with that of D.Sc. by the University of Pittsburgh in 1921. Dr. White presented to the city of Morgantown, W. Va., and to West Virginia University in 1900 coal land in Marion County of an estimated value of \$3,000,000, the revenue to be divided equally between the city and the University.

WHITE PINE BLISTER RUST. See BOTANY.

WHITFIELD, HENRY LEWIS. Governor of Mississippi, died at Jackson, Miss., March 18. He was born at Brandon, Miss., in 1869. He worked on farms and taught in country schools during his youth, and graduated from Mississippi College in 1895. After a course of law study at Millsaps College he became State Superintendent of Education from 1898 to 1907, and for the ensuing 13 years was president of the Mississippi State College for Women. He was elected Governor in 1923 on the Democratic ticket.

WHITNEY, MILTON. An American agriculturist and soil expert, died in Washington, D. C., November 11. He was born in Baltimore Md., on Aug. 2, 1860, and educated in the common schools and at Johns Hopkins, where he took a special course in chemistry. He became superintendent of the experimental farm of the North Carolina Experimental Station 1886-88, was professor of agriculture at the University of South Carolina 1888-91, and chief of the Bureau of Soils in the United States Department of

Agriculture since 1894. He was the author of *Soils and Civilization*.

WHOOPIING COUGH. There is considerable evidence that this acute contagious disease, which is known to be due to a specific micro-organism and which destroys much life by paving the way for acute broncho-pneumonia, owes much of its distressing symptomatology to a factor which has nothing in common with its infectious element. In other words, this affection, as far as its harassing paroxysms of cough are concerned, has been placed under the so-called allergic diseases (see ALLERGIC DISEASES) along with bronchial asthma and hay fever. It lately has been learned that a child in the early period of whooping cough—when there can be no likelihood of a spontaneous arrest—can be freed almost immediately of its paroxysms of cough by placing it in the allergic chamber; and that after a sojourn of from 4 to 7 days in the latter the cough permanently disappears. It is true that at the time of writing only a small number of children had been subjected to this test, but the results were so startling and unique that hardly any doubt can remain that a notable advance has been made in the treatment of children's diseases, and one which will be peculiarly welcome because little promise has ever been held out of conquering whooping cough by serums and antitoxins.

WICKSTEED, The REVEREND PHILIP HENRY. British economist, died at Childrey, Berkshire, on March 18. He was born in Leeds, Yorkshire, October 25, 1844, and was educated at University College, London, and at New College, Manchester. He followed his father into the Unitarian ministry in 1867. From 1874 until 1897 he was minister at Little Portland Street Chapel in London and it was during these years that his sermons, lectures and translations made him well known. From 1887 to 1918 he was a lecturer for the university extension movement, his courses being principally on political economy. His publications include: *Dante: Six Sermons* (1880); *The Alphabet of Economic Science* (1888); *Henrik Ibsen* (1892); *The Common Sense of Political Economy* (1910); *Dante and Aquinas* (1913); and *The Reactions Between Dogma and Philosophy* (1920).

WIGHT, FRANK CLINTON. An American engineer and editor, died at Summit, N. J., September 18. He was born in Washington, D. C., Feb. 26, 1882. After studying at Columbia University, 1899 to 1901, he entered Cornell and received the degree of civil engineer in 1904. In 1907, after several years of work in the field, he became associate editor of *Engineering News*, served as its managing editor from 1912 to 1917. He continued his services with the enlarged and consolidated publication, *Engineering News-Record*, and was appointed its editor in 1924.

WILLIAM AND MARY, COLLEGE OF. A co-educational college at Williamsburg, Va.; founded in 1693. The enrollment for the autumn semester of 1927 was 1203, of whom 570 were women and 633 were men. The summer session of 1927 had 847 students. There were 70 members on the faculty. The college had productive funds to the amount of \$147,687, and the income for the year was \$581,251. The library contained 50,000 volumes. President, Julian A. C. Chandler, Ph.D.

WILLIAMS, SIR RALPH CHAMPNEYS. A British explorer and administrator, died in London on June 22. He was born at Anglesey, Wales, Mar. 9, 1848. After leaving Rossall School his occupation until he was almost 40 years of age was travel and exploration in distant countries. He explored and hunted in Australia, Patagonia, Canada and Africa until his appointment in 1887 as consular agent in the Transvaal. He subsequently held administrative posts at Barbados, Bechuanaland and the Windward Islands, and finally ended his official career as governor of Newfoundland, 1909-13. His published works include: *The British Lion in Bechuanaland* (1887), and *How I Became a Governor* (1914).

WILLIAMS COLLEGE. A non-sectarian college for men at Williamstown, Mass.; founded in 1793. The enrollment for the autumn of 1927 was 815, of whom 812 were undergraduates and three graduate students. There were 79 members on the faculty, of whom five were absent on leave and 12 were new members. The productive funds amounted to \$5,427,493, and the income for the year 1926-27 was \$700,303. The library contained 120,500 volumes and 20,000 pamphlets. During the year the erection of a new gymnasium was commenced, and Lehman Hall, a new dormitory, was also begun. President, Harry Augustus Garfield, LL.D., L.H.D. See POLITICS, INSTITUTE OF.

WILLISON, SIR JOHN STEPHEN. A Canadian journalist, died in Toronto on May 27. He was born in Huron County, Ontario, Nov. 9, 1856, and educated in the local public schools. He engaged in journalism and for several sessions was parliamentary correspondent of the *Toronto Globe*. In 1890 he became editor-in-chief of this paper. In 1902 he became editor-in-chief of the *Toronto News*, and in that position contributed largely to the defeat of the Taft-Fielding reciprocity agreement of 1911 and the downfall of the Laurier administration. He was elected president of the Canadian Press Association in 1900, and in 1910 was appointed Canadian correspondent of the *London Times*. In 1913 he received a knighthood. He published: *The Railway Question in Canada* (1897); *Sir Wilfrid Laurier and the Liberal Party: A Political History* (2 vols., 1903); *The United States and Canada* (1908); *The New Canada* (1910), and *Personal and Political Reminiscences* (1914).

WILSON AWARDS. See WOODROW WILSON AWARDS.

WINDISCH-GRAETZ, PRINCE ALFRED OF. Austrian prime minister, died in Vienna on November 24. He was born in Prague Oct. 31, 1851, and belonged to one of the oldest feudal houses of the former Austro-Hungarian Empire. He was premier of Austria-Hungary in 1893-95.

WINDWARD ISLANDS. The name applied to a group of islands in the West Indies, comprising Grenada, St. Vincent, and St. Lucia, together with the Grenadines (which are one-half under Grenada and one-half under St. Vincent); forming the eastern limit of the Caribbean Sea between Martinique and Trinidad; a British possession. (See articles on the islands mentioned above.) Each of the islands is under its own government, but they are united for certain common purposes and have a court of appeals. Governor and commander-in-chief in 1927, Sir Frederick Seton James.

WIRELESS TELEGRAPHY. See RADIO TELEGRAPHY AND TELEPHONY.

WISCONSIN. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,632,067. The estimated population on July 1, 1927, was 2,918,000. The capital is Madison.

AGRICULTURE. The following table presents the acreage, production and value of the principal crops in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1927	3,651,000	7,236,000 *	\$89,886,000
	1926	3,596,000	6,043,000 *	88,839,000
Corn	1927	2,100,000	68,250,000	57,930,000
	1926	2,119,000	73,106,000	54,830,000
Oats	1927	2,432,000	93,247,000	43,826,000
	1926	2,577,000	96,638,000	38,655,000
Potatoes	1927	260,000	23,920,000	20,332,000
	1926	230,000	27,140,000	32,568,000
Barley	1927	620,000	21,890,000	16,042,000
	1926	521,000	17,974,000	11,683,000
Rye	1927	238,000	4,046,000	3,641,000
	1926	256,000	3,840,000	3,226,000
Tobacco	1927	31,000	31,620,000 *	6,008,000
	1926	29,000	33,350,000 *	4,602,000
Wheat, winter	1927	73,000	1,716,000	2,008,000
	1926	65,000	1,339,000	1,674,000
Wheat, spring	1927	72,000	1,426,000	1,668,000
	1926	63,000	1,260,000	1,588,000

* tons, † pounds.

MINERAL PRODUCTION. Pig iron formed the largest single item in point of value in the mineral production of 1925, and pig iron production further increased in 1926, being 235,597 long tons for 1926, as against 226,712 tons for 1925; in value, \$5,034,012 for 1926 and for 1925, \$4,836,952 for 1925. The mining of iron ore also increased, being 1,238,885 long tons for 1926; for 1925, 933,214 long tons. The product had a value, for 1926, of \$3,178,156; for 1925, of \$2,260,388. The important lime industry of the State was less active in 1926, shipments of lime producers being 215,000 short tons, as against 244,903 short tons in 1925; in value, \$1,886,000 for 1926 and \$2,204,504 for 1925. Stone production was large, being 2,541,360 short tons in 1925, the latest year of available records, and in 1924, 2,221,910 short tons; in value, \$4,208,201 in 1925 and in 1924, \$4,087,113. Zinc was produced in 1926 to the total quantity of 26,800 short tons, as compared with 20,230 short tons in 1925; in value, \$4,020,000 for 1926 and \$3,074,960 for 1925. Clay products totaled \$1,180,496, in 1925 and in 1924, \$1,063,164. The total mineral production of the State in 1925, duplications eliminated, was \$19,205,380; in 1924, \$15,796,720.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of general departments of the State government in the fiscal year ending June 30, 1926, were \$28,254,072; their rate per capita was \$9.86. They included \$3,277,006 apportioned or education. Totals not included in the above, of \$130,450 in interest and of \$9,173,072 in permanent improvement outlays brought the aggregate of State expenditure to \$37,557,603. Of this, \$10,676,213 was for highways; \$3,490,07 being for maintenance and \$7,185,506 for construction.

Revenue receipts were \$40,313,452; or per capita, \$14.07. Of their total, property and special taxes yielded 41.5 per cent, attaining a per capita rate of \$5.84. Earnings of departments

and compensation paid the State for officials' services furnished 8.5 per cent of revenue; 37.2 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a gasoline sales tax.

Net State indebtedness on June 30, 1926, was \$1,763,700, or \$0.62 per capita. Property subject to ad valorem taxation bore a valuation of \$516,994,450. State taxes levied thereon were \$7,141,180, or \$2.49 per capita.

TRANSPORTATION. The total number of miles of railroad line in the State on Jan. 1, 1927, was 7374.77. There were built in 1927, as reported by the *Railway Age*, 25 miles of second track.

EDUCATION. State aid to schools was materially extended. An equalization act was passed, providing \$5,800,000 for distribution in proportion to the number of teachers engaged by each district, and additional State aid was authorized, to be determined by the ratio of the number of teachers in a district to the assessed valuation of its taxable property. Physically handicapped children were provided with school transportation. The school code of the State was revised.

According to figures covering the scholastic year 1925-26, the school population of the state was reckoned at 877,792. There were enrolled in the public schools 513,456 pupils. Of these, 414,483 were in the elementary schools and 98,973 in high schools. The year's total of expenditure on public school education was \$49,473,939. Salaries of teachers averaged \$1365.

CHARITIES AND CORRECTIONS. The State Board of Control, as functioning in 1927, managed the charitable, mental and tubercular curative, correctional, reformatory, and penal institutions of the state. It supervised county tubercular sanatoria, insane asylums, jails, and poor houses and likewise the child-care and child-placing agencies. It served as a commission in lunacy, a parole board and a board of guardianship of dependent and neglected children. Hospitals under its management, with their populations on Dec. 1, 1927, were: Wisconsin State Hospital for the Insane, 746; Northern Hospital for the Insane, 645; Central State Hospital (criminal insane), 159; Wisconsin Memorial Hospital (insane), 273; Northern Wisconsin Colony and Training School (feeble minded), 1202; Southern Wisconsin Colony and Training School (feeble minded), 369; Wisconsin State Sanatorium (tubercular), 157; Tomahawk Lake Camp (convalescing tubercular), 20. Penal institutions were: Wisconsin State Prison, 993; Wisconsin State Reformatory, 557; Industrial Home for Women, 103. Correctional-educational institutions were: Industrial School for Boys, 391; Industrial School for Girls, 200. Educational institutions for the physically handicapped were: Wisconsin School for the Deaf, 195; Wisconsin School for the Blind, 131; Workshop for the Blind, 41; State Public School (crippled, neglected and dependent children), 440.

LEGISLATION. The Legislature convened in regular biennial session in January. The session lasted for some five months, and was the second longest in the history of the state; owing to dissension between the legislative majority and the governor, much of the programme of lawmaking failed of passage, and revenue measures were judged insufficient to meet the appropriations made. The state income tax law was revised to the effect that payers with fluctuating

tuating incomes might base their payments on the average incomes of two or three years, the reckoning beginning with the 1926 income. Instead of income exemptions previously allowed for the individual payer, for wife and for dependent children, there was substituted a tax credit of about 1 per cent of the previous exemption, this credit to be deducted from the payer's total tax. As the tax rate continued graduated according to income, the change was calculated to oblige the payer to yield on the average several dollars more each year. By statute it was made necessary after Jan. 1, 1928, for drivers of motor vehicles in the state to obtain operators' licenses, which might not be granted to persons physically or mentally incompetent or to minors under 16 years of age.

POLITICAL AND OTHER EVENTS. The State tax law, in such of its provisions as had empowered the municipalities to levy an ad valorem tax on National Bank capital, was declared by the United States Supreme Court March 21 to be unconstitutional. The banks had opposed the tax for several years, refusing to pay it in advance of judicial settlement of their contention. Milwaukee alone claimed \$900,000 as due it. Through the decision the municipalities lost their claims. National banks in Milwaukee offered the city September 21 a voluntary payment of \$235,000 as a self-assessed contribution to government costs, which a committee of the city council accepted. The State Supreme Court June 19 held unconstitutional the act of 1925 prohibiting the manufacture and the sale of oleomargarine mingled with milk or milk fats to render it more like real butter. The state water power statute giving the State Railroad Commission authority to control dam construction and repair by the issue of permits was found valid May 31, by the United States Supreme Court.

The Highway Commission reported in November that in the season just closed 1740 miles of surfaced highway had been built in the state, the highest number in any year up to then, and that maintenance and construction expenses of the state highway system for the year had totaled \$19,784,546. The State Board of Health rendered in April a report on a two years' survey of the water supplies, sewage systems and industrial waste disposal arrangements.

At Milwaukee the county board of supervisors awarded a prize for a court house design to a New York architect, Albert Randolph Ross, as winner of a public architectural competition. Opponents of the court house project, which had been approved by popular vote in 1920 and later, in 1925, rejected, brought action in courts to prevent the retaining of the architect, asserting that the execution of his plan might cost as much as \$30,000,000. Judge Fowler, at Fond du Lac October 28, denied an injunction. The practice known as "ambulance chasing," which consists in the solicitation of business by attorneys from persons having occasion to bring suit for damages, chiefly in accident cases, was investigated by a body of three circuit judges, in accordance with the petition of the Lawyers' Club of Milwaukee County. The judges ordered change of attorneys in some 200 cases where champerty was alleged or established.

OFFICERS. Governor, Fred R. Zimmerman; Lieutenant Governor, Henry A. Huber; Secretary of State, Theodore Dammann; State Treasurer,

Solomon Levitan; Attorney General, John W. Reynolds; State Superintendent of Schools, John Callahan.

JUDICIARY. Supreme Court: Chief Justice, Aad J. Vinje; Associate Justices, Marvin B. Rosenberry, Franz C. Eschweiler, Walter C. Owen, Christian Doerfler, Charles Crownhart, E. Ray Stevens.

WISCONSIN, UNIVERSITY OF. A State institution of higher education at Madison, Wis.; founded in 1848. The enrollment for the autumn of 1927 was 8942, distributed as follows: letters and science, 6514; engineering, 962; agriculture, including home economics, 724; law, 202; medicine, 255; music, 154; library, 41. For the summer session the enrollment totaled 5165, with the following distribution: letters and science, and medicine, 4387; engineering, 209; agriculture and home economics, 295; law, 109; music, 116; library, 40. In the autumn of 1927 the faculty numbered 1202, of whom 279 were new members. The productive funds of the University amounted to \$892,148.68, and the income for 1926-27 to \$8,343,784.93. The library contained 771,000 volumes and 378,000 pamphlets. During the year the course in commerce and the course in journalism were changed to the school of commerce and the school of journalism, with two years of letters and science work required for entrance, and a new experimental college, under the direction of Dr. Alexander Meiklejohn, formerly president of Amherst College, was opened with an enrollment of 119 Students. President Glenn Frank, M.A., Litt.D., L.H.D., LL.D.

WOMAN'S CHRISTIAN TEMPERANCE

UNION. A non-partisan and non-sectarian national movement which has as its purpose the protection of the home by the abolition of the liquor traffic. It has branches in every state in the Union, in the District of Columbia, Alaska, and the insular possessions, and a young people's branch comprising both young men and women, who are united for temperance and prohibition. The official organ of the Union is *The Union Signal*, and *The Young Crusader* is published for boys and girls. The officers in 1927 were: President, Mrs. Ella A. Boole; vice president at large, Mrs. Ida B. Wise Smith; corresponding secretary, Mrs. Anne Marden De Yo; recording secretary, Mrs. Nelle G. Burger; treasurer, Mrs. Margaret C. Munns. The main headquarters are at Evanston, Ill.; the legislative headquarters are at the Hotel Driscoll, Washington, D. C.

WOMEN IN INDUSTRY. The Women's Bureau of the U. S. Department of Labor is not only the centre for information of progress in this field but of activity as well. Despite continually reduced budgets this Bureau was worked to improve the economic status of the eight and one-half million women gainfully employed. The 1927 budget was \$100,000.

During the year 1927 the Women's Bureau reported that Arizona's legislature amended its labor code to provide for women a six-day and 48-hour week. New York, too, passed a law, affecting factories and mercantile establishments, to provide women an eight-hour day and a 48-hour week. A week of 49½ hours is permitted for 5½ working days. An additional 78 hours of overtime annually is permitted.

Supplementing the 18 State surveys already completed, the Bureau published three addition-

l survey's during the year, viz., Women in Delaware Industries; Women in Tennessee Industries; Women in Mississippi Industries.

MISSISSIPPI. This survey was made in 1925. It included the work of 2853 women (one-fifth of whom were negro) employed in 81 establishments, in 25 cities. Of the women surveyed, two-thirds worked in factories, one-fifth in stores, and the remainder in laundries. It was found that more than 35 per cent of the women had a working day of more than 10 hours. Only three per cent had a day of 8 or less than 8 hours. For white women, the median of weekly salaries was \$8.00; for negro women it was \$5.75. Twenty-two per cent of the women were married. For the white women the following was the distribution: one-sixth were widowed, separated or divorced. More than one-third of the negro women fell into this classification. As for age distribution, 38 per cent of all the women fell between 20 and 30 years, while 14.5 per cent of the white and 18.5 per cent of the negroes were 40 years and over.

TENNESSEE. This study was made in 1925 and included 16,596 women of whom 8.6 per cent were negro and almost all the rest native born white women. In 28 cities 216 plants were examined, in which the employees were distributed as follows: four-fifths in factories, one-tenth in stores, the remainder in laundries. As for hours, 5 per cent of the women had a working day of 10 or more, while only 6 per cent had a day of 8 hours or less. For white women, the median of weekly earnings was \$11.10 as against \$6.95 for negro women. For both white and negroes, 40 per cent were married, 20 per cent were widowed, separated or divorced, and a little under 50 per cent were single. The ages were as follows: 68 per cent were under 30 years (at least half being under 25 years) and 15 per cent were 40 years and over.

DELAWARE. This study, made in 1926, included 4176 women, of whom 6.5 per cent were negro and a slight proportion were foreign-born. In 29 cities 146 establishments were studied in which the workers were distributed as follows: 56 per cent were in factories, 26 per cent were in canneries, 11 per cent were in stores, the remainder were in laundries, hotels and restaurants. Less than 10 per cent of the women in factories, stores and laundries worked as much as 10 hours daily; 15 per cent had a day of 8 hours or less. For white women in factories, stores and laundries the median of weekly earnings was \$11.05; for the white women in hotels and restaurants it was \$10.15; for those in canneries it was \$9.40. For negro women in canneries the median wage was \$5.55. One-third of the white women were married and one-eighth were widowed, separated or divorced. Sixty per cent of the white women and 58 per cent of the negroes were under 30 years (14.5 per cent of the white and 11.7 per cent of the negroes being under 18 years).

INDUSTRIAL ACCIDENTS. The Women's Bureau published a study of the effects of industrial accidents to women in the States of New Jersey, Ohio, and Wisconsin over the period July 1, 1919, to June 30, 1920. It was found that in New Jersey there had been 1096 compensable accidents to women, 1545 in Ohio and 644 in Wisconsin. The majority of the accidents had occurred in manufacturing industries, while 15 per cent of the injured women had worked as

clerks, etc. At least one-half of the accidents to women in manufacturing establishments were due directly to machinery. The following were the relative hazards of the different industries: in the metal trades there were 40 accidents per 1000 employees over the year, in iron and steel plants there were 27 accidents per 1000, and in the food-product plants 22 accidents per 1000 women employees.

Of the 3285 cases examined there had been 15 fatalities and 536 permanently disabled. Of the latter, 385 women were interviewed to ascertain what adjustments had been effected. The report said: "Almost half of these were responsible for the support of other persons in addition to themselves. Over one-third of the women had been working less than six months at the occupations they were engaged upon when injured. Two-fifths of the women were disabled for their former work; one-tenth were disabled for all available work. Of those who returned to industry 79.6 per cent went back to their former employer, but almost one-fourth of these were laid off soon or found it necessary to quit on account of the disability. Over one-fourth of the women who returned to work had not at any time since the accident earned as much as they had earned before."

TURNOVER. The Women's Bureau published a study of the change of jobs of 97 women who had attended the Bryn Mawr summer school in 1925. About 50 per cent of these women had been in industry 10 years or more and only 14 per cent had been working less than six years. At least three-fifths of the women had held their positions less than two years, one-fourth for less than one year, and six for less than six months. The histories of some were amusing. One worker was employed successively as follows: as a domestic, in a lamp factory, a noodle factory, glass manufacturing concern, lamp factory, battery factory, domestic service, lamp factory, casket factory.

The report concludes as follows: "Among the industrial factors found conspicuously associated with short jobs are: (1) The seasonal nature of business, (2) the character of management under which production is carried on, and (3) the monotony and routine of the work itself. The last of these appears to have become permanently established in modern machine industry. On the other hand, changes affecting the first two factors are now taking place. Constant effort is being made to regularize industry, and in many instances dull periods have been shortened and sometimes eliminated."

MINNESOTA. The Industrial Commission of Minnesota published the following wage summaries:

<i>Wages per week</i>	<i>Number</i>	<i>Per cent</i>
Less than \$12	8,457	10.2
\$12 and under \$15	9,440	27.9
\$15 and under \$20	11,638	34.5
\$20 and over	9,249	27.4

OHIO. The Information Bureau on Women's Work (Toledo) published a report based on a study of women's wages in Ohio. A total of 281,112 women were examined, of whom 176,600 were "wage earners," 32,553 saleswomen, and 71,959 in clerical occupations. Over one-third of the women were working for less than \$15 a week although (says the report) "studies of the cost of living have shown amounts ranging from \$17 a

week in the smaller towns, to \$21 a week for the larger centres, as necessary for a 'health and decency' standard."

WOMEN'S CLUBS, GENERAL FEDERATION OF. An organization founded in 1889 and chartered by Act of Congress Mar. 3, 1901. It is composed of local clubs in the United States and other countries, and its purpose is "The Betterment of Life." In addition to local clubs there were, in 1927, seventeen national organizations and sixty-four clubs, in foreign and territorial countries, affiliated with the Federation. It is governed by a General Board, and the work is divided into eight departments: American citizenship; the American home; education; fine arts; international relations; legislation; press and publicity; and public welfare. Other activities, not in departments, include: Federation extension through the organization of clubs in rural districts and the organization of juniors in senior clubs; contact with clubs and organizations in other countries; medical scholarship loan; exchange Pan-American scholarship; co-operation with war veterans; and work for better films in motion pictures. In 1927 a survey of adult illiteracy with a view to its elimination was made. The official organ is the *General Federation News*. Headquarters are at 1734 N Street, N. W., Washington, D. C. Mrs. John D. Sherman was president and Miss Josephine Junkin, director of headquarters.

WOOD, LEONARD. An American soldier and colonial administrator, died in Boston, Mass., on August 7. He was born in Winchester, N. H., Oct. 9, 1860, the son of Charles Jewett Wood, an eminent physician. Leonard Wood's early schooldays were spent in Pocasset, Mass. and at Pierce Academy, Middleboro, Mass. He then went to the Medical School of Harvard University and was graduated a doctor of medicine in 1884. For a year thereafter he was house surgeon at the City Hospital, Boston, and then practiced medicine in that city. He was appointed an assistant surgeon in the U. S. Army on Jan. 5, 1886, and the same year was assigned to duty under Captain, afterwards General, H. W. Lawton in a campaign against the Apache Indians, under Chief Geronimo. It was Lawton's task to track down the hostile Indians and Lieutenant Wood was foremost in the long chase of 2400 miles. In this campaign he served in the line as a fighting officer, and for his achievements he was awarded the Congressional Medal of Honor. He was promoted to captain Jan. 5, 1891, and served as attending surgeon at several posts and forts in the Southwest, and at the Presidio, San Francisco, and at Fort McPherson, Ga. On the outbreak of the Spanish-American War in 1898, Captain Wood became colonel of a regiment of cowboys and others organized by Theodore Roosevelt, who had resigned as Assistant Secretary of the Navy. In this regiment, the First United States Volunteer Cavalry, soon to be known as the "Rough Riders," Roosevelt was commissioned lieutenant colonel, and the command was among the first organizations sent to Cuba. At the engagements at Las Guasimas and San Juan Hill, Colonel Wood and his regiment played a prominent part and he was

promoted on July 8, 1898, to the rank of brigadier general. After the surrender of the Spanish forces at Santiago de Cuba General Wood was made military governor of the city, later being given the command of the Department of Santiago.

On December 7, he was promoted to the rank of major general of volunteers, and on Dec. 20, 1899, he arrived at Havana to be military governor of Cuba, succeeding General John R. Brooke.

A great achievement of General Wood was the elimination of yellow fever. As a result, it was stated, subsequently not a single case of yellow fever originated in Havana. On May 20, 1902, General Wood formally transferred to Tomás Estrada Palma and his associates the government and control of the island and announced that American military occupation of Cuba was ended.

In March, 1903, General Wood was sent to the Philippine Islands to command the Department of Mindanao and to be the civil governor of the newly organized Moro province, comprising the Mohammedan portion of the archipelago. He was made a major general in the regular army Aug. 8, 1903. For three years he labored in these islands and the once turbulent Mohammedan islanders became orderly and loyal. In 1906 he was made commanding general of the entire Philippine Department and held that post until November, 1908, when he returned to the United States to become commander of the Department of the East with headquarters at New York, a command he again held after 1914 after he had served as chief of staff of the U. S. Army. Previous to the entry of the United States into the World War General Wood was active and unceasing in his efforts to promote national defense and preparedness measures. It was his personal influence that resulted in the establishment of civilian training camps of which those at Plattsburg were most conspicuous and successful in training men to become officers.

General Wood was assigned to command the Southeastern Department in 1917, and here he was active in training and commanding the Eighty-ninth National Army Division at Camp Funston, Kansas.

When the Armistice was signed General Wood was training the Tenth Regular Division at Camp Funston. On Jan. 15, 1919, he was assigned to the command of the Central Department with headquarters at Chicago, and on Oct. 5, 1921, he was retired. General Wood was a candidate for the Republican nomination for the presidency in 1920 but was defeated by Senator Warren G. Harding. General Wood went to the Philippines as Governor General in 1921, assuming office on October 15, and he devoted himself to bringing the government into harmony with the ideas of the new administration. The Filipinos had permitted the promising work of leprosy control to fall into a state of inefficiency. On July 26, 1926, General Wood issued an appeal to the United States for private citizens to raise a fund of \$2,000,000 to stamp out the disease. At that time he said the plague could be eradicated by 1932 if the fund were raised. This money was to go for the erection of a modern laboratory at the Oulion leper colony, south of Manila, and for an endowment to engage competent medical men. Other parts of the endowment were to go for segregation work and the

improvement of diet, living conditions and service. See LEPROSY.

Among other reforms in the Philippines was the institution of a rigorously economical government, wherein all waste was cut to a minimum. General Wood was opposed by a growing party in the islands that were vociferous in their demands for immediate independence, and he was hampered greatly by the native assembly.

Before returning to the Philippines General Wood had been elected by the University of Pennsylvania to be its provost, and secured a year's leave of absence from its service. But by the close of 1922 it was evident to him that there was so much to be done in the islands that it would be most unfortunate for him to leave his post at Manila. Accordingly, he resigned as provost of the university and devoted himself to the arduous task before him.

The honorary degree of LL.D. was bestowed upon General Wood by Harvard University in 1899, Williams College in 1902, the University of Pennsylvania in 1903, Princeton University in 1916, the University of the South and the University of Georgia in 1917, the University of Michigan in 1918 and Union College and Wesleyan University in 1919. His published works include: *The Military Obligation of Citizenship* (1915); *Our Military History* (1916); *National Defense* (1917); *Universal Military Training* (1917).

WOODBURY, FRANK W. An American medical writer, died in Philadelphia on May 24. He was born in Philadelphia in 1849, and graduated from Jefferson Medical College in 1877. During his early professional career he translated many French and German medical works and wrote for medical journals. He became assistant and subsequently editor-in-chief of the *Philadelphia Medical Times* and a member of the staffs of other medical journals in Boston and New York. Dr. Woodbury was professor of therapeutics and clinical medicine in the Medico-Chirurgical College from 1880 until 1892. He created and edited with Dr. R. J. Dunglison *The College and Clinical Record*.

WOOD PULP. See FORESTRY; PAPER.

WOODROW WILSON AWARDS. In January Norman H. Davis, president of the Woodrow Wilson Foundation, announced receipt of a special donation of \$50,000, to be offered in two awards of \$25,000 each to the young men and women of America for the best two essays on "What Woodrow Wilson Means to Me." These awards were independent of the regular Foundation award of \$25,000 which was given in 1926 to Elihu Root, for his services to the cause of peace in helping to organize the World Court. The awards were available to any resident of the United States between the ages of 20 and 35. The essays had to be not more than 2500 words in length, and should seek to appraise, not the acts, but the ideals and principles of Wilson, from the personal standpoint of the writer. Partisan political considerations were, therefore, outside the scope of the contest.

Later the Foundation decided to increase the scope of the contest by adding 92 smaller prizes totaling \$7000. None of the 10,000 essays submitted was considered worthy of either first or second prizes by the Jury of Award. Third prizes of \$100 each were awarded to the writers of fourteen essays "without distinction of place" and the writers of thirty more received honorable

mention. The trustees announced that while the decision of the Jury of Award was binding upon the trustees, as well as upon the contestants, the board would consider the matter thoroughly and announce later what was to be done with the fund especially donated for this purpose. Seven men and as many women were chosen as recipients of third prizes.

WOOL. The wool clip of the United States, as estimated by the Department of Agriculture, was 272,453,000 pounds in 1927. This compared with 260,975,000 pounds in 1926, and 253,907,000 pounds in 1925. Wool prices remained on a steady and firm level, fairly profitable to growers. The number of sheep and lambs on farms and ranges at the beginning of 1927 was reported at 41,909,000, an increase of over 2,000,000 head, or 5 per cent, over the preceding year. Imports of combing and clothing wool were approximately 100,000,000 pounds less in 1927 than in 1926. This reflects the decline in use of wool for clothes and the substitution of silk, rayon, and cotton, and the effect on woollen manufactures. A campaign was started to increase the use of wool for clothing, five leading associations uniting to form the Wool Council of America, with plans to bring woollen goods back into popular favor. The Eastern Wool Growers' Association, Inc., was formed with headquarters at Baltimore, through which Virginia, West Virginia, and Maryland growers were expected to market more than 500,000 pounds of wool during the year.

Standards for wool, including twelve grades based on the numerical count system, a refinement of the seven grades previously promulgated by the U. S. Department of Agriculture, were approved by representatives from all branches of the wool industry of America. The range is from 36's to 80's. Prior approval of these grades by the Bradford Wool Federation made possible the conduct of business in the American and British wool trade on the basis of a uniform set of standards. Other European countries indicated a purpose to adopt these grades. A decision of the U. S. Supreme Court in May defined the term "wool commonly known as clothing wool," used in the Emergency Tariff Act of 1921, as covering all wools other than carpet wool. This reversed a decision of the Court of Customs Appeals, which had held that clothing wool was wool used in the carding process, as distinguished from that used in the combing process in the making of cloth.

Conferences between United States officials and members of the wool trade were held to determine upon a classification schedule to be used in the collection of international statistics on wool. This move for a schedule to be used uniformly by the leading wool-producing and consuming countries of the world was the immediate outcome of action taken at the Imperial Conference at London, the recommendations of which were submitted to the United States. The conference agreed upon a classification schedule, including quality, condition, weight, and value of wool passing in international trade, the volume of world woollen stocks to be determined semi-annually as of April 1 and October 1, with monthly reports on imports, exports, and re-exports of wool, and a monthly survey of wool consumption by mills.

An Italian synthetic wool recently placed on the market was found on examination to con-

sist of short lengths of fine fibres resembling wool, but it was declared inferior to the real product.

Studies at the Kansas Agricultural Experiment Station showed that silk and wool had a considerably higher protective value against burning of the skin than cotton or linen (*Journal of Agricultural Research*, vol. 35, p. 251.) A German investigator had shown that wool offers more resistance to the disintegrating action of the sun than silk, cotton, or linen. See LIVE-STOCK.

WOOLSON, IRA HARVEY. An American civil engineer, died in Chicago, Ill., May 8. He was born in Niagara County, N. Y., Aug. 11, 1856, and was graduated from the School of Mines, Columbia University, in 1885 with the degree of M.E. He afterwards served two years in the New Jersey Geological Survey, and in 1886 returned to Columbia as assistant in assaying and drawing. In 1891, while instructor in mechanical engineering, he developed at the university the testing of fireproof materials, and established special laboratories. He continued in that work for 23 years, being made adjunct professor of civil engineering in 1908. He was the author of many technical articles on fire protection, and was appointed chairman of the building code committee of the Department of Commerce by Secretary Hoover in 1921.

WORCESTER POLYTECHNIC INSTITUTE. A non-sectarian institution for the technical education of men at Worcester, Mass.; founded in 1865. The enrollment for the autumn of 1927 totaled 583, distributed as follows: mechanical engineering, 133; civil engineering, 74; electrical engineering, 171; chemistry, 42; general science, 2; and 161 freshmen, all of whom take the same course of study. The faculty numbered 63. The productive funds of the institute amounted to \$2,800,000, and the income for the year to \$308,000. There were 29,000 volumes in the library. Sanford Riley Hall, a freshman dormitory, was completed. President, Ralph Marle, Captain, U.S.N., retired, D.Sc., D.Eng.

WORK, BERTRAM G. An American manufacturer, died at St. Moritz, Switzerland, on August 30. He was born in Staten Island, N. Y., Jan. 9, 1868. Leaving Sheffield Scientific School at Yale after his freshman year in 1889, he entered the employ of the Goodrich Rubber Company and won promotion through successive grades until he was elected president of the concern in 1907, a post he held at the time of his death.

WORKMEN'S COMPENSATION. A complete review of this subject, through the legislative sessions of 1926, was presented in a U. S. Bureau of Labor Statistics Bulletin. It was shown here that compensation laws were to be found in all the Canadian provinces and in all the States except 5 and the District of Columbia. The first American compensation laws appeared in 1910; thenceforth the remainder followed rapidly until 1919; only 3 new States were added. In all the States benefits cover fatal as well as non-fatal injuries. (The only exception in the case of fatality benefits is that of Oklahoma.) Medical and surgical benefits are also furnished in all States. In most of the States, benefits are based on stated ratios of the average wages, ranging from 50 per cent in 16 States to 66 2/3 per cent in 12. The maximum totals run from \$8000 to \$7800 for death and from \$3000 to

\$10,000 for permanent total disability. Some States establish no limit at all. All but three States require employers to carry compensation insurance. In 19 States there are State insurance funds while in eight of these the State funds are the only ones permitted to operate.

New York. The 1927 report of the New York State Industrial Commissioner (for the fiscal year ending June 30, 1926) contains an interesting discussion of the State's insurance fund. The commissioner points out that the State fund is complete in security and coverage and has the confidence of insuring employers. A large proportion of the employers insuring in the beginning of the fund still are carrying policies. For the calendar year 1925 premiums written amounted to \$4,246,429, an increase of 9 per cent over 1924. On Dec. 31, 1914, assets of the fund were \$654,494; by Dec. 31, 1925, they had increased to \$10,304,743. Policies were written at premium rates 15 per cent lower than those of stock-company insurance, and for the last few years the State fund had been paying a stock dividend of 15 per cent, making a net gain of 27 1/4 per cent over stock-company rates. The fund also carries on inspection, safety service, accident prevention, and rehabilitative work. The State fund's expense ratio is 182 per cent, as compared with the 42 per cent ratio of the largest 17 private companies.

This State reported that during the year ended June 30, 1927, 27 boys and girls under the age of 18, and who were illegally employed, were awarded double compensation for injuries received. Nineteen of the children injured were at work on machines which they were specifically prohibited by law from operating. Twenty of the 27 children received some form of permanent disability. By law, the employer alone is responsible for the increased compensation and these 27 cases cost the employers \$22,808. The insurance carriers had to pay a like amount.

KANSAS. During the year a revision of the State's compensation act went into effect. It included, among other changes, the following: Administration was transferred from the courts to the Public Service Commission. Coverage was extended to include motor transportation and building work. Death benefits were raised to \$4000 and the weekly maximum for disability to \$18. Burial expenses were allowed in all cases. Provision was made for permanent loss of use and for permanent partial loss of use of a member, and also for traumatic hernia. An important addition was compulsory insurance.

MASSACHUSETTS. A workmen's compensation commission, reporting on the workings of the law in this state, approved the underlying principle of the law. It suggested the following changes: The inclusion of persons employed in violation of law. That "street cases" be made compensable when the employee was engaged in the furtherance of his employer's business. That occupational diseases be definitely included. That the maximum benefits be increased to \$6400. That the maximum weekly allowance be increased to \$19. The most important change suggested to the commission was the adoption of a state monopolistic fund, but this the commission rejected. It did recommend increasing the Insurance Commissioner's power over premium rates.

NORTH DAKOTA. In the single year 1926 North Dakota's State insurance fund saved employers \$200,052. The actuaries said in their report:

"It costs North Dakota employers through its workmen's compensation fund 11.1 cents to pay \$1 benefits to injured workmen. On the insurance company basis it would cost North Dakota employers, through insurance companies, 56.2 cents to pay \$1 benefits."

CONVICTS. In 1927, Maryland and Wisconsin extended their workmen's compensation laws to apply to convicts. These were the first two States to take such action.

UNITED STATES. The new Federal Longshoremen's and Harbor Workers' Act went into effect July 1. Its purpose is the protecting of longshoremen and harbor workers when the injury occurs on navigable waters, including dry docks. The following groups are excluded: masters and crews of vessels; workers loading, unloading or repairing vessels under 18 tons; Federal and state employees. A United States Employees' Commission is set up to administer the act, and 14 district offices are established. For injury, the percentage of wages is 66%, weekly maximum is \$25, weekly minimum is \$8, the total maximum payment for injury or death is \$7500. Death benefits are made up of a portion of the wages, depending upon the number of dependents. Widows, during widowhood, continue recipients of benefits and upon remarriage obtain a lump sum of two years' compensation. A burial allowance of \$200 is also granted. Non-resident aliens are entitled to full benefits. Dependents of these, however, are limited to widow and children or one parent. Occupational diseases are included as compensable. Full medical care is provided. There is a maintenance allowance of \$10 weekly during the period of rehabilitation. The waiting period is one week, retroactive after seven weeks.

An interesting sidelight on the law's passage is that it extends workmen's compensation into the five Southern States—North Carolina, South Carolina, Florida, Arkansas, Mississippi—that are still without protective legislation. The passage of the Federal Compensation Act now leaves only two groups of employees without protection from accident, seamen and railroad workers engaged in interstate commerce.

It is interesting to note the operation of the Federal act. Commissioner Jerome G. Locke of the New York District announced that by the end of the year more than 5800 accidents to longshoremen and other employees on harbor craft had been reported to his office during the six months of activity (July 1–December 1). Of these, fully 4000 had been settled on the basis of the new law, without a single appeal having been taken to the courts. Of the 5861 cases reported in the year, 17 were fatal and 291 were under the head of improper jurisdiction. Of the 4000 settlements made only 12 were on the basis of formal hearings.

LEGISLATION. No new States, during 1927, joined the roll of workmen's compensation States. There was, however, a considerable amount of supplemental legislation passed. The outstanding features of these laws, in the various States and in the United States, which are abstracted from the December *American Labor Legislation Review*, are reviewed here briefly:

Alaska. Compensation raised to 65 per cent of wages; death benefit raised to \$4500; compensation for permanent disability also increased.

California. State fund may insure employers liable under Federal longshoremen's act; agricul-

tural employers and employees are presumed to have accepted the state act unless notice of rejection is given.

Connecticut. Compensable hernia is defined and so is compensable occupational disease. Number of weeks for which compensation payment is made is increased.

Idaho. Public officials are included. On application of employer, agricultural workers and domestic servants may be brought into act. For total disability, where worker has children, minimum weekly compensation is to be \$8 for a period of 400 weeks.

Illinois. Payment of death benefits to widow ceases on remarriage if no children exist. Employments where creosote or other preservatives are used are included under act. Death benefits, where there are dependent children, are increased. Compensation for death or injury of an illegally employed minor is increased by 50 per cent. The compensation time for certain injuries is also increased.

Indiana. Weekly minimum and maximum wages are raised to \$16 and \$30.

Kansas. A new law is reenacted. Law to be administered by a Public Service Commission; employers must insure with an authorized company or become self-insurers; state regulation of insurance companies is provided; death benefit raised to \$4000; weekly maximum for death and total disability raised to \$18; employers liable for \$100 and sixty days of medical care.

Maryland. Minors illegally employed are to receive double compensation. The employer alone is responsible for the extra risk. The act is to cover convicts in the state penitentiary and house of correction.

Massachusetts. Weekly maximum raised to \$18 and total maximum payment for total or partial disability raised to \$4500.

Michigan. Wage percentage raised to 60% weekly. Weekly maximum raised to \$18. Total maximum for disability raised to \$9000. Minors between 16 and 18 years illegally employed are to receive double compensation. Alien dependents residing outside the United States and Canada are to receive two-thirds of benefits. Payment to a dependent child ceases at 21 years.

New York. Weekly maximum raised to \$25. Maximum allowance for total disability raised to \$5000; for partial disability to \$4000.

North Dakota. Total maximum payment in case of total disability is limited to \$15,000. Death benefit limited to \$15,000.

Pennsylvania. Waiting period reduced to seven days. Compensation is raised to 65 per cent of weekly wages; maximum is raised to \$15 weekly and minimum to \$7. Hernia to be compensable must be reported in 48 hours. Death benefits for dependent children are raised.

Rhode Island. Changes made in length of time payments are to continue for loss of members. **Tennessee.** Maximum weekly compensation fixed at \$18. Compensation of widow who remarries is to pass to her dependent children.

United States. The monthly maximum for total or partial disability is raised to \$116.66 and the minimum for total disability to \$58.33. Minimum monthly wage raised to \$87.50; maximum to \$175. Burial allowance raised to \$200.

Vermont. Medical liability increased to \$50 for surgical and medical services and \$150 for hospital services.

Washington. Compensable hernia is defined. "No payment shall be made to any beneficiary residing in a country with which the United States does not maintain diplomatic relations when such payment is due." The schedule of permanent partial disabilities is increased.

Wisconsin. Inmates of State institutions, permanently disabled during their employment, are to receive upon the discharge the same compensation as if covered by the act. The maximum is, however, \$1000. Schedule of benefits for permanent partial disabilities revised.

WORLD ALLIANCE FOR INTERNATIONAL FRIENDSHIP THROUGH THE CHURCHES. See PEACE AND PEACE MOVEMENTS, under *International Good-will*.

WORLD CONFERENCE ON FAITH AND ORDER. A general meeting at Lausanne, Switzerland, Aug. 3-21, 1927, considered the matters of faith and order on which the various Christian churches disagreed rather than defined conditions for future union. It was attended by over 400 delegates, representing 87 separate Christian churches, including the Orthodox, Old Catholic, Anglican, Lutheran, and Evangelical communions, while the Roman Catholic and British Baptist Churches declined the invitation. Representation was by religions on a basis proportionate to the number of communicants in the churches represented. This conference was an outgrowth of the Universal Conference of the Church of Christ on Life and Work at Geneva in 1920, rather than of the Stockholm Conference of the Church of Christ on Life and Work, which met in 1925, and unlike the latter, which was devoted primarily to seeking cooperation on ethical matters, it dealt with theological subjects. The matters considered had to do principally with faith and with creeds, or a personal confession of one's faith in Christ, and with order, which had to do with an episcopally ordained ministry as against a non-episcopally ordained ministry. The most significant accomplishment of the Conference was the unanimous adoption of a report on "The Church's Message to the World," to which churches all over the world were able to subscribe. It read:

We, members of the World Conference on Faith and Order, met at Lausanne, August 3-21, 1927, and agreed in offering the following statement to the several Churches as the message of the Church to the world:

(1) The message of the Church to the world is and must always remain in the Gospel of Jesus Christ.

(2) The Gospel is the joyful message of redemption, both here and hereafter, the gift of God to sinful man in Jesus Christ.

(3) The world was prepared for the coming of Christ through the activities of God's Spirit in all humanity, but especially in His revelation as given in the Old Testament; and in the fullness of time the eternal Word of God became incarnate, and was made man, Jesus Christ, the Son of God and the Son of Man, full of grace and truth.

(4) Through His life and teaching, His call to repentance, His proclamation of the coming of the Kingdom of God and of judgment, His suffering and death, His resurrection and exaltation to the right hand of the Father, and by the mission of the Holy Spirit, He has brought to us forgiveness of sins, and has revealed the fullness of the living God and His boundless love toward us. By the appeal of that love, shown in its completeness on the Cross, He summons us to the new life of faith, self sacrifice, and devotion to His service and the service of men.

(5) Jesus Christ, as the crucified and living One, as

Saviour and Lord, is also the center of the world-wide Gospel of the Apostles and the Church. Because He Himself is the Gospel, the Gospel is the message of the Church to the world. It is more than a philosophical theory; more than a theological system; more than a program for material betterment. The Gospel is rather the gift of a new world from God to this old world of sin and death; still more, it is the victory over sin and death, the revelation of eternal life in Him who has knit together the whole family in heaven and on earth in the communion of saints, united in the fellowship of service, of prayer, and of praise.

(6) The Gospel is the prophetic call to sinful man to turn to God, the joyful tidings of justification and of sanctification to those who believe in Christ. It is the comfort of those who suffer; to those who are bound it is the assurance of the glorious liberty of the sons of God. The Gospel brings peace and joy to the heart, and produces in men self-denial, readiness for brotherly service, and compassionate love. It offers the supreme goal for the aspirations of youth, strength to the toiler, rest to the weary, and the crown of life to the martyr.

(7) The Gospel is the sure source of power for social regeneration. It proclaims the only way by which humanity can escape from those class and race hatreds which devastate society at present, into the enjoyment of national well-being and international friendship and peace. It is also a gracious invitation to the non-Christian world, East and West, to enter into the joy of the living Lord.

(8) Sympathizing with the anguish of our generation, with its longing for intellectual sincerity, social justice, and spiritual inspiration, the Church in the eternal Gospel meets the needs and fulfills the God-given aspirations of the modern world. Consequently, as in the past, so also in the present, the Gospel is the only way of salvation. Thus, through His Church, the living Christ still says to men, "Come unto me! He that followeth me shall not walk in darkness, but shall have the light of life."

Reports were also made and accepted on "The Nature of The Church," on "The Gospel of the Church of Christ," on "The Ministry," and on "The Sacraments." These reports were not adopted, however, but were received for presentation to the various churches represented, in accordance with the provision of the preamble that no action should be taken by the Conference without a unanimous vote. In addition, the Orthodox, the Lutheran, the Reformed Churches of Switzerland, France, Holland, and Belgium, and the Friends, drew up statements defining their own positions, which helped to clarify the issues, and which were to serve as a basis of mutual understanding. The women members of the Conference presented a report devoted to the part which women should hold in the councils and in the work of the church in the future. The Conference also recognized the duty of Christians to unite for moral service to the world.

Committees were appointed to consider such questions as "The Relation of the Existing Churches to the Unity of Christendom," the attitude of the churches toward the Sacraments, and the problem of agreeing on some form of joint or simultaneous communion—until such time as full inter-communion should be realized—as a means of effecting unity of the Church in worship.

Among those who were active in the meeting were: Bishop Charles Gore, Church of England, who was instrumental in calling the meeting and arranging its programme; Dr. Alfred Ernest Garvie, Congregationalist, and former president of the National Free Church Council, England, who was in large measure responsible for the success of the Conference; Bishop Francis J. McConnell, Methodist Episcopal Church, Pittsburgh, Pa.; Professor Adolph Deissmann, University of Berlin; Bishop Charles H. Brent, of Western New York; Pastor Wilfred Monod, Professor of Protestant Theology, University of

Paris; Dr. S. Parkes Cadman, president of the Federal Council of Churches of Christ, Brooklyn, N. Y.; The Most Reverend Nathan Söderblom, Archbishop of Upsala, Sweden; Bishop Nicolai Velimirovic, Bishop of Ochrida, Serbia; Metropolitan Chrysostom, Archbishop of Greece, Athens; the Right Reverend Dr. Arthur C. Headlam, Bishop of Gloucester, England; Bishop James Cannon, Methodist Episcopal Church, South; the Most Reverend Metropolitan Germanos, Eastern Orthodox Church, London; Bishop W. T. Manning, Protestant Episcopal Church, New York; Bishop Edwin James Palmer, Bishop of Bombay; and Dr. Peter Ainslie, Baltimore. Bishop Brent was chairman and Dr. Garvie vice chairman of the Conference.

WORLD COURT. Almost at the same time that the U. S. Senate, on February 9, defeated by a vote of 59 to 30 a proposal to rescind the United States reservations to the World Court (see *YEAR BOOK* for 1926) the news arrived that Great Britain had informed the League of Nations in substance that it could not accept them and particularly the fifth, on advisory opinions. This was in accord with the document published at Geneva in 1926, in which all the nations there represented expressed their reluctance to accept the American reservations. Since in his speech at Kansas City on Nov. 11, 1926, President Coolidge had declared that he would not submit the matter to the Senate again unless all the reservations were accepted without change, it was commonly asserted on all sides that the issue was dead in the United States. It was predicted that the pacifist groups would begin work for the abolition of the reservation. There was a widespread opinion that seemed solidly against any such action, on the ground that the World Court is not an independent judicial tribunal but an adjunct of the League of Nations.

It was quite true there was a widespread feeling in the United States that foreign alliances might prove to be entangling, and therefore dangerous, but there seemed to be little doubt but that there was a substantial body of public opinion, that was constantly growing, that the sane and reasonable method of settling disputes was through the arbitration of reason as embodied in a court procedure rather than by the arbitrament of arms.

In his address as president of the American Society of International Law, in April, 1927, Charles E. Hughes pointed out that the difficulties that have arisen with respect to the adherence of the United States to the protocol of signatures of the statute of the Permanent Court are concerned chiefly, if not exclusively, with the giving of advisory opinions in relation to disputes and questions in which the United States has or claims an interest. He stated:

Regrettable as it is that an apparent deadlock has been reached, there is no gain in blinking the facts. The Senate adopted a reservation providing explicitly that the Court shall not entertain, without the consent of the United States, any request for an advisory opinion touching such disputes or questions. That reservation has not been accepted, and a counter-proposal has been made by a Conference of Signatories of the Protocol. That Conference deemed the opinion of the Permanent Court in the *Eastern Carrelia* case, to the effect that the Court would not deal with a dispute between a Member of the League and a State not belonging to the League, even to the extent of giving an advisory opinion, without the consent of the latter State, as apparently meeting the desire of the United States, so far as

disputes to which the United States is a party are concerned. As to disputes to which the United States is not a party but in which it claims an interest, or questions, other than disputes, in which the United States claims an interest, the Conference proposed that the Court should attribute to the objection of the United States "the same force and effect as attaches to a vote against asking for the opinion, given by a Member of the League of Nations either in the Assembly or in the Council."

In connection with this proposal the Conference made a frank comment that the Senate's reservation appeared to rest "upon the presumption that the adoption of a request for an advisory opinion by the Council or Assembly requires an unanimous vote." It was pointed out that no such presumption had thus far been established and it was "therefore impossible to say with certainty whether in some cases, or possibly in all cases, a decision by a majority is not sufficient"; so that the opportunity of the United States to raise objection on a footing of equality with a member of the League in the Council and Assembly, respectively, would not assure to the United States, as required by the Senate's reservation, a right to prevent the entertaining by the Court of a request for an advisory opinion touching such disputes or questions in which the United States claims an interest.

The question having thus been raised, the response of the Conference of Signatories that unanimity may not be necessary in requesting advisory opinions has created a new situation, as adherence of the United States on these terms would require an explicit approval on the part of the Senate of an understanding that advisory opinions might be requested over the objection of the United States touching such disputes and questions in which the United States claims an interest.

As Mr. Hughes pointed out, the core of the difficulty had been recently stated succinctly and candidly by Senhor Fernandez, formerly Brazilian Ambassador to Belgium, who was a member of the advisory committee of jurists which drafted the statute of the Permanent Court.

Senhor Fernandez said:

It would be useless to deny, however, that certain members of the League of Nations have sufficient prestige to keep at least the Council, if not the Assembly, from taking up and deciding a question, if or when they doubt the expediency of doing so. Even if such a nation were in a minority at first, it is very likely that the other nations would yield to the arguments they bring forth, or would prefer to postpone a decision. As a matter of fact, this is the way things are done, and it would be disastrous if they were done differently; the Council is strong only when its members can reconcile their different points of view, and its usefulness consists precisely in facilitating such agreement through the personal contacts and the continued conversations that are possible only at Geneva. This being the case, the situation proposed to the United States, as affording a theoretical equality, would be as follows: the United States government, from a distance, would oppose its futile vetoes on proposals agreed on at Geneva; while certain other nations, on the scene, would retain their means of sidetracking the proposals that seemed troublesome to them.

The discussion of the Fernandez address was widespread both in America and abroad, the discussion being stimulated by the American Foundation, whose main purpose was to secure adherence to the World Court.

President Coolidge, however, took the ground that the hands of the United States were tied, and that he could do nothing. He accepted the answers received from member nations of the

World Court as being of such a nature as to give no encouragement for a further attempt on the part of the United States to reopen negotiations.

So far as the President had been able to learn, he had let it be known, there was no present willingness in the United States Senate to accept any modifications. He had received assurance from Senators who had been strong advocates of American participation in the World Court that, following the refusal on the part of member nations to accept the United States upon the terms laid down by the Senate, they could not hope to bring about a change in the position taken by the Senate.

Thus the matter stood at the end of 1927, although the American Foundation was determined to continue its campaign to make clear to as wide a public as possible the exact present status of the Court question and to analyze clearly the obstacles that were preventing the adherence of the United States to the Court.

In 1927 it published a draft treaty for the pacific settlement of international disputes through conciliation, arbitration or judicial settlement (See ARBITRATION). The purpose in publishing this treaty was twofold: First, the desire to show that the power of the United States to continue its traditional contribution to the causes of arbitration and pacific settlement is dependent upon consummating American adherence to the Permanent Court of International Justice, which increasingly forms an indispensable factor in general treaties for pacific settlement; and, second, a desire to show what is practically involved in the popular aspiration toward "outlawing war."

According to Prof. Manley O. Hudson, the sixth year of the Court had been both busy and fruitful, the judges having been kept continuously at The Hague from June 15 to December 16th. Four orders, four judgments and one advisory opinion were handed down. This brought the total up to eleven judgments and fourteen advisory opinions.

The court issued an order on the request of Belgium indicating provisionally that Belgian nationals in China were entitled to the rights secured by the Treaty of 1865; later they will decide whether China is entitled to denounce that treaty unilaterally.

Germany filed a proceeding with respect to reparations claimed to be due by Poland to two German companies on account of the attitude adopted towards these firms when Poland took possession of a nitrate factory in 1922. Various pleadings were filed, and Poland's plea to the jurisdiction was overruled and the president judge instructed to fix times for the counter case, reply and rejoinder.

A question having arisen as to the interpretation of Judgments Nos. 7 and 8, dealing with the seizure of this factory, the court decided that in Judgment No. 7 the court did not reserve to the Polish government the right of asking by process of law, even after the rendering of that judgment and with application to that particular case, for a declaration that the entry, in pursuance of the agreement of Dec. 24, 1919, of the name of the Oberschlesische Stickstoffwerke A. G. in the land registers as owners of the Chorzow factory is null and void; but that, by the aforesaid judgment, the court meant to recognize, with binding effect between

the parties concerned and in respect of that particular case, amongst other things, the right of ownership of the Oberschlesische Stickstoffwerke A. G. in the Chorzow factory under municipal law. This judgment was reached by a vote of 7 to 3.

On September 7, a judgment was handed down in the *Lotus* case which involved some interesting points of international law. This case was one between France and Turkey arising out of a collision which occurred in 1926 between the French ship *Lotus* and the Turkish vessel *Bos-Kourt*. After the collision the *Lotus* made its way to Constantinople, where the Turkish authorities tried and imprisoned the French officer of the watch. France, claiming the imprisonment to be illegal, brought suit against Turkey, asking for damages. The main point in the case was whether the Turkish law conferring jurisdiction upon Turkish courts over offenses against Turkish nationals committed upon the high seas was valid. The court being evenly divided, the President cast the deciding vote in favor of Turkey, so that the case stands for the rule that the laws of a nation may apply beyond its limits unless there is a rule of international law to oppose it.

In the matter of the Mavromattis Jerusalem Concession, in which Greece and the British Empire were involved, and which had already been twice before the court, by a vote of 7 to 4 it was decided to uphold the preliminary objection denying the court's jurisdiction. This was the first time the court had refused to take jurisdiction.

On Sept. 18, 1926, representatives of France, Great Britain, Italy and Rumania signed an agreement at Geneva, requesting the Council of the League of Nations to ask the court for an advisory opinion on three questions, as follows:

1. Under the law at present in force, has the European Commission of the Danube the same powers on the maritime sector of the Danube from Galatz to Braila as on the sector below Galatz? If it has not the same powers, does it possess powers of any kind? If so, what are these powers? How far upstream do they extend?

2. Should the European Commission of the Danube possess either the same powers on the Galatz-Braila sector as on the sector below Galatz, or certain powers, do those powers extend over one or more zones, territorially defined and corresponding to all or part of the navigable channel to the exclusion of other zones territorially defined, and corresponding to harbor zones subject to the exclusive competence of the Rumanian authorities? If so, according to what criteria shall the line of demarcation be fixed as between territorial zones placed under the competence of the Rumanian authorities? If the contrary is the case, on what non-territorial basis is the exact dividing line between the respective competence of the European Commission of the Danube and of the Rumanian authorities to be fixed?

3. Should the reply given to (1) be to the effect that the European Commission either has no powers in the Galatz-Braila sector, or has not in that sector the same powers as in the sector below Galatz, at what exact point shall the line of demarcation between the two régimes be fixed?

It was decided:

- (1) a. That under the law at present in force

the European Commission of the Danube has the same powers on the maritime sector of the Danube from Galatz to Braila as on the sector below Galatz;

b. That these powers extend up to the port of Braila, this port being included.

(2) a. That the powers of the European Commission of the Danube extend over the whole of the maritime Danube, and are not excluded from any zones territorially defined and corresponding to harbor zones:

b. That the dividing line between the respective competences of the European Commission of the Danube and of the Rumanian authorities in the ports of Galatz and Braila is to be fixed according to the criteria:

(I) Of navigation, in the sense of the movement of ships as part of their voyage, the European Commission of the Danube being also competent in regard to navigation in ports, whether the ships are passing through or coming to or leaving their moorings, as far as navigation so understood is concerned;

(II) And of the obligation to ensure freedom of navigation and equal treatment of all flags, the European Commission of the Danube, being competent, also as concerns the ports, to exercise the supervision inherent in this obligation;

(3) That it is not necessary to give an answer to the question put under No. 3.

On September 7, the court announced the adoption of an amendment of Article 71 of the Rules of Court, relating to advisory procedure. This article originally read:

Advisory opinions shall be given after deliberation by the full court.

The opinions of dissenting judges may, at their request, be attached to the opinion of the court.

On July 31, 1926, this text was amended to read:

Advisory opinions shall be given after deliberation by the full court. They shall mention the number of the judges constituting the majority.

Dissenting judges may, if they so desire, attach to the opinion of the court either an exposition of their individual opinion or a statement of their dissent.

On September 7, a new paragraph was added, after the first paragraph, as follows:

On a question relating to an existing dispute between two or more states or members of the League of Nations, Article 31 of the statute shall apply. In case of doubt the court shall decide.

This represents a further step in the assimilation of the procedure with reference to advisory opinions to that in contested cases. It means that if the opinion sought relates to a dispute between two or more states, each of these states, if it has no national among the judges, may appoint one of its nationals to sit as judge *ad hoc*, just as it might do if it were party to a case submitted to the court for judgment.

WORLD CROPS. See AGRICULTURE

WORLD FEDERATION OF EDUCATIONAL ASSOCIATIONS. See EDUCATION.

WORLD LEAGUE AGAINST ALCOHOLISM. An organization originated in a conference of the Anti-Saloon League of America at Columbus, Ohio, November, 1916, and formally launched in a joint conference of the Canadian Temperance Alliance and the Anti-Saloon League. It met and adopted a constitution in June,

1919, at Washington. The charter members included representatives of sixteen national temperance organizations from twelve countries. The object of the World League is "to attain, by the means of education and legislation, the total suppression throughout the world of alcoholism, which is the poisoning of the body, germ-plasm, mind, conduct and society produced by the consumption of alcoholic beverages."

The World League is an educational movement, which under its constitution "pledges itself to avoid affiliation with any political party as such and to maintain an attitude of strict neutrality on all questions of public policy not directly and immediately concerned with the traffic in alcoholic beverages."

The League, which had assembled in its first convention at Toronto, Canada, November, 1922, with 1111 delegates representing 66 countries, met at Winona Lake, Indiana, August, 1927, with 1148 delegates from 58 countries. The official League membership in 1927 comprised 56 national temperance organizations from 33 of the leading countries of the world. The work of the League was carried on by the executive, legal, publicity and service departments, with offices at Westerville, Ohio; the research department was located in New York City; the Scientific Temperance Federation, which on behalf of the World League carries on studies of the scientific aspects of the alcohol problem and issues reports thereon, at Boston, Mass; the Intercollegiate Prohibition Association, operating as the students' department of the League, had its headquarters in the Bliss Building, Washington, D. C. Branch offices were maintained in London, England; Lausanne, Switzerland; Oslo, Norway; and Toronto, Canada. The League had four presidents: Miss Anna A. Gordon, Evanston, Ill.; Dr. Robert Herod, Lausanne, Switzerland; the Rt. Hon. Leif Jones, York, England; Dr. Howard H. Russell, Westerville, Ohio. There were twenty vice presidents, representing as many different countries. Dr. Ernest H. Cherrington was general secretary.

WRECKS. See SAFETY AT SEA.

WRESTLING. Professional wrestling continued at a low ebb during 1927, both Ed ("Strangler") Lewis and Joe Stecher claiming the world's championship. A match between these two was arranged for Feb. 20, 1928, at St. Louis, and if it took place would mark their first meeting on the mat in seven years.

The annual tournament of the Amateur Athletic Union was held at Ames, Iowa, the winners of the final bouts being: 112 pounds, Leroy Pfeffer, University of Iowa; 118 pounds, Lawrence Lake, Oklahoma Agricultural College; 126 pounds, Arthur Holding, Iowa State College; 135 pounds, Allie Morrison, University of Illinois; 147 pounds, Ralph Prunty, Ames, Iowa; 160 pounds, Findley Collins, Oklahoma Agricultural College; 175 pounds, George Rule, Oklahoma Agricultural College; heavyweight, Roger Flanders, Stillwater, Okla.

Yale and Lehigh tied for first place in the intercollegiate championship, each scoring 14 points. Syracuse and Cornell also were deadlocked with 12 points each. Other colleges to score points were; Pennsylvania 8; Columbia 5; Princeton and Penn State 3 each. The individual winners were: 115 pounds, Charles Okum, Syracuse; 125 pounds, James Reed, Lehigh; 135

pounds, George McDonald, Pennsylvania; 145 pounds, John Geier, Cornell; 168 pounds, Burr Miller, Yale; 175 pounds, M. Sesit, Columbia; heavyweight, Jacob Patterson, Syracuse.

WUERTEMBERG, vurt'tëm-bêrk. A constituent state of the German republic since November 1918; formerly a kingdom of the German Empire. Area, 7530 square miles; population, according to the census of 1925, 2,526,171. Chief city, Stuttgart, with a population in 1925 of 341,461. The movement of population in 1924 was: Births, 50,792; deaths, 33,694; marriages, 15,637. The chief occupation is agriculture, about 64 per cent of the total area being under cultivation. The chief crops with their acreage and production in 1925 were: Wheat, 207,775 acres, 1222 tons; rye, 70,522 acres, 347 tons; barley, 245,022 acres, 1328 tons; oats, 258,262 acres 1088 tons; potatoes, 204,072 acres, 9187 tons; hay, 1,321,018 acres, 27,737 tons; vines, 26,478 acres, 3,705,240 gallons of wine. The estimated revenue for the year ending Mar. 31, 1926, was 213,672,990 marks; expenditure, 215,535,182 marks. Supreme power is vested in the Landtag, composed of 80 members elected for four years by universal suffrage. This body appoints the state ministry, whose president is styled State President. State president and minister of education in 1927, Wilhelm Bazille.

WYOMING. POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 194,402. Estimates made as of July 1, 1927, indicated a population of 241,000. The largest city was Casper, which increased from 11,447 in 1920 to 23,288 in 1925. The capital is Cheyenne.

AGRICULTURE. The following table presents the acreage, production and value of the principal crops in 1926 and 1927:

Crop	Year	Acreage	Prod. bu.	Value
Hay	1927	1,094,000	1,721,000*	\$15,489,000
	1926	1,054,000	1,698,000*	14,433,000
Corn	1927	176,000	3,696,000	2,785,000
	1926	176,000	3,520,000	2,534,000
Wheat, winter	1927	54,000	972,000	938,000
	1926	48,000	864,000	924,000
Wheat, spring	1927	172,000	3,440,000	8,234,000
	1926	150,000	2,850,000	3,050,000
Oats	1927	120,000	4,560,000	1,915,000
	1926	120,000	4,200,000	1,890,000
Potatoes	1927	17,000	2,414,000	1,690,000
	1926	13,000	1,456,000	1,820,000
Barley	1927	59,000	2,124,000	1,296,000
	1926	42,000	1,886,000	859,000

* tons.

MINERAL PRODUCTION. The production of petroleum, the leading mineral commodity of the state, was at a somewhat lower rate in 1926, being 24,558,000 barrels, as against 29,173,000 barrels in 1925; in value, \$49,300,000 in 1926 (estimated) and in 1925, \$51,467,000. The coal produced in 1926 totaled 6,968,000 short tons, and in 1925, 6,553,232 tons. Coal produced in 1925 was valued at \$18,275,000. Natural gas production was 45,539,000 M feet in 1925; in 1924, 46,036,000 M feet. In value it was \$4,149,000 in 1925 and in 1924, \$4,081,000. Gasoline was produced from natural gas to the total of 40,200,000 gallons in 1926 and of 32,777,000 gallons in 1925; in value, \$4,100,000 in 1926 (estimated) and \$3,227,000 in 1925. The total value of the mineral production of the state, duplications eliminated, in 1925 was \$78,754,916; in 1924, \$75,494,166.

FINANCE. As reported by the U. S. Department of Commerce, payments for maintenance and operation of the general departments of the State government in the fiscal year ending Sept. 30, 1926, were \$4,198,416; their rate per capita was \$17.94. They included \$1,341,430 apportioned for education. Totals not included in the above, of \$183,740 in interest and of \$2,279,229 for permanent improvement outlays, brought the aggregate of State expenditure to \$6,661,385. Of this, \$2,042,550 was for highways; \$732,266 being for maintenance and \$1,910,284 for construction.

Revenue receipts were \$8,550,417, or per capita, \$36.54. Of their total, property and special taxes yielded 22.1 per cent, attaining a per capita rate of \$8.09. Earnings of departments and compensation paid the state for officials' services furnished 4.9 per cent of revenue; 14.6 per cent was derived from sale of licenses, chiefly on incorporated companies and on motor vehicles, and from a gasoline sales tax.

Net State indebtedness on Sept. 30, 1926, was \$1,006,878, or \$8.15 per capita. Property subject to ad valorem taxation bore a valuation of \$457,760,160. State taxes levied thereon were \$1,626,467, or \$6.95 per capita.

TRANSPORTATION. The total number of miles of railroad in the State on Jan. 1, 1927, was 1,994.44. No construction was reported in 1927.

EDUCATION. Power to impose school levies was transferred by enactment from the county schools commissioners to the school district boards. A committee studying the teachers' retirement problem continued its task. The high school enrollment, according to report in the *Journal of the National Education Association*, rose above 20 per cent of the entire enrollment, elementary and high. According to figures covering the scholastic year 1926-27, the school population was reckoned at 62,534. There were enrolled in the public schools of the state 49,764 pupils, of whom 39,030 were in the elementary schools and 10,128 in high schools. The year's total of expenditure for public school education in the state was \$6,249,979.

CHARITIES AND CORRECTIONS. The State Board of Charities and Reform and State Board of Pardons formed together in 1927 the central state organization dealing with welfare activities. This organization reported the numbers of inmates in the institutions of the State on September 1 as follows: Wyoming State Penitentiary, 274; Wyoming State Hospital, 391; Wyoming General Hospital, 24; Wyoming State Training School, 190; Soldiers' and Sailors' Home, 26; Wyoming Industrial Institute, 70; State Home for Dependent Children, 28; Girls' Industrial Institute, 32; Wyoming Tuberculosis Sanatorium, 12. The State also maintained 4 women prisoners in the Colorado Penitentiary and dependents in schools for the deaf and blind in the States of Colorado, Nebraska, Montana, and Utah.

LEGISLATION. The regular biennial session of the legislature convened January 11. In accordance with recommendations in the message of Governor Emerson, a State old-age pension measure was passed: this however was vetoed. Coupled with the pension, the measure provided the levy of a State tax of 3 cents a package on cigarettes. According to the Governor, this provision was unconstitutional in that it failed to scale the tax in accordance with the

size and value of the package. A bill to permit persons to bring divorce proceedings after a residence of but four months in the State was passed by the lower house. The State savings loan act was amended.

OFFICERS. Governor, Frank C. Emerson; Secretary of State, A. M. Clark; Treasurer, W. H. Edelman; Auditor, Vincent Carter; Superintendent of Public Instruction, Katherine A. Morton; Attorney General, W. O. Wilson.

JUDICIARY. Supreme Court: Chief Justice, Fred H. Blume; Associate Justices, C. N. Potter (died December 21) and Ralph Kimball.

WYOMING, UNIVERSITY OF. A State institution of higher education at Laramie; founded in 1886. It consists of a college of liberal arts, a college of agriculture, a college of engineering, a college of education, and a law school. The enrollment for the autumn of 1927 was 1073, classified as follows: Liberal arts, 642; agriculture and home economics, 123; engineering, 136; education, 249; law, 24. The registration for the two summer school sessions of six weeks each and the supplementary six weeks' session at Sun Dance totaled 1294. The teaching faculty numbered 111. The income for 1926-27 was \$1,226,085. The library contained 67,000 volumes. President, Arthur Griswold Crane, Ph.D.

YACHTING. For the second year in succession, international yacht competition was restricted to six-meter matches, the Seawanhaka Cup and the Scandinavian Gold Cup being the trophies at stake and both having been captured in foreign waters by the American yacht *Lanai*. The first trophy was won on the Clyde, England, in 1925 and the second at Oslo, Norway, in 1926. The Seawanhaka Cup contest in 1927 was a two-boat event, the American defender *Clytie* being defeated by the Norwegian yacht *Norweg*. The conditions governing the Scandinavian Gold Cup competition provide that the trophy shall go to the yacht winning the first three races. After a long drawn out struggle *May Be*, a Swedish entry, emerged the victor, the American defender, *Lea*, being hopelessly outclassed. Eight nations took part in this series: United States, Norway, Sweden, Denmark, Finland, England, Holland, and Italy. The Star Class race held on Narragansett Bay afforded another interesting international test, the outcome being a tie between the *Tempe III*, representing Newport Harbor, California, the *Colleen* from the Central Long Island Sound fleet and the *Mackerel* of Chesapeake Bay, each having 71 points. *Tempe* won the sail-off from the *Colleen*.

The annual cruise of the New York Yacht Club was favored with excellent weather except in the King's Cup event which turned into a drifting match won by Harry L. Maxwell's sloop *Barbara*. The racing for the Commodore's Cups had to be abandoned because of the poor weather conditions. In the earlier racing of the cruise the *Vanitie* easily captured the schooner cup while Harold Vanderbilt's *Prestige* took the sloop prize. The Larchmont Race Week fleet numbered 188, breaking all records, but miserable weather marred this annual yachting feature.

The outstanding event in motor boating during 1927 was the annual Gold Cup competition which was held at Greenwich, Conn., under the auspices of the Indian Harbor Yacht Club. There were more than a dozen boats entered, including the defending craft, *Greenwich Folly*, owned and driven by George H. Townsend of the Indian

Harbor Club. One by one the several rivals of the *Greenwich Folly* dropped out by reason of accidents, until only the defender and *Miss Columbia*, driven by Charles F. Chapman, were left in the race. *Miss Columbia* was finally compelled to stop to do some rescue work, and *Greenwich Folly* won.

Women drivers turned in some notable performances during the year, Miss Delphine Dodge Cromwell winning several prizes with her *Miss Syndicate*. Included among her trophies were the President's Cup and the Dodge Memorial Trophy. Miss Helen Hentschell showed skill as a driver of outboards by covering 27.48 miles an hour at Albany, a record for Class B boats. J. H. Rand's *Spitfire V* set a world's record for 151-hydroplanes of 63.09 miles an hour.

YALE UNIVERSITY. A non-sectarian institution of higher education at New Haven, Conn.; founded in 1701. The university consists of ten schools, as follows: Undergraduate: Yale College (1701); Sheffield Scientific School (1847); graduate and professional: graduate school (1847); school of medicine (1813); divinity school (1822); school of law (1824); school of the fine arts (1866); school of music (1894); school of forestry (1900); school of nursing (1923). Since 1920 the undergraduate freshman year has been under the jurisdiction of a separate dean and faculty. The enrollment for the autumn of 1927 was 5459, including 450 who were not candidates for degrees. Of those working for degrees 635 were in the graduate school; 1608 in Yale College; 698 in the Sheffield Scientific School; 878 in the freshman year; 212 in the school of medicine; 219 in the divinity school; 367 in the school of law; 312 in the school of the fine arts; 100 in the school of music; 44 in the school of forestry; 49 in the school of nursing; and 37 research fellows working on the various foundations. The registration for the summer session of the school of law was 112. The faculty numbered 1095, consisting of 205 of professional rank, 55 associate professors, 100 assistant professors, 224 instructors, and 434 assistants. The library, including the departmental libraries, contained 1,838,063 volumes and pamphlets. The total endowment was \$49,144,150.96, and the income for the year was \$5,658,071.66. As a result of the decision to increase the endowment by \$20,000,000, in order to carry on successfully the work done in various fields, Yale men the world over were enlisted during the past year in raising the sum. At commencement, 1927, it was reported that \$17,200,000 had been received in gifts or pledges, and the goal was reached by the end of the year.

In 1926 the school of medicine instituted changes compatible with graduate education and designed to increase the student's latitude of choice and his opportunity for study in selected fields. Ordinarily, the first two years were to be devoted to study in the branches of science considered prerequisite for the study of clinical medicine, after which the student will take an examination for admission to the course in clinical medicine, which comprises major work in clinical medicine or in one of the basic subjects in the biological and medical sciences.

In 1927 the School of Law adopted rules requiring a college degree of every applicant for entrance except from Yale undergraduates electing the combined course. Applicants from other law schools are not to be admitted unless they

have an average of B in their law school work. Only one hundred college graduates who have not previously studied law are to be admitted in any one year. The admission is on a basis of a personal interview, a classification test, and inspection of the applicant's college record. Plans were made for beginning the erection of the Sterling law buildings in 1928, under provisions made by the trustees of the estate of John W. Sterling of New York City.

In 1927 the Trustees of the estate of John W. Sterling gave \$1,000,000 to establish Sterling chairs in biology, palaeontology, law, and English history. The buildings erected at East Lyme, Conn., for the summer engineering courses of the Sheffield Scientific School were completed during the year. The Alumni War Memorial, designed by Thomas Hastings, and completed in 1927, takes the form of a colonnade on the south side of University Hall; above is an entablature with the names of important engagements in the Great War; in front is a terrace with a cenotaph. William L. Harkness Hall, containing lecture and recitation rooms and offices for members of the faculty, was completed in October, 1927. A portion of Charles W. Bingham Hall, a dormitory, was completed for occupancy in the autumn of 1927, and the Art Museum was under construction. The athletic facilities were augmented by gifts of funds for the Phipps Polo Field and for the Charles E. Coxé Memorial (Yale Field Gymnasium). President, James Rowland Angell, Ph.D., Litt.D., LL.D.

YAP. A Japanese island of the Caroline group in the Pacific, centre of administration for the western Carolines; an important wireless and cable station. Population, 8439.

YAWS. Since the acquisition of the Philippine Islands by the United States this chronic contagious disease, which bears so close a resemblance to syphilis and is so common as to figure under social medicine, took on renewed interest to the people of the United States, although until quite recently no official notice had been taken of it. In the Dutch East Indies beginning in 1919 an attempt was made to stamp out the disease by a systematic campaign which involved the wholesale injection of neosalvarsamine (neosalvarsan); and in the next five years over a million injections of this drug were made, with such success that yaws was regarded as practically eradicated. In 1924 the same effort was made by the Philippine Health Service. In five of the provinces the incidence of the disease was over 95 per 1000 population and 25 clinics were established to treat the 21,000 known victims with the neosalvarsamine injections. So startling was the benefit that the patients met the Health Service more than half way. A loathsome, incapacitating and contagious disease was rapidly being eradicated, yaws fortunately being a relatively easy disease to cure permanently.

YELLOW FEVER. This disease in 1927 was dormant in the western hemisphere, but according to the monthly report of the Section of Hygiene of the League of Nations, dated July 15, an epidemic of it broke out in October, 1926, on the west coast of Africa during the transportation of 200 Syrians to Senegal. The pestilence was extinguished in January after 29 deaths had occurred, but reappeared in May in Senegal, Togoland and Dahomey and the Gold Coast, in scattered figures. The daily press announced on September 3 the death from yellow fever of

Prof. Adrian Stokes (q.v.) at Lagos, West Africa. He was functioning as a member of the Rockefeller Yellow Fever Commission. He had been studying infected mosquitoes and was believed to have been bitten by one of them. As he was on the point of returning to London it was believed that the disease had been arrested for the time. In a letter written shortly before his death he stated that years might be required to extirpate the pestilence with finality, and it was evident that this could not come to pass until the "reservoir" which harbors the germ of the disease during its dormant periods was discovered and placed under control. Eighty-five per cent of the mosquitoes examined at Rufisque, Senegal, were examples of *Stegomyia*, the form which is known to propagate the disease.

YEMEN, IMAMATE OF. See ARABIA.

YOUNG, SIR FREDERIC WILLIAM. British consulting engineer and salvage expert, died at London, December 20. Born in 1858, he early followed the sea traditions of his family and for 30 years was chief surveyor and salvage officer of the Liverpool Salvage Association. As head of the Salvage Section of the British fleet during the World War he devised the boom defenses at the mouth of the Thames, blocked Portland harbor by sinking the battleship *Hood* bottom up, and helped to fit out the expedition which destroyed the *Königsberg*. Other exploits included the raising of the British *K-13* sunk during the war in a trial test off the coast of Scotland, which led to the rescue of the crew of 43 after 56 hours' imprisonment; the refloating of the battleships *Conqueror* and *Britannia*; and the reconditioning of the *Lion* after the battle of Heligoland. He was said to have been the first to raise a sunken German U-boat. It was estimated that he was instrumental in lifting vessels and cargoes to the value of £50,000,000 during the War. He was made a Knight Commander, Order of the British Empire, in 1920 and received decorations from numerous foreign governments in recognition of his services during the War. At the time of his death he was managing director of Sir Frederic W. Young & Co., Ltd., salvage experts and consulting engineers.

YOUNG MEN'S CHRISTIAN ASSOCIATION. An educational, social, physical and spiritual movement for men and boys found in every civilized nation of the world. This organization had its birth in London in 1844, and spread to the United States in 1851. The records, as of June 1, 1927, showed 1,561,365 members throughout the world, 61 per cent of whom were in North America; 7241 employed officers, 73 per cent being in America; and \$241,450,800 in net Association property, of which 85 per cent was in North America. In 1927 the movement in North America involved 1081 local organizations recognized by the convention, with 88,957 directors and voluntary leaders, 5401 paid officers, and a paid-up membership of 989,534. Of these, 260,612 were boys 12 to 17 years of age. Five per cent of this body of workers and members were found in the Canadian associations and the remainder in the associations of the United States. Statistics as of June 1, 1927, showed \$205,183,600 of net property and funds paid in. Of this amount, \$20,344,200 was in endowment funds. The operating expenditures for 1927 were \$57,125,300, more than \$1,100,000 per

week. These expenditures were provided for by the members, plus contributions from friends amounting to \$15,918,400.

In its activities, the Young Men's Christian Association movement involves several hundred distinct features or lines of service. In its physical training and service it enrolled 587,041 men and boys in the year ending April 30, 1927. In educational features, including lectures, discussions, evening schools, and regular college courses, both day and evening classes, about 300,000 men and boys were served. The number in regular courses of instruction covering from two to four years in length and of college grade was 83,504, a number equal to all of the male students in all of the colleges and universities of the United States having an enrollment of less than 3000 each. During the year 234,966 students were enrolled in the Bible courses, and there was a total attendance of 5,551,500 at the definitely religious meetings.

A few years after the work began in North America, it expanded its helpfulness to foreign lands, where there were, in 1927, 210 local and national secretaries at work in 32 different countries, supported with a budget of \$2,155,400 by the Associations of North America. This amount was included in the total annual expenditures mentioned above.

For the professional training of secretaries and paid officers there were three Association colleges in the United States: Springfield, Mass., with 467 students; Chicago, Ill., with 287; Nashville, Tenn., with 99. To facilitate the training and efficiency of workers who could not attend these colleges, there were nine summer schools, lasting from two to four weeks each. In 1927 these summer schools had an enrollment of 1413. In addition to hundreds of bulletins of various kinds, issued by the State and local Associations, there were the following international periodicals for the North American Associations: *Association Men*, monthly; *The Intercollegian*, monthly; *The Student World*, quarterly; *Physical Training*, monthly; *The Association Forum*, quarterly.

By the formation of the national councils of United States and Canada, Jan. 1, 1925, the international committee became only the holding organization for the two national councils and turned over to them the active supervision and promotion of the local and state activities. It also continued a very close relationship to the conduct of the foreign work which was supported by the Associations in both national councils. The headquarters and officers of these three organizations were as follows: The International Committee, 347 Madison Avenue, New York; James M. Speers, chairman, Dr. John R. Mott, general secretary; The National Council of the United States, 347 Madison Avenue, New York; D. W. Teachout, chairman, Dr. John R. Mott, general secretary; The National Council of Canada, 40 College St., Toronto, Ont., R. F. McWilliams, chairman, H. Balantyne, general secretary.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION. An organization and movement aiming to advance the physical, social, intellectual and spiritual interest of young women, to promote growth in Christian character and service, and to become a social force for the extension of the Kingdom of God. It holds a convention biennially, the 1926 convention having

taken place in Milwaukee and the 1928 convention being scheduled for Sacramento, California, in April. The executive committee of the organization is known as the National Board of the Young Women's Christian Associations and to it is entrusted the work of the organization during the interim of conventions. The Board interests itself in the city, town and county associations throughout the United States and its territories. Through its Foreign Division it works with other members of the World's Committee of the Young Women's Christian Associations, in carrying on Association work for women and girls in the Baltic States, the Near East, the Orient, South America, and the Philippine Islands. In the Oriental countries work is undertaken by the Association only upon invitation of the Mission Boards already working in the country. In 1927 work was being carried on under this department in 12 countries with a staff of 110 secretaries. The Young Women's Christian Associations in the United States in 1926 embraced from 900 to 1000 centres and branches in 254 cities. There were 40 rural Associations doing work in 720 communities, 147 Associations in towns, and 647 student Associations in schools and colleges. These local Associations had a membership of over 580,000 and real property amounting to over \$55,000,000. The gross budget of the local Associations for 1926 was estimated at approximately \$24,700,000, about 75 per cent of which was met by earnings from cafeterias, boarding homes, etc. The National Board budget for the year 1927 was \$2,248,451.96, of which \$382,544 was for promoting work in China, Japan, India, South America, Mexico, Philippine Islands, Russia, the Near East, and the Baltic States. The National Board had endowments yielding approximately \$131,000 annually, and income-producing and business features which in 1926 represented a gross income of about \$937,000. Contributions in 1926 totaled \$1,106,017.73.

The officers of the National Board for 1927 were: Mrs. Robert E. Speer, president; Mrs. John French, chairman of the executive committee; Mrs. John H. Finley, first vice president; Mrs. John D. Rockefeller, Jr., second vice president; Miss Katharine Lambert, secretary; Mrs. Samuel Murtland, treasurer; and Mrs. George W. Davison, assistant treasurer; Miss Mabel Cratty, general secretary. The National Board operates through the three regional offices in Chicago, Ill., Denver, Colo., and San Francisco, Cal., and its headquarters at 600 Lexington Avenue, New York City. The Y. W. C. A. National School for Professional Study is at 135 East 52nd Street, New York City.

YUKON, yook'kōn. A territory of the Dominion of Canada; bounded on the west by Alaska and stretching from British Columbia to the Arctic Ocean; constituted a separate political unit in 1898. Area, 207,076 square miles; population, 4157, according to the census of 1921; estimated in 1925 at 3500. The chief towns are Dawson, the capital, and White Horse. Mining is the principal occupation, and the chief minerals are gold, copper, silver, lead, and coal. The output of gold in the year 1925 was valued at \$988,465 and of silver at \$624,964. The revenue for 1925 was \$210,995, and the expenditure \$229,349. At the head of the government is a Gold Commissioner and a territorial council of

three elected members. Acting Gold Commissioner in 1927. Percy Reid

YUSEF, MULAI. Sultan of Morocco, died at Fez, November 17. He was born in Mequinez in 1882, the third son of Sultan Mulai el Hassan, who reigned until 1894. Each of his brothers who reigned before him had been forced to abdicate, and, following the establishment of a French protectorate over the empire during the reign of his predecessor, Mulai Yusef was proclaimed at Fez, Aug. 17, 1912. He remained loyal to the French throughout his reign and cooperated with General Lyautey, the French Resident-General. With French assistance he was able to institute reforms in education, in the administration of justice and in matters relating to religious land properties and land titles of aliens. On account of the loyalty of Mulai Yusef during the World War Governor Lyautey was able to reduce the French garrison in Morocco and to send to Europe a brigade of native volunteers. Mulai Yusef, whose visit to France in July and August, 1926, aroused great interest, was said to have been the first Moorish Sultan who was able to leave his dominions without fear of finding his throne occupied by a rival upon his return.

ZAGHLOUL, PASHA SAID. Egyptian prime minister, died at Cairo, August 23. He was born in 1851 at Biana, Egypt, where he lived the simple life of his parents before entering the great Mohammedan University of Al Azhar. He was still quite young when the first nationalist movement in Egypt, originally directed against the dynasty and ruling Turkish caste, became anti-European. He joined in the rebellion of Arabi Pasha in 1882, and after arrest and release began to practise as a barrister. Zaghoul's sudden appointment in 1906 to be minister of education took the public by surprise, but he soon won favorable opinions. In 1910 he became minister of justice and came into frequent personal contact with Khedive Abbas Hilmy. Contact meant conflict, and in 1912 when Zaghoul Pasha could not prove charges he had made against the khedive, he was compelled by Lord Kitchener to resign. From that date the Pasha nourished a grievance against the British agent and the country he represented. He was already marked as a leader of no mean capacity when the outbreak of the World War led to the deposition of the khedive and the proclamation of the British protectorate. An agitation for Egypt's complete independence caused the cabinet to resign on Mar. 1, 1919. The agitation grew fiercer and, on March 9, the British military authorities arrested Zaghoul Pasha and three of his principal associates and deported them to Malta. This led promptly to a popular outbreak all over the valley of the Nile and was only repressed by considerable British forces after some bloodshed and much destruction of property. Lord Allenby was hurriedly sent to Cairo as high commissioner and he secured the consent of the British government to the release of Zaghoul Pasha and his friends. The Pasha proceeded to Paris where he continued to direct the agitation for independence. In March, 1921, he was permitted to return to Egypt, and in December of that year after another period of turbulent demonstrations and rioting he was again arrested and deported to the Seychelles Islands. Lord Allenby, recognizing the danger of a prolonged deadlock, went to London and

secured the independence of Egypt as a sovereign State. After the promulgation of the new constitution in 1923, Zaghoul Pasha returned to Egypt for the elections. His party sweeping the country, he was elected prime minister in February, 1924. The assassination of the Sirdar, Sir Lee Stack, on Nov. 19, 1924, was a direct blow to his cause and led to his resignation. See EGYPT.

ZANZIBAR. A British protectorate, consisting of the island of the same name off the coast of Tanganyika in East Africa, together with the island of Pemba and several other small islands. Area, Zanzibar, 640 square miles; Pemba, 380 square miles; population, according to the census of 1924, 216,790 (Zanzibar, 129,140; Pemba, 87,650). The total number of children attending schools in 1924 was 3405. The prevailing religion is Mohammedanism. Zanzibar, with a population in 1924 of 38,700, is one of the chief ports of Africa. The chief industry is the production of cloves, the two islands of Zanzibar and Pemba yielding the greater part of the world's supply. The exports in 1925 were 219,217 cwt., and clove-stems, 41,440 cwt. The coconut industry ranks next in importance to cloves; the export of copra amounted to 350,274 cwt. in 1925. The value of imports in 1926 was 24,503,000 rupees; exports, 23,788,000 rupees; revenue in 1926, £487,168; expenditures in 1926, £690,000; tonnage entered and cleared in 1925, 1,033,784 net tons. The nominal head of the government is the Sultan, but the actual administration is in the hands of a British Resident, who is aided by an advisory council under the presidency of the Sultan. The Sultan's decrees are not binding unless countersigned by the British Resident. Sultan in 1927, Seyyid Khalifa bin Harub; British Resident, A. C. Hollis.

ZEISLER, FANNIE BLOOMFIELD. American pianist, died at Chicago, August 21. She was born at Bielitz, Silesia, July 16, 1863, the daughter of Solomon and Bertha Jaeger Bloomfield. In 1868 her parents settled in Chicago, where she began her musical studies under Bernhard Ziehn and Carl Wolfsohn. She made her first public appearance in 1876. From 1878 to 1883 she studied in Vienna under Leschetizky. She then returned to America, and for the next ten years toured the United States from coast to coast, giving numerous recitals and playing with all important orchestras. Her tour of Germany, in 1893-95, was a succession of triumphs and established her reputation as one of the greatest of contemporary female pianists, the peer of Menter, Essipov, and Carreño. She was equally great as an interpreter of the classic and the romantic masters. In 1885, she was married to Sigmund Zeisler, a prominent lawyer of Chicago.

ZINC. The world production of slab zinc in 1927 was estimated at about 1,450,000 tons, or an increase of approximately 5 per cent over 1926. Of this amount the United States produced approximately 42 per cent, or 612,000 tons, which was a decrease of some 4 per cent as compared with 1926. After the United States, Belgium came next as a producer, being followed in order by Upper Silesia and France. Europe apparently was mining zinc ores to meet its needs, and Great Britain was receiving supplies from Canada and Mexico, in both of which countries production was increasing.

The output of primary metallic zinc in the

United States from domestic ores in 1927 was about 575,000 tons and that from foreign ores about 13 000 tons, a total of 588,000 tons, as compared with 611,991 tons from domestic ores and 6431 tons from foreign ores, a total of 618 422 tons in 1926. In addition to the output of pri-

MINE PRODUCTION OF ZINC IN THE UNITED STATES IN 1926 AND 1927

[In terms of the recovered and recoverable metal content, in short tons. U. S. Bureau of Mines, 1927, estimated]

District	1926	1927
Eastern States	103,598	117,200
Central States:		
Tri-State district	423,800	341,900
Southeastern Missouri	1,092	3,800
Upper Mississippi Valley	29,377	33,100
Other	1,925	1,400
Total	456,194	380,200
Western States:		
Arizona	6,473	990
California	10,217	4,120
Colorado	82,500	37,440
Idaho	26,307	25,800
Montana	73,701	71,700
Nevada	5,409	8,630
New Mexico	12,053	26,800
Utah	47,590	47,900
Washington	522	710
Total	214,772	218,590
Grand total	774,564	715,990

mary zinc there was an output of about 45,000 tons of redistilled secondary zinc, as compared with 40,799 tons in 1926, making a total supply of distilled and electrolytic zinc in 1927 of about 633,000 tons, composed of 192,000 tons of high grade and intermediate, 71,000 tons of select and brass special, and 370,000 tons of prime Western zinc. Of the total output of primary zinc in 1927 about 117,000 tons were made in Oklahoma, 103,000 tons in Illinois, and 103,000 tons in Pennsylvania. The remainder was made in Arkansas, Indiana, Kansas, Montana, Texas, and West Virginia.

Figures published by the American Metal Market gave an average quoted price of 6.26 cents a pound for prime western zinc at St. Louis in 1927, as compared with an average selling price for all grades in 1926 of 7.5 cents. At the opening of the year the quotation was 6.975 cents a pound and the average quotation for December was 5.74 cents, with quotations of 5.625 to 5.65 cents a pound prevailing during the closing days of the year. The following are the average monthly prices on prime Western zinc at St. Louis, in cents a pound:

January	6.7	July	6.2
February	6.7	August	6.4
March	6.7	September	6.2
April	6.4	October	6.0
May	6.1	November	5.8
June	6.2	December	5.7

At the beginning of the year the price at Joplin of 60 per cent zinc concentrates was \$46 a ton. Prices began a downward trend from \$50 a ton in the latter part of September, 1926, and the decline was not halted until \$42 a ton was reached in the third week in January, 1927. After a recovery of \$3 a ton was made in the next few weeks, the price dropped to \$38 a ton in May. The price recovered in July to \$43 where it remained for a few weeks, followed by a steady

decline to \$35 a ton in November. After a slight recovery the price again receded to \$35 a ton, where it was at the end of the year.

ZIONISM. See **JEWS**.

ZONING. See **CITY PLANNING**.

ZOOLOGY. The American Society of Zoologists met at Nashville in the last week of December, in affiliation with Section F of the American Association for the Advancement of Science. The address before Section F was given by W. C. Curtis as retiring vice president. S. J. Holmes was president of the zoologists. The American Society of Naturalists met at the same time, under the presidency of C. E. McClung. The British Association for the Advancement of Science met at Leeds in the first week in September under the presidency of Sir Arthur Keith. The presidential address before Section D in zoology was made by Dr. Bidder. It was announced at the meeting that, by the gift of G. Buckston Browne, Darwin's cottage at Downe had been acquired as a permanent memorial to be held as the property of the nation. The tenth international Congress of Zoology was held at Budapest September 3 to 10 under the presidency of Professor Géza Horváth, and a summary of its proceedings appeared in *Nature* (vol. 120, p. 605).

Very little of taxonomic or morphological zoology appeared in the papers read, but the animal and all of its parts, down to the ultimate cell, were viewed in their functional rather than structural aspects. The theme seems to be to follow the organism as a living entity working in harmony with its environment.

EVOLUTION. As the presidential address at the meeting of the British Association for the Advancement of Science, Sir Arthur Keith summarized the evidence concerning the ancestral history of man (*Nature*, vol. 120, Sup., p. 14), and his relationships with the lower animals, going into the various lines of evidence such as blood tests, brain structure, etc. He asserted that the differences between the brain of man and that of the apes is entirely quantitative and in no sense qualitative. That there is still room for differences of opinion concerning the exact relationship between man and the apes is shown by the fact that Osborn and Gregory disagree fundamentally as to the time when the man line and the ape line separated. Osborn (*Science*, vol. 65, p. 481) declares that man has not descended from an arboreal animal but that the first man appeared during the Tertiary period, hundreds of thousands of years ago, in what he calls the Dawn Man stage. This Dawn Man belongs to a distinct family, the Hominidae, entirely unlike the Simiidae to which belong the apes. Man is and always has been a ground living animal, capable of tool making, living originally in relatively free country on the high plateaus and plains of northern Asia. Resemblances between the Hominidae and the Simiidae are due either to a very remote common ancestor or to convergence of the ape toward the human type. Psychologically man has a bipedal, dextrous, wide roaming disposition, while the ape has a quadrupedal, brachiating, tree-living psychology.

On the other hand, Gregory (*Science*, vol. 65, p. 601), states that the Dawn Man is an anachronism and that man is a close relative of the gorilla and the chimpanzee, in a group that, so far as is known, first appeared in the Oligo-

cene. The human foot contains unmistakable evidence that man is descended from an arboreal animal. Gregory thinks that as Osborn's work in paleontology has mostly been done on the hoofed mammals, where evolution has been extremely slow (it having probably taken 6,000,000 years to produce the differences between tapirs and horses), he fails to realize the plasticity and consequent rapid evolution of the members of the anthropoid group. Continuing his articles on speciation (see YEAR BOOK for 1926), Osborn (*Amer. Nat.*, vol. 61, p. 5), concludes that "speciation is a normal and continuous process; it governs the greater part of the origin of species and is apparently always adaptive. Mutation is an abnormal and irregular mode of origin which, while not infrequently occurring in nature, is not essentially an adaptive process; it is rather a disturbance of the regular course of speciation."

ECOLOGY. It is generally assumed that the first animals appeared in the oceans, and that fresh waters and land were populated from salt waters. Pearse (*Am. Nat.*, vol. 61, p. 466) agreed with this assumption, but stated that the problems as to the routes of migration from one of these localities to the other and the stimuli which started and continued the movements are not at all well understood. It seems probable that animals first left the salt water because fresh water offered better opportunities for food, for breeding and for safety. Efficient stimuli leading to land living might be lack of oxygen in small bodies of fresh water as well as the drying to which animals living under these conditions would be subjected. Allee (*Quar. Jour. of Biol.*, vol. 2, p. 367) discussed at some length the literature dealing with the subject of animal aggregations. Under this name may be grouped associations of various kinds, but the paper dealt especially with groups of free-living, motile animals that come into close physical contact but are not integrated into social units. Some of such aggregations are due merely to such reactions as are commonly grouped under the head of tropisms, the tropistic response being similar in different animals and thus tending to bring them together. In this case there is no social trait involved. Other factors producing aggregation are breeding, hibernation and aestivation, during which time many animals aggregate.

The effect of aggregations may be beneficial, as in cases where the animals cooperate in offensive or defensive activities, but may be deleterious owing to lack of food, accumulation of waste products, or to an as yet unexplained factor which interferes with reproduction when animals are living under crowded conditions. It is certain that in some cases aggregated animals are less susceptible to poisons than solitary ones. This may sometimes be due to a dilution of the poison so that each animal gets a very small dose, but there is some evidence that this result follows even in cases where each one of the aggregate actually gets more poison without injury, than did a solitary individual which succumbed to its effects. It would seem that there is some sort of a defensive secretion thrown off which in the aggregation protects its members from injury. The first step toward social life is the appearance of toleration for other animals in limited spaces. The first advance from this is made

when these groupings serve to protect at least some of the individuals; as, e.g., by securing a slower rate of moisture change, as has been shown to occur in grouped land isopods. The author queries whether the human family and all other sexual phenomena were not conditioned in their development by previous formation of aggregations which primarily had no sexual significance but possessed other survival value. In a later communication (*Biol. Bull.*, vol. 53, p. 301), Allee and Schuett discuss the relation of animal aggregations to definite poisons; in this case, colloidal silver. The results of experiments indicated that bunched individuals were less injured by the chemicals than were isolated ones, but the authors interpreted this to mean that in the bunch a smaller amount of toxic material must be removed by each individual to lower the threshold below toxicity than would be the case if each were isolated. The authors found no necessity for the assumption of an auto-protective substance given off by the animals, but considered the result due to some secretion such as surface slime, which adsorbed the poisonous materials. The results indicate that crowding is not necessarily a menace. It seems probable that the pioneers of an animal group first act on their environment so as to make it more favorable for themselves and their successors, but that an accumulation of this same material may be fatal to this group and prepare the way for an ecological succession.

TRANSMISSION (*Ecology*, vol. 8, p. 285) showed that the distribution of the Mexican bean beetle and the European corn borer in Ohio follow areas which in each case were originally occupied by definite types of forest. Climatic and environmental conditions determine the distribution and should make it possible to predict which areas in any state will be most apt to be affected by these insects. Hathaway (*Ecology*, vol. 8, p. 428), found that small freshwater fishes eat more in proportion to body weight than do large ones, and that all freshwater fish eat three times as much at a temperature of 20° as they do at one of 10°. There was no tendency to become acclimated even if this temperature extended over several weeks. Allee and Torvik (*Jour. of Ecol.*, vol. 15, p. 66), from a study of animal distribution in a Panamanian rain forest stream concluded that oxygen and the acidity of the water may be limiting factors in the distribution of animals, but are not at all the most important ones.

HEREDITY. In the fruit-fly *Drosophila* as well as in many other animals, two peculiar chromosomes, the X and the Y, have been identified as different from the remainder or "autosomes," and a considerable number of genes have been located in the X. Morgan believes that the Y carries no genes in the fruit fly but is "empty"; another observer (see YEAR BOOK for 1926) thought he located some genes in it. Castle (see YEAR BOOK for 1921) thought that he had located genes in the Y chromosome of the small fish *Lebistes*, this being the first recorded discovery of such location in that chromosome. Winge (*Jour. of Genet.*, vol. 18, p. 1) described experiments on heredity in *Lebistes reticulatus*, the results indicating that the X and the Y chromosome differ in that the Y carries a dominant male gene while X may have either a recessive female gene or no gene at all. These genes persist in their

location, while other genes may cross over from X to Y or from Y to X. The author describes nine newly discovered genes, which, added to those previously identified, makes eighteen genes for color marking in *Lebistes*. Nine of these are located on the Y and three on the X chromosome.

Stern (*Zeit. f. ind. Abst. u. Vererbung*, 44, p. 188) elaborated an earlier paper (see YEAR BOOK for 1926), giving detailed evidence for the presence in the Y chromosome of *Drosophila* of the gene for the allelomorph of the "bobbed" character. In general, the polled or hornless condition in cattle is a simple dominant over the horned. Smith (*Jour. of Heredity*, vol. 18, p. 365) recorded cases where a registered Aberdeen-Angus (polled) bull was mated with native cattle of Northern Rhodesia. All of the female offspring were polled, while most of the males had horns of some character, though some were polled. This he interprets as indicating that horns are inherited as a sex-limited character, appearing in the females only if duplex. In other matings polling is dominant. It would appear that one of these conditions may be altered into the other by action of one or more modifying factors. The author showed reason to believe that ancestrally the females were polled and the males horned, but that later the females acquired horns. When blood strains other than those of the commoner breeds are used, other factors appear which modify the normal mode of inheritance.

"Crossing over" of genes has been explained by Morgan as due to an interchange of chromosome material taking place during the intimate contact that exists between chromosomes during the maturation divisions, the most important evidence for this conclusion being derived from Johanssen's description of the chromosomes in the "chiasmatype" phase. McClung (*Quart. Review of Biology*, vol. 2, p. 344) reviewed Johanssen's work and compared it with his own extensive researches. His conclusion was that chromosomes are living, active, protoplasmic structures and may go through a wide range of activities during mitosis, but he could find little evidence that the peculiar events described by Johanssen, and forming the basis of Morgan's theory of crossing over, really occur.

An International Congress of Genetics was held in Berlin September 11 to 18, under the presidency of Professor S. Navashin. According to a report of the Congress in *Nature* (vol. 120, p. 495), the most important paper at the congress was read by Muller, on the production in *Drosophila* of mutations by the use of X-rays. Under normal conditions *Drosophila* produces mutations in the ratio of 1 to 1000 normal individuals, but in these experiments more mutations have appeared than in all the previously recorded work. It is important to note that among these such mutations as rudimentary, broad, and veinless wing, vermilion and white eye color—mutations, that is, which have been common in earlier cultures—appear, and that there has been an enormous increase in the number of lethal genes. A number of writers in various publications have called attention to the danger of producing, in this way, undesirable results in human beings, through the action on the germ cells of X-rays employed for experimental or therapeutic purposes. It is evidently desirable that in using X-rays the sex cells should be shielded from their action.

Goldschmidt, in *Physiologische Theorie der Vererbung*, argued that all mendelian genes are concerned fundamentally with rates of developmental processes, and the differences between allelomorphs can always be reduced to, and best thought of as, differences in such rates of action.

ANIMAL RHYTHMS. It is a common observation that many if not all, animal activities occur in definite rhythmical sequences. Discussing this matter, Richter (*Quart. Rev. of Biol.*, vol. 2, p. 307), stated that animal rhythms are carried on following internal stimuli and occur under uniform external stimulations. A definite example is the relation between bodily movements and the stomach contraction correlated with hunger sensations. Observations on the rat showed that these two movements coincide, contractions ceasing after feeding, to be repeated at regular intervals of from one to two hours. Similarly, in the female rat there is a four-day cycle, the females in a specially devised cage running eight to ten miles every fourth day and only a fraction of a mile on the three intervening days. This coincides with the oestrous cycle.

An interesting suggestion as to the origin of animal rhythms was made by Bidder in his presidential address to the section of zoology at the meeting of the British Association at Leeds. Referring to Allen's suggestion as to the origin of living matter (see YEAR BOOK for 1922) by a process of photo-synthesis, the first living organism being a flagellate, Bidder argued that this process of building up of protein is a discontinuous one, because if a particle containing 100 molecules acquires a composition of 101 molecules this must be a discontinuous process. The expansion of molecular volume means storage of energy. When energy is given up to form a new molecule, the old one returns to its original volume and thus a rhythmical pulsation is set up in the living protein. Protoplasm gels in contact with water, and in water of increased salinity the protoplasm would break through in the form of fine threads. One side of the thread would be more elastic than the other. An increase in volume would cause a bending of this thread, while a decrease would cause a return to the former condition, thus producing a regular rhythmic movement, similar in its detail to the movements of flagellae. The author would derive all of our sense of time rhythm from this regularly repeated rhythmic action in the primeval protein material. (*Nature*, vol. 100, p. 450.)

EXPERIMENTAL. If twins are born in cattle, one twin being male and the other female, it is known that the female will be sterile. Lillie demonstrated that, in this case, the male sex organs develop earlier than the female, and secrete some hormone which acts as a sterilizer on the female sex cells. Burns later thought that he had demonstrated a similar result in twin salamanders (*Amblystoma*) artificially produced by grafting together two individuals. Since the normal proportion of males to females is about equal, we would expect in these experimentally produced twins an equal number of similar sexed and of different sexed twins. In reality there was a large preponderance of similar ones, indicating that one sex had influenced the other. Witschi (*Biol. Bull.*, vol. 32, p. 137), repeated this experiment in *Rana* and found reason to believe that male and female determining factors appear at the same time, but

that the male is the stronger and can overpower the female.

PROTOZOA. The contractile vacuole of protozoa, with its regular rhythm of pulsation forcing liquid from the protoplasm out into the surrounding water, has been generally regarded as an excretory organ, removing nitrogenous wastes from the protoplasm. Miss Howland (see YEAR BOOK for 1924) was unable to demonstrate that this really is its function. Weatherby (*Biol. Bull.* 52, p. 208) found in *Paramacium caudatum* that both ammonia and urea develop in *Paramacium* cultures and that the ammonia is due to the hydrolysis of urea, the latter being the form in which the N leaves the body of the animal. Measurements of the amount of urea found in solutions in which *Paramacium* had been growing showed how great a concentration the urea would need to have in the fluid of the vacuoles if it were eliminated in that organ. Since micro-chemical tests failed to find urea in the vacuole (the postulated concentration was one that could easily have been recognized), Weatherby decided that urea is not eliminated in this way, but rather through the general surface of the body. The function of the vacuole is to regulate the hydrostatic pressure in the protoplasm. It is well to note in connection with this conclusion that the vacuole is absent from many marine protozoa, where owing to the concentration of the water outside the animal the need for hydrostatic regulation is not so great as in freshwater forms. Day (*Journal of Morph. and Physiol.*, vol. 44, p. 363), found that the contractile vacuole in amoeba is not a permanent structure but arises from other vacuoles which probably owe their origin to fusion and coalescence of ultra-microscopic drops of soluble waste. The wall of the vacuole is a condensation membrane. Day agrees with the other authors quoted above in concluding that at least a part of the function of the vacuole is to control osmotic gradients, though he thinks it may also have an excretory function.

Heilprin and Hopkins (*Biol. Bull.*, vol. 52, p. 411) recorded observations on *Amoeba proteus* indicating that its method of reproduction is by fragmentation into many small individuals, which later grow to full size, though divisions may occur from time to time during the growth process. Full-grown individuals isolated in filtered water would disappear, but in a short time numerous very small individuals appear in the water. This they interpret to mean that the original animal fragments into very minute forms which soon grow enough to be visible under the magnifications employed.

It is generally believed that encystment in protozoa is a protective device, following on unfavorable external conditions. Beers (*Jour. Morph. and Physiol.*, vol. 44, p. 21), found that in *Didinium* encystment occurs most frequently in a range between Ph 6.4 and Ph 8.4 which is also the most favorable growth range, while unfavorable concentrations of H ions are ineffective in inducing encystment.

The question of the function of the contractile vacuole is also discussed by Wolff (*Comptes Rend. Acad. Paris*, 185, p. 678) after studies of this organ in the genus *Hartmanella*, a freshwater form. The rapidity of pulsation of the vacuole bears a direct relation to the activity of the animal in general and is especially rapid on the approach of the time of encystment.

Hypertrophy of the vacuole, slowness of systole and irregularity of pulsation, are all symptoms of degeneration. Encystment is a dehydration process and this bears out the suggestion that the rôle of the vacuole is the regulation of water content. Having in mind experiments in which freshwater amoebae had been gradually acclimated to salt-water conditions, Wolff added various salts, as NaCl, KBr, $MgCl_2$, in varying degrees of concentration, to the water containing *Hartmanella* and found that, while traces of the vacuole might persist, there was no pulsation. These movements would return if the animal were again brought into water freed from this salt content.

Hood (*Biol. Bull.* 52, p. 79) studied the relation of *Frontonia* to its contained zoochlorellae. *Frontonia* with these inclusions requires a medium of a greater stagnation and putrefaction than if without them and may be freed from the zoochlorellae by being transferred from their natural medium to one of fresh spring water, or the number may be increased by an increasing degree of stagnation or putrefaction. With increase in the number of zoochlorellae is an increase in the number of H ions. Mizuno (*Science Reports, Tokoku Imp. Univ.*, 4th Ser., vol. 2, No. 4) stated that at a temperature of from 24 to 26° C *Paramacium* divides at intervals of eight or nine hours. After fission the animals increase in length but decrease in breadth, so that a comparison of sizes must be in terms of area.

COELENTERATES. Kepner and Jester (*Biol. Bull.* 52, p. 173) found that, if hydras are kept without food, the green species live longer than the brown, earlier observers having found no difference in this respect. It seems as if the green ones live at the expense of their contained zoochlorellae. Under conditions of extreme starvation the tentacles will be bitten off and digested by the entoderm of the animal, the greatest amount of digestion taking place in the entoderm of the tentacle base. The tentacles become reduced to mere stumps, but later they regenerate. It seems as if the greater amount of digestion in the tentacle bases is connected with the fact that later regeneration is carried on at this point. After this regeneration process, the whole animal is much smaller than it was at the beginning.

Protohydra, discovered in 1868, has been regarded as possibly a larval form. Koller (*Zool. Anz.* 73, p. 97), described one carrying an egg, thus demonstrating its adult condition. The egg is contained in the body cavity though probably derived from ectoderm.

NEMATODES. Zawadowsky and Orloff (*Archiv. f. Entwicklungsmechanik*, 100, p. 750) investigated the mechanisms by which self infection of the host is prevented in cases where intestinal parasites such as *Ascaris* are present. Eggs of this parasite fed to guinea pigs and rabbits passed unchanged through their alimentary canals. The authors concluded that these eggs cannot develop in the absence of oxygen and that lack of oxygen as well as the high temperature of the body in mammals prevents auto-infection. They argue that, since the eggs will grow in living tissues such as muscles, oxygen must be present there.

Van Cleave (*Jour. Am. Mic. Soc.*, vol. 46, p. 214), recorded the discovery of a cestode in the common otenophore, *Pleurobrachia*, from Woods Hole, this apparently being the first record of

such an occurrence in North America. Van Cleave was uncertain of the explanation, but suggested that the parasite was originally in a fish which had been eaten by the ctenophore. Perez (*Compt. Rend., Acad. Sci. Paris*, 185, p. 226), describes a *Nectonema* parasitic in a pagurid crustacean, and suggests that it has a life history similar to that of *Gordius*, only in this case the host is a crustacean rather than an insect.

ANNELIDS. In 1925 Reisinger described *Parerogodrilus heideri* n. gen. and n. sp. as a new archiannelid. Meyer (*Zool. Anz.* 72, p. 19), gave the result of a reexamination of the structure of the animal and a discussion of the homologies found by Reisinger. Meyer concluded that the animal is really an enchytreid. From the genealogical point of view, it may be characterized as an annelid which has lost the two first somites as well as all of those behind the female sex organs, and is thus a shortened form. Herpin (*Compt. Rend., Acad. Sci. Paris*, 185 (17) p. 869) described the incubation of the eggs of *Leptonereis glauca* Clap. by the female. This annelid swarms, but the male is much more abundant in the swarming than is the female, and apparently emits the sperm before he swarms. The female lays her eggs in a membranous tube, and remains near them, keeping up a rhythmic movement of her body. Herpin regards this as an intermediate form between those with an epitokous phase and those without it. McIntosh (*Ann. and Mag. Nat. Hist.* 13, p. 402) described in the operculum of *Mercierella enigmatica* an arrangement of blood vessels pointing to the functioning of this organ as a part of the respiratory system, and queries if in other cases the bodies described as ova in the operculum of serpulids may not be blood masses such as he found in this species. If this is the case, the operculum may be an important part of the respiratory system of the annelid.

In *Bouellia* the larva of the functional male becomes mature only if it lives for a time parasitically on the pharynx of the female. Baltzer (*Rev. Suisse Zool.* 33, p. 359) demonstrated that this differentiation is in part due to the absorption of materials from the tissues of the female, for extracts from either the dried pharynx or the intestine will produce the same effect as does the parasitic mode of life so far as concerns the typical loss of eyes, pigment and ciliated bands, though the treatment does not lead to formation of ripe sperm. Neutral larvae of the same age and from the same egg-laying show differences in responsiveness to this treatment as well as to the normal parasitic condition, and it may be that there are genetic differences in the larvae, some being male, others female and possibly others neutral.

MOLLUSCA. It has been an unsettled question whether hermaphroditic pond-snails, in the absence of cross-fertilization, reproduce by parthenogenesis or by self-fertilization. Crabb (*Biol. Bull.* 52, p. 67), reared *Lymnaea stagnalis apressa* Say, from eggs and was thus able to work with virgin individuals. He concluded that there is no reason to think that any form of parthenogenesis occurs and that they were all self-fertilized. Orton (*Jour. Mar. Biol. Ass.*, vol. 14, p. 967) demonstrated that after spawning female oysters suddenly change their sex and develop functional sperm. Evidently this occurs as a regular annual alternation, the functional maleness lasting for one or two months. Orton

suggests that this may be due to a metabolic rhythm, whereby the type characteristic of femaleness becomes the type characteristic of maleness. In another paper (*loc. cit.* p. 1047) he discusses the relation of this to the X chromosome theory of sex determination. The two are not incompatible, for we may assume that the chromosomes when present superimpose a metabolism of a particular type to which the gonad responds by producing either eggs or sperm. Some fundamental change in the rhythm of metabolism may cause a modification of this action, producing a reversal of sex.

INSECTA. Custer and Hicks (*Biol. Bull.*, vol. 52, p. 253) recorded observations on the nesting habits of two genera of bees. *Anthidium porteriae* does not excavate its own nests but takes possession of the burrows excavated by other insects. In one instance it was seen to drive away a wasp *Odynerus* and her nest. The nest is made of down from plants, and after the eggs are laid and provisioned the burrow is filled with pebbles to the surface of the ground. The nests are not made in close association with one another. *Dinathidium sayi* excavates its own nest, in one case being observed working on two nests alternately. This was also observed for the first time in a wasp *Spheg*. In *Dinathidium*, resin gathered from flowers is used in nest making. The female mates more than once.

Kennedy (*Jour. Morph. and Physiol.* 44, p. 267) discussed the exoskeleton as a factor in limiting the evolution of insects. The exoskeleton in insects has a threefold use: As armor, as protection against drying, and as a skeleton for the development of wings. It has conditioned a small size, thus opening up many limited environments and also conditioned a tracheal system, which speeds metabolism. What might be considered unfavorable limitations are small size, small nervous system, short life, inflexible societies, cold-bloodedness, loss of closed blood system, and a poor development of touch and hearing.

MAMMALS. In Technical Bulletin No. 21, U. S. Department of Agriculture, Bailey discusses the beaver, which he asserts can be profitably "farmed" in many parts of North America. The range where the animal should be easily established in any suitable swamp can be estimated pretty accurately by following the range of the poplar aspen tree. Klugh (*Jour. Mammalogy*, vol. 8, p. 1), discussed the ecology of the red squirrel, which is commonly supposed to kill and eat many nesting birds, as well as to do much damage to trees by nibbling the terminal buds of the twigs. Klugh considered that in both these respects the amount of damage done has been greatly exaggerated. *Nature* for Aug. 6, 1927, contained a note calling attention to a plague of "flying foxes," a species of bat, in Australia. They were reported as occurring in enormous numbers and doing much damage to crops, destroying more than they eat. The note asked for suggestions on combating the plague.

ZULULAND, 26°16'-land. A portion of the Province of Natal in Union of South Africa, to which it was annexed Dec. 30, 1897. Area, 10,427 square miles; population, in 1911, 219,606. There are extensive sugar plantations, the output of which in 1924-25 was 161,250 tons. See SOUTH AFRICA, UNION OF, for the statistics on Natal.
